

DIR-615 Wireless N 300 Router

BEFORE YOU BEGIN

Delivery Package

- Wireless router DIR-615
- Power adapter DC 12V/0.5A
- Ethernet cable (CAT 5E)
- "Quick Installation Guide" (brochure).

If any of the items are missing, please contact your reseller.

The "*User Manual*" and "*Quick Installation Guide*" documents in Russian and English are available on D-Link website (see <u>ftp.dlink.ru/pub/Router/DIR-615/Description/RevK/</u>).

Using a power supply with a different voltage rating than the one included will cause damage and void the warranty for this product.

Default Settings

| IP address of wireless router | 192.168.0.1 |
|---------------------------------|-------------|
| Username (login) | admin |
| Password | admin |
| Name of wireless network (SSID) | DIR-615 |

System Requirements and Equipment

- A computer with any operating system that supports a web browser.
- A web browser to access the web-based interface of the router: Windows Internet Explorer, Mozilla Firefox, or Opera.
- A NIC (Ethernet or Wi-Fi adapter) to connect to the router.
- An 802.11b, g, or n Wi-Fi adapter to create a wireless network.

CONNECTING TO PC

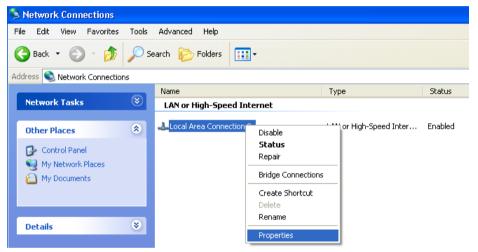

PC with Ethernet Adapter

- 1. Make sure that your PC is powered off.
- 2. Connect an Ethernet cable between any of LAN ports located on the back panel of the router and the Ethernet port of your PC.
- 3. Connect the power cord to the power connector port on the back panel of the router, then plug the power adapter into an electrical outlet or power strip.
- 4. Turn on the router by pressing the **ON/OFF** button on its back panel.
- 5. Turn on your PC and wait until your operating system is completely loaded.

Now you should configure your PC to obtain an IP address automatically (as DHCP client).

Obtaining IP Address Automatically in OS Windows XP

- 1. Click the Start button and proceed to the Control Panel > Network and Internet Connections > Network Connections window.
- 2. In the **Network Connections** window, right-click the relevant **Local Area Connection** icon and select the **Properties** line in the menu displayed.

3. In the Local Area Connection Properties window, on the General tab, select the Internet Protocol (TCP/IP) line. Click the Properties button.

4. Select the **Obtain an IP address automatically** and **Obtain DNS server address automatically** radio buttons. Click the **OK** button.

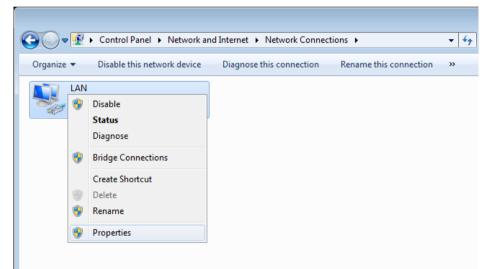

| Internet Protocol (TCP/IP) Prop | erties 🛛 🛛 🔀 | | | |
|---|-------------------|--|--|--|
| General Alternate Configuration | | | | |
| You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings. | | | | |
| Obtain an IP address automatication | lly | | | |
| Use the following IP address: — | | | | |
| IP address: | | | | |
| S <u>u</u> bnet mask: | | | | |
| Default gateway: | | | | |
| ⊙ D <u>b</u> tain DNS server address auto | matically | | | |
| OUse the following DNS server ac | idresses: | | | |

| | OK Cancel | | | |

5. Click the **OK** button in the connection properties window.

Now your computer is configured to obtain an IP address automatically.

Obtaining IP Address Automatically in OS Windows 7

- 1. Click the Start button and proceed to the Control Panel window.
- Select the Network and Sharing Center section. (If the Control Panel has the category view (the Category value is selected from the View by drop-down list in the top right corner of the window), choose the View network status and tasks line under the Network and Internet section.)
- 3. In the menu located on the left part of the window, select the **Change** adapter settings line.
- 4. In the opened window, right-click the relevant **Local Area Connection** icon and select the **Properties** line in the menu displayed.

 In the Local Area Connection Properties window, on the Networking tab, select the Internet Protocol Version 4 (TCP/IPv4) line. Click the Properties button. 6. Select the **Obtain an IP address automatically** and **Obtain DNS server address automatically** radio buttons. Click the **OK** button.

| Internet Protocol Version 4 (TCP/IPv4) | Properties ? | | | | |
|---|-------------------|--|--|--|--|
| General Alternate Configuration | | | | | |

| | OK Cancel | | | | |

7. Click the **OK** button in the connection properties window.

Now your computer is configured to obtain an IP address automatically.

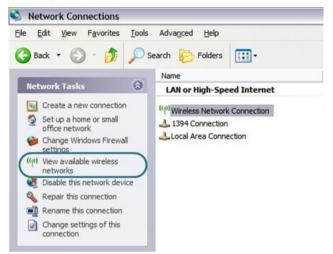

PC with Wi-Fi Adapter

- 1. Connect the power cord to the power connector port on the back panel of the router, then plug the power adapter into an electrical outlet or power strip.
- 2. Turn on the router by pressing the **ON/OFF** button on its back panel.
- 3. Turn on your PC and wait until your operating system is completely loaded.
- 4. Turn on your Wi-Fi adapter. As a rule, modern notebooks with built-in wireless NICs are equipped with a button or switch that turns on/off the wireless adapter (refer to your PC documents). If your PC is equipped with a pluggable wireless NIC, install the software provided with your Wi-Fi adapter.

Now you should configure your Wi-Fi adapter.

Configuring Wi-Fi Adapter in OS Windows XP

- 1. Click the Start button and proceed to the Control Panel > Network and Internet Connections > Network Connections window.
- 2. Select the icon of the wireless network connection and make sure that your Wi-Fi adapter is on.

- 3. Search for available wireless networks.
- 4. In the opened **Wireless Network Connection** window, select the wireless network **DIR-615** and click the **Connect** button.

After that the Wireless Network Connection Status window appears.

If you perform initial configuration of the router via Wi-Fi connection,

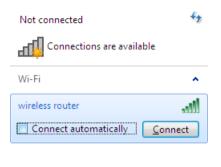

- note that immediately after changing the wireless default settings of the
- router you will need to reconfigure the wireless connection using the newly specified settings.

Configuring Wi-Fi Adapter in OS Windows 7

- 1. Click the Start button and proceed to the Control Panel window.
- 2. Select the **Network and Sharing Center** section. (If the Control Panel has the category view (the **Category** value is selected from the **View by** drop-down list in the top right corner of the window), choose the **View network status and tasks** line under the **Network and Internet** section.)
- 3. In the menu located on the left part of the window, select the **Change** adapter settings line.
- 4. In the opened window, select the icon of the wireless network connection and make sure that your Wi-Fi adapter is on.
- 5. To open the list of available wireless networks, select the icon of the wireless network connection and click the **Connect To** button or left-click the network icon in the notification area located on the right side of the taskbar.

6. In the opened window, in the list of available wireless networks, select the wireless network **DIR-615** and click the **Connect** button.

| Open Network and Sharing Center |
|---------------------------------|
|---------------------------------|

7. Wait for about 20-30 seconds. After the connection is established, the network icon will be displayed as the signal level scale.

If you perform initial configuration of the router via Wi-Fi connection, note that immediately after changing the wireless default settings of the

router you will need to reconfigure the wireless connection using the newly specified settings.

CONFIGURING ROUTER

Connecting to Web-based Interface

- 1. Start a web browser.
- 2. In the address bar of the web browser, enter the IP address of the router (by default, the following IP address is specified: **192.168.0.1**). Press the **Enter** key.

3. On the opened page, enter the username and password for the administrator account in the **Login** and **Password** fields correspondingly (by default, the following username and password are specified: admin, admin). Then click the **Enter** link.

| Authorization | |
|-------------------|-------------|
| Login admin | |
| Password ••••• | |
| | Enter Clear |

If the error "The page cannot be displayed" (or "Unable to display the

- page"/"Could not connect to remote server") occurs upon connecting to
- the web-based interface of the router, make sure that you have properly connected the router to your computer.

Right after the first access to the web-based interface you are forwarded to the page for changing the administrator password specified by default.

| Administrator password | | × |
|----------------------------|--------|--------|
| System password setting up | | |
| Password | | |
| Confirmation | | |
| | Save (| Cancel |

Enter a new password in the **Password** and **Confirmation** fields (you may use digits, Latin letters (uppercase and/or lowercase), and characters available on the keyboard), then click the **Save** link.

Remember or write down the new password for the administrator account. In case of losing the new password, you can access the settings of the router only after restoring the factory default settings via the hardware **RESET** button. This procedure wipes out all settings that you have configured for your router.

9 Model: Click'n'Connect Firmware version: Build time: Vendor D-Link Russia Support: Wi-Fi 80766c5bdcd09e22713c0cdf9ad372f44bbc1d27 Web revision: Firewall Connected; 192.168.161.224; WAN type: Virtual server settings wizard 00:90:4c:08:00:0d DIR-615 IP-tv IPTV settings wizard Quick settings Advanced settings

After successful registration the router's quick settings page opens.

The web-based interface of the router is multilingual. Select a needed language from the menu displayed when the mouse pointer is over the Language caption. You can change the language of the web-based interface in any menu item

After selecting the language, the notification on unsaved changes will be

displayed. Click the **Save** icon () to save the current language of the web-based interface as the default language.

The quick settings page displays general information on the router and its software (the version and the date of the firmware, the IP address of the device, the name of the WLAN, etc.).

On the quick settings page, you can quickly get to some pages of the webbased interface or run a needed Wizard (use the links on the left side of the page).

From the quick settings page you can switch to the advanced settings section. To do this, click the **Advanced settings** link in the bottom right corner of the page.

Also you can find a specific page via search. To do this, enter the name of the page, wholly or partly, in the search bar in the top part of the web-based interface page, and then select a needed link in the search results.

Configuring Connection to the Internet

You should configure your WAN connection in accordance with data

provided by your Internet service provider (ISP). Make sure that you, have obtained all necessary information prior to configuring your connection. Otherwise contact your ISP.

Configuring WAN Connection

- 1. Go to the **Net** / **WAN** page, select the **WAN** connection and click the **Delete** button.
- 2. Click the **Add** button.
- 3. In the **General settings** section, select a needed value from the **Connection Type** drop-down list.
- 4. From the **Port** drop-down list, select the **Internet** value.
- 5. Specify a name for your connection (any name for easier identification) in the **Name** field.

| General settings | | |
|------------------|------------|---|
| Connection Type: | PPPoE | - |
| Port: | Internet 💌 | |
| Name:* | 1 | |
| Enable: | | |
| Direction: | WAN | |

6. If your ISP uses MAC address binding, in the **Ethernet** section, in the **MAC** field, enter the MAC address registered by your ISP upon concluding the agreement. To set the MAC address of the network interface card (of the computer that is being used to configure the router at the moment) as the MAC address of the WAN interface, click the

Clone MAC Address button (). To set the address of a device connected to the router's LAN at the moment, select the relevant value from the drop-down list (the field will be filled in automatically).

| Ethernet | | | |
|----------|--------|-----|--|
| MTU:* | 2 1500 | | |
| MAC: | Z | ▼ 🖨 | |

7. *For connection of PPPoE type:* in the **PPP** section, enter authorization data provided by your ISP (the username (login) in the **Username** field and the password in the **Password** and **Password confirmation** fields), or select the **Without authorization** checkbox if authorization is not required.

| PPP | | |
|-------------------------|---|--|
| Jsemame:* | 2 | |
| Without authorization: | | |
| Password:* | 1 | |
| Password confirmation:* | 1 | |

8. *For connection of Static IP type*: in the **IP** section, fill in the **IP** Address, Netmask, Gateway **IP** address, and Primary DNS server fields.

| IP | | |
|-----------------------|---|--|
| IP Address:* | 2 | |
| Netmask:* | 2 | |
| Gateway IP address:* | 2 | |
| Primary DNS server.* | | |
| Secondary DNS server: | | |

 For connection of Dynamic IP type: if your ISP has provided the address of the DNS server, in the IP section, deselect the Obtain DNS server addresses automatically checkbox and fill in the Primary DNS server field.

| IP | | |
|--|---|--|
| Obtain DNS server addresses automatically: | | |
| Primary DNS server.* | | |
| Secondary DNS server: | 2 | |
| Vendor ID: | | |
| | | |

10. For connection of PPTP + Static IP or L2TP + Static IP type: in the IP section, fill in the IP Address, Netmask, Gateway IP address, and Primary DNS server fields. Then in the VPN section, enter authorization data provided by your ISP (the username (login) in the Username field and the password in the Password and Password confirmation fields), or select the Without authorization checkbox if authorization is not required. In the VPN server address field, enter the IP or URL address of the PPTP or L2TP authentication server. If your ISP applies encryption, select a needed value from the Encryption drop-down list.

| IP | | |
|-------------------------|------------|--|
| IP Address:* | | |
| Netmask:* | | |
| Gateway IP address:* | 2 | |
| Primary DNS server:* | 2 | |
| Secondary DNS server: | | |
| | | |
| VPN | | |
| Connect automatically: | V | |
| Username:* | 2 | |
| Without authorization: | | |
| Password:* | | |
| Password confirmation:* | 2 | |
| VPN server address:* | 2 | |
| Encryption: | No encrypt | |

11. For connection of PPTP + Dynamic IP or L2TP + Dynamic IP type: if your ISP has provided the address of the DNS server, in the IP section, deselect the Obtain DNS server addresses automatically checkbox and fill in the Primary DNS server field. Then in the VPN section, enter authorization data provided by your ISP (the username (login) in the Username field and the password in the Password and Password confirmation fields), or select the Without authorization checkbox if authorization is not required. In the VPN server address field, enter the IP or URL address of the PPTP or L2TP authentication server. If your ISP applies encryption, select a needed value from the Encryption drop-down list.

| IP | |
|--|------------|
| Obtain DNS server addresses automatically: | |
| Primary DNS server:* | |
| Secondary DNS server: | |
| Vendor ID: | 2 |
| | |
| VPN | |
| Connect automatically: | |
| Username:* | 2 |
| Without authorization: | |
| Password:* | |
| Password confirmation:* | |
| VPN server address:* | 2 |
| Encryption: | No encrypt |

- 12. If needed, fill in other fields on the page in accordance with data provided by the ISP.
- 13. Click the **Save** button.

Configuring User Tunnel

Create your WAN connection in accordance with data provided by your ISP. Then create a connection of the PPTP or L2TP type.

- 1. Go to the **Net / WAN** page and click the **Add** button.
- 2. From the **Connection Type** drop-down list, select the needed value.
- 3. Make sure that the **auto** value is selected from the **Port** drop-down list.
- 4. Specify a name for your connection (any name for easier identification) in the **Name** field.

| General settings | | |
|------------------|--------|---|
| Connection Type: | РРТР | - |
| Port: | auto 💌 | |
| Name:* | | |
| Enable: | | |
| Direction: | WAN | |

5. In the VPN section, enter authorization data to connect to a remote server (the username (login) in the Username field and the password in the Password and Password confirmation fields), or select the Without authorization checkbox if authorization is not required. In the VPN server address field, enter the IP or URL address of the PPTP or L2TP authentication server.

| VPN | | |
|-------------------------|---|--|
| Connect automatically: | | |
| Username:* | 1 | |
| Without authorization: | | |
| Password:* | 2 | |
| Password confirmation:* | 2 | |
| VPN server address:* | 1 | |

6. Click the **Save** button.

Example of Connection via VLANs

If your ISP provides:

- access to the Internet via the VLAN with the tag (VLAN ID) 2, the **PPPoE** connection type, the login **user**, and the password **user_password**,
- access to IPTV service via the VLAN with the tag (VLAN ID) 10,
- access to IP telephony via the VLAN with the tag (VLAN ID) 20,

and your set-top box is connected to the LAN port 3, your VoIP phone is connected to the LAN port 4 of the router, then follow the next steps to configure the router.

- 1. Go to the **Net / WAN** page, select the **WAN** connection and click the **Delete** button on the opened page.
- 2. Go to the **Advanced / VLAN** page.
- 3. Select the **lan** group.
- 4. Select the line **port3** in the table at the bottom of the page and click the **Delete port** button.
- 5. Select the line **port4** and click the **Delete port** button.
- 6. Click the **Save changes** button.
- 7. Select the **wan** group.
- 8. In the **Name** field, enter a name for the group (**INTERNET**).
- 9. From the **Type** drop-down list, select the **NAT** value.
- 10. From the **Port** drop-down list, select the value **internet** (corresponds to the INTERNET port of the router).
- 11. From the **Tag** drop-down list, select the **tagged** value.
- 12. In the **VLAN ID** field, enter **2**.
- 13. Click the **Save changes** button.

You have created the group of ports for connection to the Internet.

- 14. Click the **Add** button.
- 15. In the **Name** field, enter a name for the new group (**IPTV**).
- 16. From the **Type** drop-down list, select the **Transparent** value.
- 17. From the **Port** drop-down list, select the value **port3**.
- 18. From the Tag drop-down list, select the untagged value.
- 19. From the **Port** drop-down list, select the value **internet**.
- 20. From the **Tag** drop-down list, select the **tagged** value.
- 21. In the VLAN ID field, enter 10.
- 22. Click the **Save changes** button.

You have created the group of ports for IPTV service.

- 23. Click the Add button.
- 24. In the **Name** field, enter a name for the new group (**VOIP**).
- 25. From the **Type** drop-down list, select the **Transparent** value.
- 26. From the **Port** drop-down list, select the value **port4**.
- 27. From the Tag drop-down list, select the untagged value.
- 28. From the **Port** drop-down list, select the value **internet**.
- 29. From the **Tag** drop-down list, select the **tagged** value.
- 30. In the VLAN ID field, enter 20.
- 31. Click the **Save changes** button.

You have created the group of ports for access to IP telephony.

| Creating and editing | Creating and editing VLANs | | | | |
|----------------------|----------------------------|-------------------------------------|---------|--------|--|
| Name | Туре | Ports | VLAN ID | Enable | |
| lan | Local | port1 (U) port2 (U) wifi1 (U) | | Yes | |
| INTERNET | NAT | internet (T) | 2 | Yes | |
| IPTV | Transparent | internet (T) port3 (U) | 10 | Yes | |
| VOIP | Transparent | internet (T) port4 (U) | 20 | Yes | |

32. Click the **Save&Reboot** line in the top-page menu displayed when the mouse pointer is over the **System** caption.

- 33. Log into the web-based interface and go to the Net / WAN tab.
- 34. Click the **Add** button.
- 35. On the opened page, select the **PPPoE** value from the **Connection Type** drop-down list.
- 36. From the **Port** drop-down list, select the value **Internet.2**.
- 37. In the **Username** field, enter **user**.
- 38. Deselect the Without authorization checkbox.
- 39. In the **Password** and **Password confirmation** fields, enter **user_password**.
- 40. Click the **Save** button.

Configuring Local Area Network

 Go to the Net / LAN page. If needed, change the IP address of the router's LAN interface and the mask of the local subnet in the IP Address and Netmask fields. Then click the Save button.

2. By default, the DHCP server of the router is enabled. In the **DHCP server** section, you can change the parameters of the DHCP server. If you want to manually assign IP addresses to devices of your LAN, disable the DHCP server (select the **Disable** value from the **Mode** drop-down list).

| DHCP server | | |
|--------------------|-----------------|--|
| Mode: | Enable 🔻 | |
| DNS Relay: | | |
| Start IP:* | / 192.168.0.2 | |
| End IP:* | / 192.168.0.100 | |
| Lease time (min):* | ₹ 86400 | |

3. After specifying the DHCP server settings, click the **Save** button.

Configuring Wireless Network

By default, the wireless network of the router is open (it requires no password to access it). To avoid unauthorized access to your wireless local area network, change the default settings of the router.

Example of Wireless Settings

- 1. Go to the Wi-Fi / Security settings page.
- 2. Select the **WPA2-PSK** value from the **Network Authentication** dropdown list.

| Network Authentication: | WPA2-PSK | |
|--------------------------|----------|---|
| Encryption Key PSK: | 2 | 1 |
| WPA2 Pre-authentication: | | |
| WPA Encryption set | ttings | |
| WPA Encryption: | AES 🗸 | |
| WPA reneval:* | 2 3600 | |
| | | |

- 3. Enter a key (a password that will be used to access your wireless network) in the **Encryption Key PSK** field. Use digits and Latin characters.
- 4. Select the **AES** value from the **WPA Encryption** drop-down list.
- 5. Click the **Change** button.

If you perform initial configuration of the router via Wi-Fi connection,

- note that immediately after changing the wireless default settings you
- will need to reconfigure the wireless connection using the newly specified settings.

Saving Settings to Non-volatile Memory

In order to avoid losing the new settings upon hardware reboot (accidental or intentional power-off of the device), it is recommended to save the settings to the non-volatile memory of the router.

Click the **Save&Reboot** line in the top-page menu displayed when the mouse pointer is over the **System** caption.

Wait until the router is rebooted. Now you can use it to access the Internet or access the web-based interface of the router to configure additional parameters. For detailed description of every page of the web-based interface, see the "*User Manual*" document (<u>ftp.dlink.ru/pub/Router/DIR-615/Description/RevK/</u>).

TECHNICAL SUPPORT

You can find software updates and user documentation on our website.

D-Link provides its customers with free support within the product's warranty period.

Customers can contact the technical support group by phone or by e-mail/Internet.
