## CHAPTER 1. INTRODUCTION

### **Contents and Audience**

This manual describes the router DIR-620 and explains how to configure and operate it.

This manual is intended for users familiar with basic networking concepts, who create an in-home local area network, and system administrators, who install and configure networks in offices.

### Conventions

Example	Description
text	The body text of the manual.
Before You Begin	A reference to a chapter or section of this manual.
"Quick Installation Guide"	A reference to a document.
Change	A name of a menu, menu item, control (field, checkbox, drop-down list, button, etc.).
192.168.0.1	Data that you should enter in the specified field.
Information	An important note.

### **Document Structure**

*Chapter 1* describes the purpose and structure of the document.

*Chapter 2* gives an overview of the router's hardware and software features, describes its appearance and the package contents.

*Chapter 3* explains how to install the router DIR-620 and configure a PC in order to access its webbased interface.

Chapter 4 describes all pages of the web-based interface in detail.

*Chapter 5* includes safety instructions and tips for networking and connecting additional equipment.

Chapter 6 introduces abbreviations and acronyms used in this manual.

## CHAPTER 2. OVERVIEW

### **General Information**

The DIR-620 device is a multifunction wireless router supporting WiMAX, 3G GSM and CDMA with a built-in switch. It provides a fast and simple way to create a wireless and wired network at home or in an office.

The router is equipped with a USB port for connecting a USB modem<sup>1</sup>, which can be used to establish connection to the Internet. In addition, to the USB port of the router you can connect a USB storage device, which will be used as a network drive, or a printer.

Also you are able to connect the multifunction wireless router DIR-620 to a cable or DSL modem or to a private Ethernet line and use a high-speed Internet connection to successfully fulfill a wide range of professional tasks. The built-in 4-port switch enables you to connect Ethernet-enabled computers, game consoles, and other devices to your network.

Using the DIR-620 device, you are able to quickly create a wireless network at home or in your office, which lets your relatives or employees connect to your wireless network virtually anywhere (within the operational range of your wireless network). The router can operate as a base station for connecting wireless devices of the standards 802.11b, 802.11g, and 802.11n (at the rate up to 300Mbps).

The router supports multiple functions for the wireless interface: several security standards (WEP, WPA/WPA2), MAC address filtering, WPS, WMM.

The multifunction wireless router DIR-620 includes a built-in firewall. The advanced security functions minimize threats of hacker attacks, prevent unwanted intrusions to your network, and block access to unwanted websites for users of your LAN.

You can configure and manage the settings of the multifunction wireless router DIR-620 via the user-friendly web-based interface (the interface is available in several languages).

<sup>1</sup> Not included in the delivery package. D-Link does not guarantee compatibility with all USB modems. Please, refer to the *Supported USB Modems* section, page 198.

### Specifications<sup>\*</sup>

#### WAN Interface:

• 1 10/100BASE-TX Ethernet port for cable or DSL modem or private Ethernet line.

#### LAN Interface:

• 4 10/100BASE-TX Ethernet ports.

### WLAN Interface:

• IEEE 802.11b/g/n.

#### **USB Interface:**

• USB 2.0 type A port for USB modem, storage, or printer.

#### **Network Functions:**

- WAN connection types:
  - 3G
  - PPPoE
  - Static IP
  - Dynamic IP
  - PPTP/L2TP
  - PPTP/L2TP + Static IP
  - PPTP/L2TP + Dynamic IP
- Support of IEEE 802.1X for Internet connection
- DHCP server and client
- DNS relay
- VPN pass-through (PPTP/L2TP)
- Dynamic DNS
- Static IP routing
- Remote management
- Network statistics for each interface
- IGMP Proxy
- RIP
- UPnP

<sup>\*</sup> The device features are subject to change without notice. For the latest versions of the firmware and relevant documentation, visit <u>www.dlink.ru</u>.

- Support of VLAN
- WAN ping respond.

#### USB Modem<sup>2</sup>:

- Auto connection to available type of supported network (3G/2G)
- Enabling/disabling PIN code check, changing PIN code.

#### **USB Storage:**

- Built-in FTP server
- Print server
- Access to storage via accounts
- Access control (for ext2/3 file systems).

#### Wireless Connection:

- Supported security settings:
  - WEP
  - WPA/WPA2 Personal
  - WPA/WPA2 Enterprise
- MAC filter
- Managing connected stations
- PIN and PBC methods of WPS
- WMM (Wi-Fi QoS)
- Advanced settings
- Support of client mode.

#### **Torrent Client:**

• Uploading/downloading files from/to USB storage.

#### **Firewall Functions:**

- Network Address Translation (NAT)
- Stateful Packet Inspection (SPI)
- IP filters
- URL filter
- MAC filter
- DMZ

<sup>2</sup> The listed functions are available for GSM USB modems only.

- Prevention of ARP and DDoS attacks
- Virtual servers.

#### **Configuration and Management:**

- Multilingual web-based interface for configuration and management
- Access via TELNET
- Firmware update via web-based interface
- Saving/restoring configuration to/from file
- Support of remote logging
- Automatic synchronization of system time with NTP server
- Ping function
- Traceroute utility.

#### LEDs:

- Power
- Internet
- WLAN
- 4 LAN LEDs
- WPS.

#### **Power:**

- External power adapter DC 5V/2.5A
- Reset to Factory Defaults button.

#### **Operating Temperature:**

• from 0 to 40  $^{\circ}$ C (from 32 to 104  $^{\circ}$ F).

#### **Storage Temperature:**

• from -20 to 65 °C (from -4 to 149 °F).

#### **Operating Humidity:**

• from 10% to 90% non-condensing.

#### **Storage Humidity:**

• from 5% to 95% non-condensing.

### **Product Appearance**

### Front Panel and Right Side Panel

Figure 1. Front panel view.

LED	Mode	Description		
	Solid green	The router is powered on.		
Power	No light	The router is powered off.		
	Solid yellow	When powered on: the router is being loaded; when loaded: a malfunction of the router.		
	Solid green	The Internet connection is on.		
Internet	Blinking green	The WAN interface is active (upstream or downstream traffic).		
	Solid yellow	The Internet connection is off.		
	Solid green	The router's WLAN is on.		
WLAN	Blinking green	The WLAN interface is active (upstream or downstream traffic).		
LAN 1-4	Solid green	A device (computer) is connected to the relevant port, the connection is on.		
	Blinking green	The LAN port is active (upstream or downstream traffic).		

In addition, a port for connecting a USB modem is located on the front panel of the router (the USB port).

The **WPS** button located on the right side panel of the router is designed to quickly add wireless devices to the router's WLAN. A separate LED is located on the **WPS** button.

Mode	Description
Blinking blue	Attempting to add a wireless device via the WPS function.
Solid blue	The wireless device is connected to the router's WLAN (lights for several minutes).
Solid yellow	Failed to add the wireless device via the WPS function or the WPS function is not used and a USB modem is connected to the router.

### **Back Panel**

Figure 2. Back panel view.

Port	Description
LAN 1-4	4 Ethernet ports to connect computers or network devices.
INTERNET	A port to connect to a cable or DSL modem or to a private Ethernet line (it is recommended to use the cable included in the delivery package).
5V-2.5A	Power connector.
RESET	A button to restore the factory default settings. To restore the factory defaults, push the button (with the device turned on), hold it for 10 seconds, and then release the button.

### **Delivery Package**

The following should be included:

- Wireless router DIR-620
- Power adapter 5V/2.5A
- Ethernet cable (CAT 5E)
- "Quick Installation Guide" (brochure).

The "*User Manual*" and "*Quick Installation Guide*" documents in Russian and English are available on D-Link website (see <u>ftp.dlink.ru/pub/Router/DIR-620/Description/RevA/1\_4\_0/</u>).

<u>Using a power supply with a different voltage rating than the one included will cause</u> damage and void the warranty for this product.

## CHAPTER 3. INSTALLATION AND CONNECTION

## Before You Begin

Please, read this manual prior to installing the device. Make sure that you have all the necessary information and equipment.

### **Operating System**

Configuration of the multifunction wireless router DIR-620 supporting WiMAX, 3G GSM and CDMA with a built-in switch (hereinafter referred to as "the router") is performed via the built-in web-based interface. The web-based interface is available from any operating system that supports a web browser.

#### Web Browser

The following web browsers are recommended: Windows Internet Explorer, Mozilla Firefox, or Opera.

For successful operation, JavaScript should be enabled on the web browser. Make sure that JavaScript has not been disabled by other software (such as virus protection or web user security packages) running on your computer.

### Wired or Wireless NIC (Ethernet or Wi-Fi Adapter)

Any computer that uses the router should be equipped with an Ethernet or Wi-Fi adapter (NIC). If your computer is not equipped with such a device, install an Ethernet or Wi-Fi adapter prior to using the router.

#### Wireless Connection

Wireless workstations from your network should be equipped with a wireless 802.11b, g, or n NIC (Wi-Fi adapter). In addition, you should specify the values of SSID, channel number and security settings defined in the web-based interface of the router for all these wireless workstations.

### **USB Modem**

To connect to a WiMAX, 3G GSM or CDMA network, you should use a USB modem. Connect it to the USB port of the router, then access the web-based interface of the router, and you will be able to configure a connection to the Internet<sup>3</sup>.

### WiMAX USB modem

Some WiMAX operators require subscribers to activate their WiMAX USB modems prior to using them. Please, refer to connection guidelines provided by your operator when concluding the agreement or placed on its website.

### <u>3G USB modem</u>

Your USB modem should be equipped with an active identification card (SIM or R-UIM) of your operator.

For CDMA USB modems, it is required to disable the PIN code check on the identification card prior to connecting the USB modem to the router.

<sup>3</sup> Contact your operator to get information on the service coverage and fees.

### Connecting to PC

### **PC with Ethernet Adapter**

- 1. Make sure that your PC is powered off.
- 2. Connect an Ethernet cable between any of LAN ports located on the back panel of the router and the Ethernet port of your PC.
- 3. To connect via a WiMAX, 3G GSM or CDMA network: connect your USB modem to the USB port<sup>4</sup> located on the front panel of the router.

- 4. Connect the power cord to the power connector port on the back panel of the router, then plug the power adapter into an electrical outlet or power strip.
- 5. Turn on your PC and wait until your operating system is completely loaded.

### **Obtaining IP Address Automatically in OS Windows XP**

- 1. Click the Start button and proceed to the Control Panel > Network and Internet Connections > Network Connections window.
- 2. In the **Network Connections** window, right-click the relevant **Local Area Connection** icon and select the **Properties** line in the menu displayed.

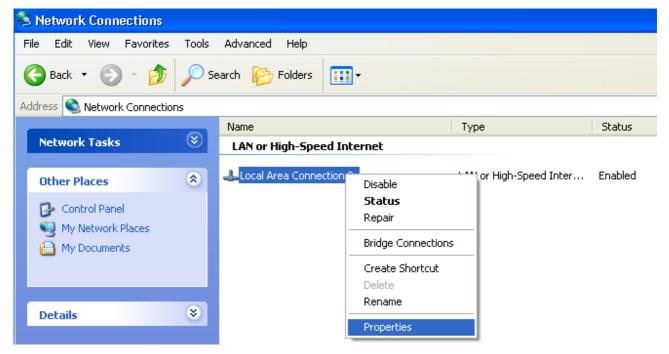

Figure 3. The Network Connections window.

If you need to connect or change a USB modem to another one when the router is powered on, power off the router, connect the modem to the USB port, and power on the router.

<sup>4</sup> It is recommended to use a USB extension cable to connect a USB modem to the router.

3. In the Local Area Connection Properties window, on the General tab, select the Internet Protocol (TCP/IP) line. Click the Properties button.

7. Click the **OK** button in the connection properties window.

Now your computer is configured to obtain an IP address automatically.

### PC with Wi-Fi Adapter

1. To connect via a WiMAX, 3G GSM or CDMA network: connect your USB modem to the USB port<sup>5</sup> located on the front panel of the router.

If you need to connect or change a USB modem to another one when the router is powered on, power off the device, connect the modem to the USB port, and power on the router.

- 2. Connect the power cord to the power connector port on the back panel of the router, then plug the power adapter into an electrical outlet or power strip.
- 3. Turn on your PC and wait until your operating system is completely loaded.
- 4. Turn on your Wi-Fi adapter. As a rule, modern notebooks with built-in wireless NICs are equipped with a button or switch that turns on/off the wireless adapter (refer to your PC documents). If your PC is equipped with a pluggable wireless NIC, install the software provided with your Wi-Fi adapter.

<sup>5</sup> It is recommended to use a USB extension cable to connect a USB modem to the router.

### **Configuring Wi-Fi Adapter in OS Windows XP**

- 1. Click the Start button and proceed to the Control Panel > Network and Internet Connections > Network Connections window.
- 2. Select the icon of the wireless network connection and make sure that your Wi-Fi adapter is on.

Figure 11. The Network Connections window.

- 3. Search for available wireless networks.
- In the opened Wireless Network Connection window, select the wireless network DIR-620 and click the Connect button.

After that the Wireless Network Connection Status window appears.

If you perform initial configuration of the router via Wi-Fi connection, note that immediately after changing the wireless default settings of the router you will need to reconfigure the wireless connection using the newly specified settings.

### **Configuring Wi-Fi Adapter in OS Windows 7**

- 1. Click the Start button and proceed to the Control Panel window.
- 2. Select the **Network and Sharing Center** section. (If the Control Panel has the category view (the **Category** value is selected from the **View by** drop-down list in the top right corner of the window), choose the **View network status and tasks** line under the **Network and Internet** section.)

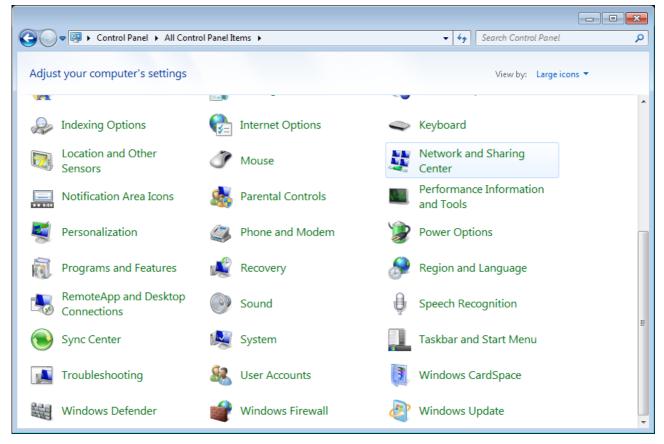

Figure 12. The Control Panel window.

- 3. In the menu located on the left part of the window, select the **Change adapter settings** line.
- 4. In the opened window, select the icon of the wireless network connection and make sure that your Wi-Fi adapter is on.
- 5. To open the list of available wireless networks, select the icon of the wireless network connection and click the **Connect To** button or left-click the network icon in the notification area located on the right side of the taskbar.

Figure 13. The notification area of the taskbar.

6. In the opened window, in the list of available wireless networks, select the wireless network **DIR-620** and click the **Connect** button.

Open Network and Sharing Center

Figure 14. The list of available networks.

7. Wait for about 20-30 seconds. After the connection is established, the network icon will be displayed as the signal level scale.

If you perform initial configuration of the router via Wi-Fi connection, note that immediately after changing the wireless default settings of the router you will need to reconfigure the wireless connection using the newly specified settings.

### Connecting to Web-based Interface

When you have configured your computer, you can access the web-based interface and configure needed parameters (create a WAN connection, change the parameters of the wireless network, specify the settings of the firewall, etc.).

- 1. Start a web browser (see the *Before You Begin* section, page 13).
- 2. In the address bar of the web browser, enter the IP address of the router (by default, the following IP address is specified: **192.168.0.1**). Press the **Enter** key.

Figure 15. Connecting to the web-based interface of the DIR-620 device.

3. On the opened page, enter the username and password for the administrator account in the **Login** and **Password** fields correspondingly (by default, the following username and password are specified: admin, admin). Then click the **Enter** link.

Authorization	
Login admin	
Password	
	Enter Clear

Figure 16. The login page.

If the error "*The page cannot be displayed*" (or "*Unable to display the page*"/"*Could not*. *connect to remote server*") occurs upon connecting to the web-based interface of the router, make sure that you have properly connected the router to your computer. Right after the first access to the web-based interface you are forwarded to the page for changing the administrator password specified by default.

Administrator password	×
System password setting up	
Password	
Confirmation	
	Save Cancel

Figure 17. The page for changing the default administrator password.

Enter a new password in the **Password** and **Confirmation** fields (you may use digits, Latin letters (uppercase and/or lowercase), and characters available on the keyboard), then click the **Save** link.

Remember or write down the new password for the administrator account. In case of losing the new password, you can access the settings of the router only after restoring the factory default settings via the hardware **RESET** button. This procedure wipes out all settings that you have configured for your router.

### Web-based Interface Structure

Quick search		٩
Net Clicktn'Connect Wi-Fi Wireless network settings wizard	<b>Device information</b> Model: Firmware version: Build time: Vendor: Support: Summary: Web revision:	DIR-620 <u>1.4.0</u> Mon Jul 23 16:49:59 MSK 2012 D-Link Russia support@dlink.ru Root filesystem image for DIR-620 8b353653365a28f14a4632c061d23dd323dd919f

IP-tv IPTV settings wizard		
		Quick settings Advanced settings Search

After successful registration the router's quick settings page opens.

Figure 18. The quick settings page.

The web-based interface of the router is multilingual. Select a needed language from the menu displayed when the mouse pointer is over the **Language** caption. You can change the language of the web-based interface in any menu item.

Figure 19. Changing the language of the web-based interface.

After selecting the language, the notification on unsaved changes will be displayed. Click the **Save** 

icon ( $\mathbf{H}$ ) to save the current language of the web-based interface as the default language.

The quick settings page displays general information on the router and its software (the version and the date of the firmware, the IP address of the device, the name of the WLAN, etc.).

On the quick settings page you can run a needed Wizard, quickly get to some pages of the webbased interface, search for a specific page, or switch to the advanced settings section.

To upgrade the firmware of the router, left-click the current firmware version (the right column of the **Firmware version** line). After clicking the line, the **System / Firmware upgrade** page opens (for the detailed description of the page, see the *Firmware Upgrade* section, page 190).

To contact the technical support group (to send an e-mail), left-click the support e-mail address (the right column of the **Support** line). After clicking the line, the e-mail client window for sending a new letter to the specified address opens.

To edit the router's local interface parameters, left-click the IP or MAC address of the local interface (the right column of the **LAN IP** line or **LAN MAC** line correspondingly). After clicking the line, the page for editing the LAN interface opens (for the detailed description of the page, see the *LAN* section, page 123).

To configure the router's WLAN parameters, left-click the SSID of the WLAN (the right column of the **SSID** line). After clicking the line, the **Wi-Fi** / **Basic settings** page opens (for the detailed description of the page, see the *Basic Settings* section, page 127).

To configure connection to the Internet, click the **Click'n'Connect** link in the **Net** section (for the detailed description of the Wizard, see the *Click'n'Connect* section, page 35).

To configure the router's wireless network, click the **Wireless network settings wizard** link in the **Wi-Fi** section (for the detailed description of the Wizard, see the *Wireless Network Settings Wizard* section, page 79).

To configure access from the Internet to a web server located in your LAN, click the **Virtual server settings wizard** link in the **Firewall** section (for the detailed description of the Wizard, see the *Virtual Server Settings Wizard* section, page 87).

To configure the router to use an IPTV set-top box, click the **IPTV settings wizard** link in the **IP-tv** section (for the detailed description of the Wizard, see the *IPTV Settings Wizard* section, page 88).

To configure all parameters of the router independently without the Wizards, click the **Advanced settings** link in the bottom right corner of the page.

Figure 20. The advanced settings page.

The pages of the **Status** section display data on the current state of the router (for the description of the pages, see the *Status* section, page 89).

The pages of the **Net** section are designed for configuring basic parameters of the LAN interface of the router and creating a connection to the Internet (for the description of the pages, see the *Net* section, page 93).

The pages of the **Wi-Fi** section are designed for specifying all needed settings of the router's wireless network (for the description of the pages, see the *Wi-Fi* section, page 126). Also you can enable or disable the device's WLAN directly from the advanced settings page. To enable the

WLAN, select the **On** position (

) of the **Enable/Disable Wi-Fi** switch. To disable the

WLAN, select the **Off** position (

of the Enable/Disable Wi-Fi switch.

The pages of the **Advanced** section are designed for configuring additional parameters of the router (for the description of the pages, see the *Advanced* section, page 147).

Off

The pages of the **Firewall** section are designed for configuring the firewall of the router (for the description of the pages, see the *Firewall* section, page 160).

The pages of the **USB modem** section are designed to operate the connected 3G USB modem (for the description of the pages, see the *USB Modem* section, page 169).

The **WiMAX** section provides data on the connected WiMAX USB modem (for the description of the page, see the *WiMAX* section, page 172).

The pages of the **USB storage** section are designed to operate the connected USB storage (for the description of the pages, see the *USB Storage* section, page 174).

The pages of the **Torrent** section are designed for configuration of the built-in torrent client and management of distributing and downloading processes (for the description of the pages, see the *Torrent* section, page 178).

The pages of the **Control** section are designed for creating restrictions on access to the Internet (for the description of the page, see the *Control* section, page 181).

The pages of the **System** section provide functions for managing the internal system of the router (for the description of the pages, see the *System* section, page 184).

Also you can find a specific page via search. To do this, enter the name of the page, wholly or partly, in the search bar in the top part of the web-based interface page, and then select a needed link in the search results.

Figure 21. The page displaying the search results.

## Saving and Restoring Settings

Note that you should regularly save the changes of the router's settings to the non-volatile memory.

The router's web-based interface displays the notification on unsaved changes at the top of the page.

Figure 22. The notification on unsaved changes.

Place the mouse pointer on the **Notifications** icon ( $\bigcirc$ ) to view the list of unsaved changes and click the relevant link.

You can save the router's settings via the top-page menu displayed when the mouse pointer is over the **System** caption.

0 9 -	System	Ŧ	Language 👻
	Reboot		
	Save&Reboot		
	Save		
	Backup		
	Factory		
	Logout		

Figure 23. The top-page menu.

Click the **Reboot** line if you have already saved the router's settings.

Click the **Save&Reboot** line to save new settings and immediately reboot the router.

Click the **Save** line to save new settings to the non-volatile memory and continue configuring the device. Also you can save the device's parameters via the **Save** button on the **System / Configuration** page.

Click the **Backup** line and follow the dialog box appeared to save the configuration (all settings of the router) to your PC. Also you can save the router's configuration to your PC via the **Backup** button on the **System / Configuration** page.

Click the **Factory** line to restore the factory default settings. Also you can restore the factory defaults via the **Factory** button on the **System / Configuration** page.

Also you can restore the factory default settings via the hardware **RESET** button. The button is located on the back panel of the router next to the power connector.

To restore the factory default settings, insert a small paperclip into the hole of the button (with the router **powered on**), push, and hold for 10 seconds. Then remove the paperclip. All LEDs of the router should turn off and then turn on again.

Wait for about 30 seconds. Now you can access the web-based interface of the router using the default IP address, username and password.

If you fail to restore the factory defaults via the method described above, use the emergency reset method.

- 1. Power off the device.
- 2. Insert a small paperclip into the hole of the **RESET** button and push.
- 3. Power on the device keeping the button pushed.
- 4. After 5 seconds, release the button.
  - When you keep the button pushed for more than 8 seconds, the router switches to crash recovery mode. To restore normal operation of the router, please, contact the Technical Support Service.

When you have configured all needed settings, click the **Logout** line.

## CHAPTER 4. CONFIGURING VIA WEB-BASED INTERFACE

### Click'n'Connect

To configure a WAN connection, click the **Click'n'Connect** link in the **Net** section.

Figure 24. Configuring a WAN connection.

Connect the Ethernet cable provided by your ISP to the WAN port of the router. Verify the relevant LED (the **Internet** LED should be on).

Click the **Next** button to continue.

	Choose Your	oro∨ider		
	From the Provider drop-down list, select your country and operator if you are going to configure a 3G network connection, leave the Manual value, if you are going to configure a WAN connection of another type or you want to specify all settings 3G WAN connection independently.			nfigure a 3G network connection, or r you want to specify all settings for you
	Provider:	Manually	•	
For these settings, there is no documentation				
				< Back Next >

Figure 25. The page for selecting a 3G network operator.

On the opened page, from the **Provider** drop-down list, select your country and operator if you are going to configure a 3G network connection, or leave the **Manually** value, if you are going to configure a wired or WiMAX WAN connection or you want to specify all settings for your 3G WAN connection independently.

Click the **Next** button to continue.

MAC	A MAC address assigned to the interface. This parameter is mandatory if your ISP uses MAC address binding. In the field, enter the MAC address registered by your ISP upon concluding the agreement. You can click the <b>Clone MAC Address</b> button ()) to set the MAC address of the network interface card (of the computer that is being used to configure the router at the moment) as the MAC address of the WAN interface. Also you can set the address of a device connected to the router's LAN at the moment. To do this, select the relevant value from the drop-down list (the field will be filled in automatically).

Firewall	Select the checkbox to enable protection against ARP and DDoS attacks.		
Ping       Select the checkbox to allow the router to answer ping request the external network through this connection. For security not it is recommended not to select this checkbox.			

Click the **Next** button to continue.

After that the page displaying all specified settings opens. Click the **Apply** button to create the connection or the **Back** button to specify other settings.

After clicking the **Apply** button, the page for checking the Internet availability opens (see the *Checking Internet Availability* section, page 76).

# **Checking Internet Availability**

On the page, you can check the WAN connection you have created.

4-2	Checking the Inte	rnet availability with the ping utility	
	Address:	🖉 ya.ru	
	Result		
For these settings, there is no documentation	Checking the cable: Connection status:	the cable is plugged. <mark>down.</mark>	
		establish the connection. Wait for several minutes and click the Recheck b, you may have made errors when entering the connection parameters or	

Figure 60. Checking the Internet availability.

In the **Result** section, the status of the WAN connection and possible causes of malfunctions are displayed. To recheck the status of the WAN connection, enter the IP address or name of a host in the **Address** field or leave the value specified by default (**ya.ru**). Then click the **Recheck** button.

Click the **Back** button to specify other settings.

Click the **Next** button to continue.

After clicking the **Next** button, the page for configuring wireless connection opens (see the *Configuring Wireless Connection* section, page 77).

# **Configuring Wireless Connection**

On the page, you can change the name of your wireless network, specify a password to it, or disable Wi-Fi connections.

		able device (laptop, smartphone, etc.) cess point (SSID) and a password (en click "Skip to next".		
	SSID:	/ DIR-620		
	Encryption Key PSK:	76543210		
For these settings, there is no				
documentation				
			N	ext > Skip to nex

Figure 61. Configuring the wireless connection.

In the **SSID** field, specify a new name for the network (use digits and Latin characters).

In the **Encryption Key PSK** field, enter a key (a password that will be used to access your wireless network). Use digits and Latin characters.

Click the **Next** button to continue.

Click the **Skip to next** button to disable Wi-Fi connections.

After clicking the **Next** button or the **Skip to next** button, the page for configuring the router to use an IPTV set-top box opens (see the *Configuring IPTV* section, page 78).

# **Configuring IPTV**

On the page, you can configure the router to use an IPTV set-top box.

Figure 62. The page for selecting a LAN port to connect an IPTV set-top box.

On the opened page, select the LAN port of the router to which you will connect your IPTV set-top box.

If in the future you need to disconnect your IPTV set-top box from the specified LAN port and connect to it a computer, start the **IPTV settings wizard** (for the detailed description of the Wizard, see the *IPTV Settings Wizard* section, page 88).

If for accessing the Internet and IPTV services your ISP uses virtual local area networks with identifiers (VLAN ID), to configure access to the IPTV service, proceed to the **Advanced / VLAN** page, create a group of ports with the required value of the **VLAN ID** parameter, **Transparent** type, and the port to which the set-top box will be connected (see the *VLAN* section, page 148, for a detailed description of the elements from the page).

Click the **Back** button to specify other settings for your wireless network.

Click the **Next** button to continue.

Click the **Skip to next** button in order not to apply the IPTV settings.

On the opened page, click the **Back** button to specify other settings for configuring the router to use an IPTV set-top box.

Click the **Save** button to save the specified settings.

After clicking the **Save** button, the quick settings page opens.

# Wireless Network Settings Wizard

To specify all needed settings for your wireless network, click the **Wireless network settings** wizard link in the **Wi-Fi** section.

Wi-Fi » Wireless ne	etwork settings wizard

Figure 66. Network authentication types supported by the router.

The router supports the following authentication types:

Authentication type	cation type Description	
Open	Open authentication (with WEP encryption for wireless network modes not supporting 802.11n devices).	
Shared Shared key authentication with WEP encryption. This authentication type is not available when on the basic settings page, in the Wireless mode drop-down list, a mode supporting 802.1 devices is selected.		
WPAWPA-based authentication using a RADIUS server.		
WPA-PSKWPA-based authentication using a PSK.		
WPA2WPA2-based authentication using a RADIUS server.		
WPA2-PSK	WPA2-based authentication using a PSK.	
WPA/WPA2 mixed	A mixed type of authentication. When this value is selected, devices using the <b>WPA</b> authentication type and devices using the <b>WPA2</b> authentication type can connect to the WLAN of the router.	

Authentication type	Description
WPA-PSK/WPA2-PSK mixed	A mixed type of authentication. When this value is selected, devices using the <b>WPA-PSK</b> authentication type and devices using the <b>WPA2-PSK</b> authentication type can connect to the WLAN of the router.

The WPA, WPA2, and WPA/WPA2 mixed authentication types require a RADIUS server.

When the **Open** or **Shared** value is selected, the **WEP Encryption settings** section is displayed (the section is unavailable for the wireless network operating modes which support the standard 802.11n):

Wi-Fi » Wi	reless network settings wizard			
400	Security settings			
	Network Authentication:	Open	•	
	WEP Encryption sett	ings		
For these settings, the documentation	Enable Encryption WEP: Default Key ID: Encryption Key WEP as HEX: Encryption Key WEP (1): Encryption Key WEP (2): Encryption Key WEP (3): Encryption Key WEP (4):			
				< Back Next >

Figure 67. The Open value is selected from the Network Authentication drop-down list.

Parameter	Description
Enable Encryption WEP	The checkbox activating WEP encryption. When the checkbox is selected, the <b>Default Key ID</b> field, the <b>Encryption Key WEP as HEX</b> checkbox, and four <b>Encryption Key WEP</b> fields are displayed on the page. For the <b>Shared</b> authentication type the checkbox is always selected.
Default Key ID	The number of the key (from first to fourth) which will be used for WEP encryption.
Encryption Key WEP as HEX	Select the checkbox to set a hexadecimal number as a key for encryption.
Encryption Key WEP (1- 4)	Keys for WEP encryption. The router uses the key selected from the <b>Default Key ID</b> drop-down list. It is required to specify all the fields. You can specify keys containing 5 or 13 symbols (use digits and/or Latin characters). If the <b>Encryption Key WEP as HEX</b> checkbox is selected, you can specify only keys containing 10 symbols (the digits 0-9 and the characters A-F).

When the WPA-PSK, WPA2-PSK, or WPA-PSK/WPA2-PSK mixed value is selected, the WPA Encryption settings section is displayed:

Wi-Fi » Wireless r	network settings wizard			
400	Security settings			
	Network Authentication:	WPA2-PSK	•	
	Encryption Key PSK:	76543210		
For these settings, there is no	WPA2 Pre-authentication:

	WPA Encryption:	TKIP+AES 🔻		
	WPA reneval:*	<u> </u>		
				< Back Next >

Figure 68. The WPA2-PSK value is selected from the Network Authentication drop-down list.

Parameter	Description
Encryption Key PSK	A key for WPA encryption. The key can contain digits and/or Latin characters.
WPA2 Pre- authentication	The checkbox activating preliminary authentication (displayed only for the <b>WPA2-PSK</b> and <b>WPA-PSK/WPA2-PSK</b> mixed authentication types).
WPA Encryption	An encryption method: <b>TKIP</b> , <b>AES</b> , or <b>TKIP+AES</b> .
WPA renewal	The time period (in seconds), at the end of which a new key for WPA encryption is generated. When the value <b>0</b> is specified for this field, the key is not renewed.

When the WPA, WPA2, or WPA/WPA2 mixed value is selected, the RADIUS settings and WPA Encryption settings sections are available:

and a	Security settings			
	Network Authentication:	WPA2	•	
	WPA2 Pre-authentication:			
For these settings, there is no documentation	RADIUS settings	ngs		
	IP address:*	192.168.0.254		
	Port.*	1812		
	RADIUS encryption key:	n dlink		
	WPA Encryption set	ttings		
	WPA Encryption:	AES -		
	WPA reneval:*	2 3600		

Figure 69. The WPA2 value is selected from the Network Authentication drop-down list.

Parameter	Description
WPA2 Pre- authentication	The checkbox activating preliminary authentication (displayed only for the <b>WPA2</b> and <b>WPA/WPA2 mixed</b> authentication types.
IP address	The IP address of the RADIUS server.
Port	A port of the RADIUS server.
RADIUS encryption key	The password which the router uses for communication with the RADIUS server (the value of this parameter is specified in the RADIUS server settings).
WPA Encryption	An encryption method: <b>TKIP</b> , <b>AES</b> , or <b>TKIP+AES</b> .
WPA renewal	The time period (in seconds), at the end of which a new key for WPA encryption is generated. When the value <b>0</b> is specified for this field, the key is not renewed.

Click the **Next** button to continue.

When all the steps of configuring the WLAN are completed, the specified settings are displayed on the page. Check their correctness and then click the **Save** button. After that you get to the quick settings page.

# Virtual Server Settings Wizard

To create a virtual server for redirecting incoming Internet traffic to a specified IP address in the LAN, click the **Virtual server settings wizard** link in the **Firewall** section.

A A	Virtual server se	ettings	
T	Template:	Virtual Server HTTP ▼	
	Name:*		
	Interface:	WAN -	
For these settings, there is no	Private IP:		
documentation	Remote IP:		

Figure 70. The page for adding a virtual server.

On the opened page, you can specify the following parameters:

Parameter	Description
Template	Select a virtual server template from the drop-down list, or select <b>Custom</b> to specify all parameters of the new virtual server manually.
Name	Enter a name for the virtual server for easier identification. You can specify any name.
Interface	Select a WAN connection to which this virtual server will be assigned.
Private IP	Enter the IP address of the server from the local area network. To choose a device connected to the router's LAN at the moment, select the relevant value from the drop-down list (the field will be filled in automatically).
Remote IP	Enter the IP address of the server from the external network.

When needed settings are configured, click the **Save** button. After that you get to the quick settings page.

# **IPTV Settings Wizard**

To configure the router to use an IPTV set-top box, click the **IPTV settings wizard** link in the **IP-TV** section.

Figure 71. The page for selecting a LAN port to connect an IPTV set-top box.

On the opened page, select the LAN port of the router to which you will connect your IPTV set-top box and click the **Change** button. After that you will get to the quick settings page.

If in the future you need to disconnect your IPTV set-top box from the specified LAN port and connect to it a computer, on the current page deselect the LAN port and click the **Change** button.

If for accessing the Internet and IPTV services your ISP uses virtual local area networks with identifiers (VLAN ID), to configure access to the IPTV service, proceed to the **Advanced / VLAN** page, create a group of ports with the required value of the **VLAN ID** parameter, **Transparent** type, and the port to which the set-top box will be connected (see the *VLAN* section, page 148, for a detailed description of the elements from the page).

## Status

The pages of this section display data on the current state of the router:

- network statistics
- IP addresses leased by the DHCP server
- the routing table
- data on devices connected to the router's network and its web-based interface.

#### **Network Statistics**

On the **Status / Network statistics** page, you can view statistics for all connections existing in the system (WAN connections, LAN, WLAN). For each connection the following data are displayed: name and state (when the connection is on, its name is highlighted in green, when the connection is off, its name is highlighted in red), IP address and subnet mask, gateway (if the connection is established), MAC address, MTU value, and volume of data received and transmitted (with increase of the volume the units of measurement are changed automatically: byte, Kbyte, Mbyte, Gbyte).

	Name	IP	Gateway	MAC	MTU	Rx/Tx
	WIFI	-	-	00:52:40:E4:00:80	1500	3.01 Mbyte/O byte
	LAN	192.168.0.1/24		00:52:40:E4:00:80	1500	143 Kbyte/1.60 Mbyte
	WAN	192.168.161.229/24	192.168.161.1	00:52:40:E4:00:81	1500	255 Kbyte/3.13 Mbyte
On the Network statistics page, you can view statistics						
for all interfaces (connections) existing in the system.						
Read more						

Figure 72. The Status / Network statistics page.

#### DHCP

The **Status / DHCP** page displays the information on computers that have been identified by hostnames and MAC addresses and have got IP addresses from the DHCP server of the device, as well as the IP address expiration periods (the lease time).

	Status » DHCP				
<	<image/>	Hostname	IP address	MAC address	Expires

Figure 73. The Status / DHCP page.

# **Routing Table**

The **Status / Routing table** page displays the information on routes. The table contains destination IP addresses, gateways, subnet masks, and other data.

ma	Interface	Destination	Gateway	Mask	Flags	Metric
	WAN	192.168.6.14	192.168.152.18	255.255.255.255	UGH	0

ther data. Read more	WAN	0.0.0.0	192.168.152.18	0.0.0.0	UG	100

Figure 74. The Status / Routing table page.

## **LAN Clients**

On the **Status / LAN clients** page, you can view the list of devices connected to the router and devices accessing its web-based interface.

And I	IP address	Flags	MAC address	Interface
	192.168.152.18	0x2	00:16:36:F4:3B:62	WAN
	192.168.161.67	0x2	6C:62:6D:7D:26:A1	br0
	192.168.161.226	0x2	00:22:15:74:FD:6D	br0
e interface to which the e is connected. <u>Read more</u>				

Figure 75. The Status / LAN clients page.

For each device the following data are displayed: the IP address, the MAC address, and the interface to which the device is connected.

# Net

In this menu you can configure basic parameters of the router's local area network and configure connection to the Internet (a WAN connection).

#### WAN

On the **Net / WAN** page, you can create and edit connections used by the router.

By default, the **WAN** connection is configured in the system. It is assigned to the **INTERNET** port of the router. You can edit this connection or delete it.

2 A A	Name	Connection Type	Port	Status	Direction	Default gateway
	WAN	Dynamic IP	Ports:5	up	WAN	⊙
For these settings, there is no documentation						

Figure 76. The Net / WAN page.

To create a new connection, click the **Add** button. On the page displayed, specify the relevant values.

To edit an existing connection, left-click the relevant line in the table. On the page displayed, change the parameters and click the **Save** button.

To delete an existing connection, left-click the relevant line in the table. On the page displayed, click the **Delete** button.

To use one of existing WAN connections as a default gateway, select the choice of the **Default** gateway radio button located in the line corresponding to this connection.

#### Creating 3G WAN Connection

If the PIN code check is enabled for the SIM card inserted into your USB modem, then prior to creating a 3G WAN connection, proceed to the **USB modem** menu and enter the PIN code on the page displayed (see the *USB Modem* section, page 169). Then proceed to the **Net / WAN** page, click the **Add** button, and select the **3G** value from the **Connection Type** drop-down list.

General settings

Parameter	Description
	PPP
Username	A username (login) to connect to the network of the operator.
Without authorization	Select the checkbox if your operator does not require authorization.
Password	A password to connect to the network of the operator.
Password confirmation	The confirmation of the entered password (to avoid mistypes).
APN	An access point name. For GSM USB modems only.
Dial number	A number dialed to connect to the authorization server of the operator.
Authentication algorithm	Select a required authentication method from the drop-down list or leave the <b>AUTO</b> value.
MTU	The maximum size of units transmitted by the interface. Optional.

Ping:

Parameter	Description
Keep Alive	Select the checkbox if you want the router to keep you connected to the network of your operator even when the connection has been inactive for a specified period of time. When the checkbox is selected, the <b>LCP interval</b> and <b>LCP fails</b> fields are available. Specify the required values.
Extra options	In the field, you can specify additional data for encryption or authentication. <i>Optional</i> .
Dial on demand	Select the checkbox if you want the router to establish connection to the Internet on demand. In the <b>Maximum idle time</b> field, specify a period of inactivity (in seconds) after which the connection should be terminated.
PPP debug	Select the checkbox if you want to log all data on PPP connection debugging.
Miscellaneous	
NAT:	
firewall:	

Figure 79. The page for creating a new connection. The **Miscellaneous** section.

Parameter	Description
	Miscellaneous
NAT	Select the checkbox if you want one WAN IP address to be used for all computers of your LAN.
Firewall	Select the checkbox to enable protection against ARP and DDoS attacks.
Ping	Select the checkbox to allow the router to answer ping requests from the external network through this connection. For security reasons, it is recommended not to select this checkbox.

When all needed settings are configured, click the **Save** button.

## Creating PPPoE WAN Connection

To create a connection of the PPPoE type, click the **Add** button on the **Net / WAN** page. On the opened page, select the **PPPoE** value from the **Connection Type** drop-down list and specify the needed values.

Provider:	Manually

Password confirmation	The confirmation of the entered password (to avoid mistypes).	
VPN server address	The IP or URL address of the PPTP or L2TP authentication server.	

Parameter	Description
	Select a method of MPPE encryption.
	• <b>No encrypt</b> : MPPE encryption is not applied.
	• <b>MPPE 40/128 bit</b> : MPPE encryption with a 40-bit or 128-bit key is applied.
Encryption	• <b>MPPE 40 bit</b> : MPPE encryption with a 40-bit key is applied.
	• <b>MPPE 128 bit</b> : MPPE encryption with a 128-bit key is applied.
	MPPE encryption can be applied only if the <b>MS-CHAP</b> , <b>MS-CHAP-V2</b> , or <b>AUTO</b> value is selected from the <b>Authentication</b> algorithm drop-down list.
Authentication algorithm	Select a required authentication method from the drop-down list or leave the <b>AUTO</b> value.
мти	The maximum size of units transmitted by the interface.
Keep Alive	Select the checkbox if you want the router to keep you connected to the server even when the connection has been inactive for a specified period of time. When the checkbox is selected, the <b>LCP</b> <b>interval</b> and <b>LCP fails</b> fields are available. Specify the required values.
Extra options	Advanced options of the pppd daemon which need to be specified for this connection. <i>Optional</i> .
Dial on demand	Select the checkbox if you want the router to establish the connection on demand. In the <b>Maximum idle time</b> field, specify a period of inactivity (in seconds) after which the connection should be terminated.
Static IP Address	Fill in the field if you want to use a static IP address for this connection.
PPP debug	Select the checkbox if you want to log all data on PPP connection debugging.
IP received	The assigned IP address.

Miscellaneous			
Enable RIP:			
NAT:			
firewall:			
Ping:			

Figure 91. The page for creating a new connection. The **Miscellaneous** section.

Parameter	Description
	Miscellaneous
Enable RIP	Select the checkbox to allow using RIP for this connection.
NAT	Select the checkbox if you want one WAN IP address to be used for all computers of your LAN.
Firewall	Select the checkbox to enable protection against ARP and DDoS attacks.
Ping	Select the checkbox to allow the router to answer ping requests from the external network through this connection. For security reasons, it is recommended not to select this checkbox.

When all needed settings are configured, click the **Save** button.

### Creating PPTP + Static IP or L2TP + Static IP WAN Connection

To create a connection of the PPTP + Static IP or L2TP + Static IP type, click the **Add** button on the **Net / WAN** page. On the opened page, select the relevant value from the **Connection Type** drop-down list and specify the needed values.

<sup>o</sup> rovider:	Manually
onnection Type:	PPTP + Static IP
Port:	Ports:5
Name:*	statpptp_Ports:5_2
Enable:	
Direction:	WAN
Ethernet	
МТU:*	2 1500
MAC:	

Figure 92. The page for creating a new connection. The General settings and Ethernet sections.

Parameter	Description
	General settings
Provider	Leave the <b>Manually</b> value.
Port	A physical or virtual interface to which the new connection will be assigned.
Pon	Select the <b>USB-WIMAX</b> value to assign this connection to the WiMAX USB modem.
Name	A name for connection for easier identification.
Enable	Select the checkbox to enable the connection.
Direction	The direction of this connection.
	Ethernet
MTU	The maximum size of units transmitted by the interface.

Parameter	Description
	A MAC address assigned to the interface. This parameter is mandatory if your ISP uses MAC address binding. In the field, enter the MAC address registered by your ISP upon concluding the agreement.
MAC	You can click the <b>Clone MAC Address</b> button () to set the MAC address of the network interface card (of the computer that is being used to configure the router at the moment) as the MAC address of the WAN interface.
	Also you can set the address of a device connected to the router's LAN at the moment. To do this, select the relevant value from the drop-down list (the field will be filled in automatically).
IP	

IP Address:*	2			
Netmask:*	1			
Gateway IP address:*	1			
Primary DNS server:*	1

<b>Firewall</b> Select the checkbox to enable protection against ARI attacks.	
Ping	Select the checkbox to allow the router to answer ping requests from the external network through this connection. For security reasons, it is recommended not to select this checkbox.

When all needed settings are configured, click the **Save** button.

## LAN

To configure the router's local interface, proceed to the **Net / LAN** page.

Figure 102. Basic settings of the local interface.

If needed, edit the basic settings of the local interface.

Parameter	Description
IP Address	The IP address of the router in the local subnet. By default, the following value is specified: <b>192.168.0.1</b> .
Netmask	The mask of the local subnet. By default, the following value is specified: <b>255.255.0</b> .

When needed settings are configured, click the **Save** button.

In the **DHCP server** section, you can configure the built-in DHCP server of the router.

DHCP server	
Mode:	Enable 💌
DNS Relay:	
Start IP:*	192.168.0.2
End IP:*	2 192.168.0.100
Lease time (min):*	₹ 86400

Figure 103. The section for configuring the DHCP server.

Parameter	Description
	An operating mode of the router's DHCP server.
Mode	<b>Enable</b> : the router assigns IP addresses to clients automatically in accordance with the specified parameters. When this value is selected, the <b>DNS Relay</b> , <b>Start IP</b> , <b>End IP</b> , and the <b>Lease time</b> fields are displayed on the page.
Wode	<b>Disable</b> : the router's DHCP server is disabled, clients' IP addresses are assigned manually.
	<b>Relay</b> : an external DHCP server is used to assign IP addresses to clients. When this value is selected, the <b>External DHCP server IP</b> field is displayed on the page.
DNS Relay	Select the checkbox so that the devices connected to the router obtain the address transmitted by the ISP or specified on the <b>Advanced / DNS page</b> as the DNS server address.
	Deselect the checkbox so that the devices connected to the router obtain the address of the router as the DNS server address.
Start IP	The start IP address of the address pool used by the DHCP server to distribute IP addresses to clients.
End IP	The end IP address of the address pool used by the DHCP server to distribute IP addresses to clients.
Lease time	The lifetime of IP addresses leased by the DHCP server. At the end of this period the leased IP address is revoked and can be distributed to another device, unless the previous device has confirmed the need to keep the address.
External DHCP server IP	The IP address of the external DHCP server which assigns IP addresses to the router's clients.

When all needed settings are configured, click the **Save** button.

In the **Static DHCP** section, you can specify MAC address and IP address pairs (set a fixed IP address in the local area network for a device with a certain MAC address). The router assigns IP addresses in accordance with the specified pairs only when the DHCP server is enabled (in the **DHCP server** section, in the **Mode** drop-down list, the **Enable** value is selected).

Known IP/MAC addresses:	<selec< th=""><th>t IP/MAC addre</th><th>ess&gt; •</th><th></th></selec<>	t IP/MAC addre	ess> •	
	IP		MAC	Host

Figure 104. The section for creating MAC-IP pairs.

To create a MAC-IP pair, click the **Add** button. In the **IP** field, enter an IP address which will be assigned to the device from the LAN, then in the **MAC** field, enter the MAC address of this device. In the **Host** field, specify a network name of the device for easier identification (*optional*).

Also you can create a MAC-IP pair for a device connected to the router's LAN at the moment. To do this, select the relevant value from the **Known IP/MAC** addresses drop-down list (the **IP** and **MAC** fields will be filled in automatically).

When all needed MAC-IP pairs are specified, click the **Save** button.

Existing MAC-IP pairs are displayed in the table of the **Static DHCP** section. To remove a pair, select the checkbox in the relevant line in the table and click the **Remove** button. Then click the **Save** button.

# Wi-Fi

In this menu you can specify all needed settings for your wireless network.

## **Common settings**

On the **Wi-Fi / Common settings** page, you can enable your wireless local area network (WLAN).

Change

Figure 105. Common settings of the wireless LAN.

The **Enable Wireless** checkbox enables Wi-Fi connections. By default, the checkbox is selected. If you want to disable your WLAN, deselect the **Enable Wireless** checkbox.

The value from the **BSSID** drop-down list is the unique identifier for your Wi-Fi network. You cannot change the value of this parameter, it is determined in the device's internal settings.

# **Basic Settings**

On the Wi-Fi / Basic settings page, you can configure basic parameters of the device's WLAN.

Wi-Fi » Basic settin	gs		
	Hide Access Point: SSID:	DIR-620	
	Country: Channel:	RUSSIAN FEDERATION	•
Here you can configure basic parameters of the WLAN.	Wireless mode:	auto 802.11 B/G/N mixed 'G" on any of the modes with "N" is recommended to re-tune security!	
Read more	Max Associated Clients:*		
			Change

Figure 106. Basic settings of the wireless LAN.

Parameter	Description
Hide Access Point	If the checkbox is selected, other users cannot see your Wi-Fi network. (It is recommended not to select this checkbox in order to simplify initial configuration of your WLAN.)
SSID	A name for the WLAN. By default, the value <b>DIR-620</b> is specified. It is recommended to specify another name for the network upon initial configuration (use digits and Latin characters).
Country	The country you are in. Select a value from the drop-down list.
Channel	The wireless channel number. When the <b>auto</b> value is selected, the router itself chooses the channel with the least interference.
Wireless mode	Operating mode of the wireless network of the router. This parameter defines standards of the devices that will be able to use your wireless network. Select a value from the drop-down list.
Max Associated Clients	The maximum number of devices connected to the wireless network of the router. When the value <b>0</b> is specified, the device does not limit the number of connected clients.

When you have configured the parameters, click the **Change** button.

# **Security Settings**

On the Wi-Fi / Security settings page, you can modify security settings of the WLAN.

	Wi-Fi » Security se	ttings			
	400	Network Authentication:	Open	<u> </u>	
		WEP Encryption setti	ngs		
		Enable Encryption WEP:			
	Here you can configure security of your WLAN.				
	Read more				
<					
					Change

Figure 107. The default security settings.

By default, the **Open** network authentication type with no encryption is specified for the WLAN.

The default security settings do not provide sufficient protection for the WLAN. Please, specify your own security settings for the WLAN.

~	www.com/our/our/our/our/our/our/our/our/our/our	Network Authentication: WEP Encryption setting Enable Encryption WEP:	Open	
				Change

Figure 108. Network authentication types supported by the router.

The router supports the following authentication types:

Authentication type	Description	
Open	Open authentication (with WEP encryption for wireless network modes not supporting 802.11n devices).	
Shared	Shared key authentication with WEP encryption. This authentication type is not available when on the <b>Wi-Fi / Basic settings</b> page, in the <b>Wireless mode</b> drop-down list, a mode supporting 802.11n devices is selected.	
WPA	WPA-based authentication using a RADIUS server.	
WPA-PSK	WPA-based authentication using a PSK.	
WPA2	WPA2-based authentication using a RADIUS server.	
WPA2-PSKWPA2-based authentication using a PSK.		
WPA/WPA2 mixed	A mixed type of authentication. When this value is selected, devices using the <b>WPA</b> authentication type and devices using the <b>WPA2</b> authentication type can connect to the WLAN of the router.	

Authentication type	Description
WPA-PSK/WPA2-PSK mixed	A mixed type of authentication. When this value is selected, devices using the <b>WPA-PSK</b> authentication type and devices using the <b>WPA2-PSK</b> authentication type can connect to the WLAN of the router.

The WPA, WPA2, and WPA/WPA2 mixed authentication types require a RADIUS server.

When the **Open** or **Shared** value is selected, the **WEP Encryption settings** section is displayed (the section is unavailable for the wireless network operating modes which support the standard 802.11n):

Wi-Fi » Security set	tings		
	Network Authentication: WEP Encryption setti	Open Ngs	<u>-</u>

			Change

Figure 109. The Open value is selected from the Network Authentication drop-down list.

Parameter	Description		
Enable Encryption WEPThe checkbox activating WEP encryption. When the check selected, the Default Key ID field, the Encryption Key WEP displayed on the page. For the Shared authentication checkbox is always selected.			
Default Key ID	The number of the key (from first to fourth) which will be used for WEP encryption.		
Encryption Key WEP as HEXSelect the checkbox to set a hexadecimal number as a encryption.			
Encryption Key WEP (1- 4)	Keys for WEP encryption. The router uses the key selected from the <b>Default Key ID</b> drop-down list. It is required to specify all the fields. You can specify keys containing 5 or 13 symbols (use digits and/or Latin characters). If the <b>Encryption Key WEP as HEX</b> checkbox is selected, you can specify only keys containing 10 symbols (the digits 0-9 and the characters A-F).		

When the **WPA-PSK**, **WPA2-PSK**, or **WPA-PSK/WPA2-PSK mixed** value is selected, the **WPA Encryption settings** section is displayed:

	Wi-Fi » Security set	ttings		
		Network Authentication: Encryption Key PSK: WPA2 Pre-authentication:	WPA2-PSK	<u>.</u>
~	Here you can configure security of your WLAN. <u>Read more</u>	WPA Encryption set	AES	
				Change

Figure 110. The WPA2-PSK value is selected from the Network Authentication drop-down list.

Parameter	Description	
Encryption Key PSK	A key for WPA encryption. The key can contain digits and/or Latin characters.	
WPA2 Pre- authentication	The checkbox activating preliminary authentication (displayed only for the <b>WPA2-PSK</b> and <b>WPA-PSK/WPA2-PSK</b> mixed authentication types).	
WPA Encryption	An encryption method: <b>TKIP</b> , <b>AES</b> , or <b>TKIP+AES</b> .	
WPA renewal	The time period (in seconds), at the end of which a new key for WPA encryption is generated. When the value <b>0</b> is specified for this field, the key is not renewed.	

When the WPA, WPA2, or WPA/WPA2 mixed value is selected, the RADIUS settings and WPA Encryption settings sections are available:

	Wi-Fi » Security set	ttings		
		Network Authentication: WPA2 Pre-authentication: RADIUS settings	WPA2	<u>.</u>
×	Here you can configure security of your WLAN. <u>Read more</u>	IP address:* Port:* RADIUS encryption key:	2 192.168.0.254 2 1812 2 dlink	
		WPA Encryption set	AES -	
				Change

Figure 111. The WPA2 value is selected from the Network Authentication drop-down list.

Parameter	Description
WPA2 Pre- authentication	The checkbox activating preliminary authentication (displayed only for the <b>WPA2</b> and <b>WPA/WPA2 mixed</b> authentication types.
IP address	The IP address of the RADIUS server.
Port	A port of the RADIUS server.
RADIUS encryption key	The password which the router uses for communication with the RADIUS server (the value of this parameter is specified in the RADIUS server settings).
WPA Encryption	An encryption method: <b>TKIP</b> , <b>AES</b> , or <b>TKIP+AES</b> .
WPA renewal	The time period (in seconds), at the end of which a new key for WPA encryption is generated. When the value <b>0</b> is specified for this field, the key is not renewed.

When you have configured the parameters, click the **Change** button.

## **MAC Filter**

On the **Wi-Fi / MAC Filter** page, you can define a set of MAC addresses of devices which will be allowed to access the WLAN, or define MAC addresses of devices which will not be allowed to access the WLAN.

Wi-Fi » MAC Filter »	Filter mode	MAC addresses	
	MAC filter restrict mode:	:	
On the page you can configure the MAC filter. The filter for MAC addresses of network interface cards is a very convenient way of blocking connection of unwanted users to your LAN. <u>Read more</u>			

Figure 112. The MAC filter for the wireless network.

By default, MAC filtering is not active (the **Disabled** choice of the **MAC** filter restrict mode radio button is selected on the **Filter mode** tab).

To open your wireless network for the devices which MAC addresses are specified on the **MAC** addresses tab and to close the wireless network for all other devices, select the **Allow** choice of the **MAC** filter restrict mode radio button and click the **Change** button.

To close your wireless network for the devices which MAC addresses are specified on the **MAC** addresses tab, select the **Deny** choice of the **MAC** filter restrict mode radio button and click the **Change** button.

To add a MAC address to which the selected filtering mode will be applied, proceed to the **MAC** addresses tab.

Wi-Fi » MAC Filter »	Filter mode MAC addresses		
	MAC address adding		
	MAC address:*		
On the page you can configure the MAC filter. The filter for MAC addresses of network interface cards is a very convenient way	MAC address list		
of blocking connection of unwanted users to your LAN.	MAC address	Delete	
<	Delete		

Figure 113. The tab for adding a MAC address.

Enter an address in the **MAC address** field of the **MAC address adding** section and click the **Add** button.

To remove a MAC address from the list of MAC addresses, select the checkbox located to the right of the relevant MAC address in the **MAC address list** section and click the **Delete** button.

## **Station List**

On the Wi-Fi / Station List page, you can view the list of wireless clients connected to the router.

Wi-Fi » Station List											
	MAC	AID	PSM	MIMOPS	MCS	BW	SGI	STBC	Disconne	ct	
On the Station list page, you can view the list of wireless devices connected to the router.											
<											
									Refresh	Disconne	ct

Figure 114. The list of the wireless clients.

If you want to disconnect a wireless device from your WLAN, select the checkbox in the line containing the relevant MAC address, and click the **Disconnect** button.

To view the latest data on the devices connected to the WLAN, click the **Refresh** button.

## WPS

On the **Wi-Fi / WPS** page, you can enable the function for secure configuration of the WLAN and select a method used to easily add wireless devices to the WLAN.

The WPS function helps to configure the protected wireless network automatically. Devices connecting to the wireless network via the WPS function must support the WPS function.

Before using the function you need to configure one of the following authentication types:

- Open with no encryption, WPA-PSK, WPA2-PSK, or WPA-PSK/WPA2-PSK mixed with the AES or TKIP+AES encryption method (on the Wi-Fi / Security settings
- <u>page).</u>

Wi-Fi » WPS

	WPS Method:	PBC 💌
	Connect	

Figure 115. The page for configuring the WPS function.

To activate the WPS function, select the **WPS Enable** checkbox and click the **Change** button. When the checkbox is selected, the **Information** and **Connection** sections are available on the page.

Parameter	Description
Default PIN code	The PIN code of the router. This parameter is used when connecting the router to a registrar to set the parameters of the WPS function.
WPS Status	<ul> <li>The state of the WPS function:</li> <li>Configured (all needed settings are specified)</li> <li>Unconfigured (you need to specify the relevant settings).</li> </ul>
SSID	The name of the router's WLAN.
Network Authentication	The network authentication type specified for the WLAN.
Encryption	The encryption type specified for the WLAN.
Encryption key	The encryption key specified for the WLAN.
Refresh	Click the button to refresh the data on the page.
Reset to unconfigured	Click the button to reset the parameters of the WPS function.
WPS Method	A method of the WPS function. Select a value from the drop-down list. PIN: Connecting the device via the PIN code.
	<b>PBC</b> : Connecting the device via the push button (actual or virtual).
PIN Code	The PIN code of the WPS-enabled device that needs to be connected to the wireless network of the router.
	The field is displayed only when the <b>PIN</b> value is selected from the <b>WPS Method</b> drop-down list.
Connect	Click the button to connect the wireless device to the router's WLAN via the WPS function.

### Using WPS Function via Web-based Interface

To add a wireless device via the PIN method of the WPS function, follow the next steps:

- 1. Select the **WPS Enable** checkbox.
- 2. Click the **Change** button.
- 3. Select the **PIN** value from the **WPS Method** drop-down list.
- 4. Select the PIN method in the software of the wireless device that you want to connect to the router's WLAN.
- 5. Click the relevant button in the software of the wireless device that you want to connect to the WLAN.
- 6. Right after that, enter the PIN code specified on the cover of the wireless device or in its software in the **PIN Code** field.
- 7. Click the **Connect** button in the web-based interface of the router.

To add a wireless device via the PBC method of the WPS function, follow the next steps:

- 1. Select the **WPS Enable** checkbox.
- 2. Click the **Change** button.
- 3. Select the **PBC** value from the **WPS Method** drop-down list.
- 4. Select the PBC method in the software of the wireless device that you want to connect to the router's WLAN.
- 5. Click the relevant button in the software or press the WPS button on the cover of the wireless device that you want to connect to the WLAN.
- 6. Click the **Connect** button in the web-based interface of the router.

#### Using WPS Function without Web-based Interface

You can add a wireless device to the router's WLAN without accessing the web-based interface of the router. To do this, you need to configure the following router's settings:

- 1. Specify corresponding security settings for the wireless network of the router.
- 2. Select the **WPS Enable** checkbox.
- 3. Click the **Change** button.
- 4. Save the settings and close the web-based interface (click the **Save** line in the top-page menu displayed when the mouse pointer is over the **System** caption, then click the **Logout** line).

Later you will be able to add wireless devices to the WLAN by pressing the **WPS** button of the router.

- 1. Select the PBC method in the software of the wireless device that you want to connect to the router's WLAN.
- 2. Click the relevant button in the software or press the WPS button on the cover of the wireless device that you want to connect to the WLAN.
- 3. Press the **WPS** button of the router.

After clicking the button the **WPS** LED blinks blue. If the wireless device has been successfully connected to the WLAN, the LED stops blinking and lights blue for several minutes.

# **Additional Settings**

On the Wi-Fi / Additional settings page, you can define additional parameters for the WLAN of the router.

	Changing parar	meters presented of	on this page may negatively affect your WLAN!
	Wi-Fi » Additional s	ettings	
1		Station Keep Alive:*	
	4-3	Beacon Period:*	100
		RTS Threshold:*	2347
		Frag Threshold:*	2346
	On the Additional settings	DTIM Period:*	1
	page, you can define additional parameters for your WLAN.	TX Power:*	100
	Attention! Changing parameters presented on this page may negatively affect your WLAN.	BG Protection:	Auto -
		Bandwidth:	20/40MHz - 👻
<	Read more	TX Preamble:	Long Preamble V
			Change

Figure 116. Additional settings of the WLAN.

The following fields are available on the page:

Parameter	Description
Station Keep Alive	The time interval (in seconds) between keep alive checks of wireless devices from your WLAN. When the value <b>0</b> is specified, the checking is disabled.
Beacon Period	The time interval (in milliseconds) between packets sent to synchronize the wireless network.
RTS Threshold	The minimum size (in bites) of a packet for which an RTS frame is transmitted.
Frag Threshold	The maximum size (in bites) of a non-fragmented packet. Larger packets are fragmented (divided).

Parameter	Description				
DTIM Period	The time period (in seconds) between sending a DTIM (a message notifying on broadcast or multicast transmission) and data transmission.				
TX Power	The transmit power (in percentage terms) of the router.				
	The 802.11b and 802.11g protection function is used to minimize collisions between devices of your wireless network.				
	Select a value from the drop-down list.				
BG Protection	<b>Auto</b> : The protection function is enabled and disabled automatically depending on the state of the network (this value is recommended if your wireless local area network consists of both 802.11b and 802.11g devices).				
	<b>Always On</b> : The protection function is always enabled (this setting can substantially lower the efficiency of your wireless network).				
	Always Off: The protection function is always disabled.				
	The channel bandwidth for 802.11n devices.				
	<b>20MHz</b> : 802.11n devices operate at 20MHz channels.				
	<b>40MHz</b> : 802.11n devices operate at 40MHz channels.				
Bandwidth	<b>20/40MHz</b> -: 802.11n devices operate at 20MHz and 40MHz channels (the channel is combined with the previous adjacent channel).				
	<b>20/40MHz</b> +: 802.11n devices operate at 20MHz and 40MHz channels (the channel is combined with the next adjacent channel).				
	This parameter defines the length of the CRC block sent by the router when communicating to wireless devices.				
TX Preamble	Select a value from the drop-down list.				
	Long Preamble.				
	<b>Short Preamble</b> (this value is recommended for networks with high-volume traffic).				

When you have configured the parameters, click the **Change** button.

#### WMM

On the Wi-Fi / WMM page, you can enable the Wi-Fi Multimedia function.

The WMM function implements the QoS features for Wi-Fi networks. It helps to improve the quality of data transfer over Wi-Fi networks by prioritizing different types of traffic.

To enable the function, select the WMM checkbox and click the Change button.

and	WMM:						
	Parar	meters of Acc	ess Point				
	AC	Aifsn	CWMin	CWMax	Тхор	ACM	Ack
On the WMM page, you can	AC_BK	27	1 -	1023 -	20		
enable the Wi-Fi Multimedia function. The WMM function	AC_BE	23	15 🗸	63 -	20		
implements the QoS features for Wi-Fi networks. It helps to	AC_VI	<b>ℤ1</b>	7 -	15 -	294		
In within the works. It theps to improve the quality of data transfer over Wi-Fi networks by prioritizing different types of traffic. To enable the function, select the WMM checkbox and click the WMM checkbox and click the Change button. All needed settings for the WMM function are specified in the system. It is recommended not to change the default values. Read more	AC_VO	<b>ℤ1</b>	3 -	7 🗸	<u>/</u> 47

	AC_VI	2	7 -	15 🕶	2 94		
	AC_VO	<b>ℤ2</b>	3 -	7 🚽	247		

Figure 117. The page for configuring the WMM function.

All needed settings for the WMM function are specified in the device's system. It is recommended not to change the default values.

The WMM function allows assigning priorities for four Access Categories (AC):

- AC\_BK (*Background*), low priority traffic (print jobs, file downloads, etc.).
- **AC\_BE** (*Best Effort*), traffic from legacy devices or devices/applications that do not support QoS.
- AC\_VI (Video).
- AC\_VO (Voice).

Parameters of the Access Categories are defined for both the router itself (in the **Parameters of Access Point** section) and wireless devices connected to it (in the **Parameters of Station** section).

For every Access Category the following fields are available:

Parameter	Description
Aifsn	<i>Arbitrary Inter-Frame Space Number.</i> This parameter influences time delays for the relevant Access Category. The lower the value, the higher is the Access Category priority.
CWMin/CWMax	Contention Window Minimum/Contention Window Maximum. Both fields influence time delays for the relevant Access Category. The <b>CWMax</b> field value should not be lower, than the <b>CWMin</b> field value. The lower the difference between the <b>CWMax</b> field value and the <b>CWMin</b> field value, the higher is the Access Category priority.
Тхор	<i>Transmission Opportunity.</i> The higher the value, the higher is the Access Category priority.
ACM	Admission Control Mandatory. If selected, prevents from using the relevant Access Category.
Ack	<ul> <li>Acknowledgment. Answering response requests while transmitting.</li> <li>Displayed only in the <b>Parameters of Access Point</b> section.</li> <li>If not selected, the router answers requests.</li> <li>If selected, the router does not answer requests.</li> </ul>

When you have configured the parameters, click the **Change** button.

### Client

On the **Wi-Fi / Client** page, you can configure the router as a client to connect to a wireless access point.

As a rule, the client mode is used to connect to a WISP network. All parameters specified on this page should be provided by your WISP.

m	Enable client:					
	List of wireless networks

	00:24:01:dd:a8:99 WPA2PSK/AES 34					Cha

Figure 118. The page for configuring the client mode.

To configure the router as a client, select the **Enable client** checkbox. When the checkbox is selected, the following fields are displayed on the page:

Parameter	Description
SSID	The name of the network to which the router connects.
BSSID	The unique identifier of the network to which the router connects.
Network Authentication	The authentication type of the network to which the router connects.

When the **Open** or **Shared** authentication type is selected, the following fields are available:

Parameter	Description
Enable Encryption WEP	The checkbox activating WEP encryption. When the checkbox is selected, the <b>Default Key ID</b> field and four <b>Encryption Key WEP</b> fields are displayed on the page. For the <b>Shared</b> authentication type the checkbox is always selected.

Parameter	Description
Default Key ID	The number of the key (from first to fourth) which will be used for WEP encryption.
Encryption Key WEP (1- 4)	Keys for WEP encryption. The router uses the key selected from the <b>Default Key ID</b> drop-down list. It is required to specify all the fields. You can specify keys containing 5 or 13 symbols (use digits and/or Latin characters).

When the **WPA-PSK**, **WPA2-PSK**, or **WPA-PSK/WPA2-PSK mixed** authentication type is selected, the following fields are available:

Parameter	Description
WPA Encryption	An encryption method: <b>TKIP</b> , <b>AES</b> , or <b>TKIP+AES</b> .
Encryption Key PSK	A key for WPA encryption. The key can contain digits and/or Latin characters.

When you have configured the parameters, click the **Change** button.

In addition, when the **Enable client** checkbox is selected, the list of available wireless networks is displayed on the page. The **Unknown wireless networks** field shows the number of hidden wireless networks.

To view the latest data on the available wireless networks, click the **Search** button.

To connect to a wireless network from the list, select the needed network. Upon that the relevant values are automatically inserted in the **SSID**, **BSSID**, and **Network Authentication** fields.

For the **Open** authentication type with no encryption, click the **Change** button.

For the **Open** authentication type with encryption and the **Shared** authentication type, select a needed value from the **Default Key ID** drop-down list, fill in 4 **Encryption Key WEP** fields, and click the **Change** button.

For the **WPA-PSK**, **WPA2-PSK**, or **WPA-PSK/WPA2-PSK mixed** authentication types, fill in the **Encryption Key PSK** field and click the **Change** button.

After clicking the **Change** button, the wireless channel of DIR-620 will switch to the channel of the wireless access point to which you have connected.

If the router is connected to the selected network successfully, the green indicator appears to the right of the network's SSID in the table.

After configuring the device as a client, you need to create a WAN connection with relevant parameters for the **WiFiClient** port.

## Advanced

In this menu you can configure advanced settings of the router:

- create groups of ports for VLANs
- enable the UPnP function
- configure a DDNS service
- add name servers
- define static routes
- create rules for remote access to the web-based interface
- allow the router to use IGMP.

### VLAN

On the **Advanced / VLAN** page, you can create and edit groups of ports for virtual networks (VLANs).

By default, 2 groups are created in the router's system:

- **lan**: it includes ports 1-4 and the wireless interface;
- **wan**: for the WAN interface; it includes port 5.

The **VLAN ID** parameter is not specified for both groups. Such a setting means that these groups of ports are not assigned to any VLAN.

	port1		U

Figure 120. The page for editing a group of ports for VLAN.

You can specify the following parameters:

Parameter	Description					
	Main settings					
NameA name for the port for easier identification.						
<b>Enable</b> Select the checkbox to allow using this group of ports.						
	The type of the VLAN which identifier is specified in the <b>VLAN ID</b> field.					
	<b>Local</b> . The group of this type is a channel used to connect local clients to the router. It is mostly used to connect different types of clients, which require separate connection settings.					
Туре	<b>NAT</b> . The group of this type is an external connection with address translation. It is mostly used to connect to the Internet. Later the VLAN which identifier is specified in the <b>VLAN ID</b> field is used to create a WAN connection (on the <b>Net / WAN</b> page).					
	<b>Transparent</b> . The group of this type is a transparent connection between an internal port and an external connection. It is mostly used to connect IPTV set-top boxes.					

Parameter	Description
VLAN ID	An identifier of the VLAN to which this group of ports will be assigned.
	Ports
Port	From the list, select an available value (a physical port of the router, the wireless interface) to assign it to this group. The port will be displayed in the table at the bottom of the page.
QoS	A priority tag for the traffic transmitted through the port highlighted in the table at the bottom of the page.
Тад	<ul> <li>Select a value for the port highlighted in the table at the bottom of the page:</li> <li>tagged,</li> <li>untagged.</li> </ul>

Click the **Save changes** button.

Click the **Delete port** button to delete the port highlighted in the table at the bottom of the page.

Click the **Delete VLAN** button to delete this group of ports form the system.

For further use of groups of ports for VLAN it is required to save the changed settings to

the non-volatile memory of the router and reboot it (click the **Save&Reboot** line in the top-page menu displayed when the mouse pointer is over the **System** caption).

### UPnP

On the **Advanced / UPnP** page, you can enable and disable the UPnP function.

UPnP is a set of networking protocols designed for automatic configuration of network devices. The UPnP function performs automatic configuration of the device's parameters for network applications requiring an incoming connection to the router.

	Advanced » UPnP		
		UPnP settings	
		Enabled:	
~	On the UPnP page, you can enable the UPnP function. UPnP is a set of networking protocols designed for automatic configuration of network devices. To add a new DDNS service, click the **Add** button.

Advanced » DDNS	
<image/> <b>DDIS Client edition DIS Client edition edition edition edition edition e</b>	Change

Figure 123. The page for editing the DDNS service.

You can specify the following parameters:

Parameter	Description	
DDNS Service	Select a DDNS provider from the drop-down list.	
Host name	The domain name registered at your DDNS provider.	
User name	The username to authorize for your DDNS provider.	
User password	The password to authorize for your DDNS provider.	
Interface Select a WAN connection which IP address will be us the DDNS service.		
Update period	An interval (in minutes) between sending data with the IP address of the interface specified in the field above to the relevant DDNS service.	

Click the **Change** button.

To edit parameters of the existing DDNS service, click the relevant service link. On the opened page, change the needed parameters and click the **Change** button.

To remove an existing DDNS service, click the relevant service link. On the opened page, click the **Delete** button.

### DNS

On the **Advanced / DNS** page, you can add DNS servers to the system.

Advanced » DNS	DNS settings		
<image/> <text></text>	Manual: Default route: Interface: Name servers:	₩AN ✓ ₩AN ✓ 192.168.161.140 8.8.8.8	
			Change

Figure 124. The Advanced / DNS page.

DNS servers are used to determine the IP address from the name of a server in Intranets or the Internet (as a rule, they are specified by an ISP or assigned by a network administrator).

The device performs the DNS relay function, i.e., it redirects the DNS requests of users to external DNS servers. You can specify the addresses of DNS servers manually on this page, or configure the router to obtain DNS servers addresses automatically from your ISP upon installing a connection.

When you use the built-in DHCP server, the network parameters (including DNS servers) are distributed to clients automatically.

If you want to configure automatic obtainment of DNS servers addresses, deselect the **Manual** checkbox, select a WAN connection which will be used to obtain addresses of DNS servers automatically from the **Interface** drop-down list or select the **Default route** checkbox, so that the router could use the connection set as the default gateway (on the **Net / WAN** page) to obtain DNS server addresses, and click the **Change** button.

If you want to specify the DNS server manually, select the **Manual** checkbox and enter a DNS server address in the **Name servers** list. To specify several addresses, press the **Enter** key and enter a needed address in the next line. Then click the **Change** button.

To remove a DNS server from the system, remove the relevant line from the **Name servers** field and click the **Change** button.

## Routing

On the **Advanced / Routing** page, you can add static routes (routes for networks that are not connected directly to the device but are available through the interfaces of the device) into the system.

	Advanced » Routi	ng Routing configurat	ion			
	T	You can add, edit and dele	•••••••••••••••••••••••••••••••••••••••

Figure 131. The page for adding a rule for IP filtering.

You can specify the following parameters:

Parameter Description						
	IP filter rule editing					
NameA name for the rule for easier identification.						
Protocol         A protocol for network packet transmission. Select a value from drop-down list.						
Action	<ul> <li>Select an action for the rule.</li> <li>ACCEPT: Allows packet transmission in accordance with the criteria specified by the rule.</li> <li>DROP: Denies packet transmission in accordance with the criteria specified by the rule.</li> </ul>					
	IP Addresses					
IP address range	Select the checkbox if you want to specify a range of IP addresses as the source or destination IP address.					

Parameter	Description
	The source host/subnet IP address.
	If the <b>IP address range</b> checkbox is selected, specify the starting IP address of the range in the <b>Source (first)</b> field and the ending IP address in the <b>Source (last)</b> field.
Source	If the <b>IP address range</b> checkbox is not selected, specify the IP address of the host or subnet in the <b>Source</b> field. To specify an IP address add <b>/32</b> .
	To choose a device connected to the router's LAN at the moment, select the relevant IP address from the drop-down list (the field will be filled in automatically).
	The destination host/subnet IP address.
	If the <b>IP address range</b> checkbox is selected, specify the starting IP address of the range in the <b>Destination (first)</b> field and the ending IP address in the <b>Destination (last)</b> field.
Destination	If the <b>IP address range</b> checkbox is not selected, specify the starting IP address of the host or subnet in the <b>Destination</b> field. To specify an IP address add <b>/32</b> .
	To choose a device connected to the router's LAN at the moment, select the relevant IP address from the drop-down list (the field will be filled in automatically).
	Ports
Source	A port of the source IP address. You can specify one port, several ports separated by a comma, or a range of ports separated by a colon.
Destination	A port of the destination IP address. You can specify one port, several ports separated by a comma, or a range of ports separated by a colon.

Click the **Change** button.

To edit a rule for IP filtering, click the link to the relevant rule. On the opened page, change the needed parameters and click the **Change** button.

To remove a rule for IP filtering, click the link to the relevant rule. On the opened page, click the **Delete** button.

### **Virtual Servers**

On the **Firewall / Virtual servers** page, you can create virtual servers for redirecting incoming Internet traffic to a specified IP address in the local area network.

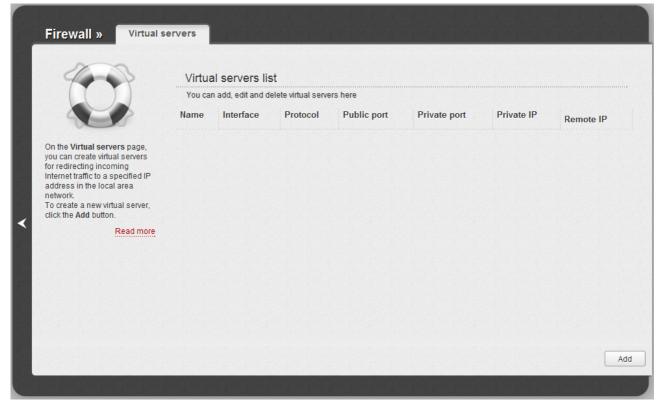

Figure 132. The Firewall / Virtual servers page.

To create a new virtual server, click the **Add** button.

	Firewall » Virtual s	servers		
~	<image/> <text><text></text></text>	Virtual server set	tings	
				Change

Figure 133. The page for adding a virtual server.

You can specify the following parameters:

Parameter	Description
Template	Select a virtual server template from the drop-down list, or select <b>Custom</b> to specify all parameters of the new virtual server manually.
Name	A name for the virtual server for easier identification. You can specify any name.
Interface	A WAN connection to which this virtual server will be assigned.
Protocol	A protocol that will be used by the new virtual server. Select a value from the drop-down list.
Public port (begin)/ Public port (end)	A port of the router from which traffic is directed to the IP address specified in the <b>Private IP</b> field. Specify the start and the end value for the port range. If you need to specify one port, enter the needed value in the <b>Public port (begin)</b> field and leave the <b>Public port (end)</b> field blank.
Private port (begin)/ Private port (end)	A port of the IP address specified in the <b>Private IP</b> field to which traffic is directed from the <b>Public port</b> . Specify the start and the end value for the port range. If you need to specify one port, enter the needed value in the <b>Private port (begin)</b> field and leave the <b>Private port (end)</b> field blank.

Parameter	Description
Private IP	The IP address of the server from the local area network. To choose a device connected to the router's LAN at the moment, select the relevant value from the drop-down list (the field will be filled in automatically).
Remote IP	The IP address of the server from the external network.

#### Click the **Change** button.

To edit the parameters of an existing server, follow the link with the name of the server. On the opened page, change the needed parameters and click the **Change** button.

To remove an existing server, follow the link with the name of the server. On the opened page, click the **Delete** button.

#### DMZ

A DMZ is a host or network segment located "between" internal (local) and external (global) networks. In the router, the DMZ implements the capability to transfer a request coming to a port of the router from the external network to a specified host of the internal network.

On the **Firewall / DMZ** page you can specify the IP address of the DMZ host.

	Firewall » DMZ				
		Demilitarized	zone settings		
		Enabled:			
		IP address:	8		
~	A DMZ is a host or network segment located "between" internal (local) and external (global) networks. In the router, the DMZ implements the capability to transfer a request coming to a port of the router from the external network to a specified host of the internal network. On the DMZ page, you can specify the IP address of the DMZ host.				
	Read more				
				100000	Change

Figure 134. The Firewall / DMZ page.

To enable the DMZ, select the **Enabled** checkbox, enter the IP address of a host from your network in the **IP address** field, and click the **Change** button.

Note that when the DMZ is enabled, all traffic coming to a port of the WAN interface of the router is directed to the same port of the specified IP address. Also note that virtual servers have higher priority than the DMZ host. In other words, if there has been created a virtual server that directs traffic from external port 80 to a port of the device from the router's local network, then entering **http://router\_WAN\_IP** in the address bar, users of the external network are directed to the specified port and IP address configured for the virtual server, but not to port 80 of the device with the IP address specified on the **Firewall / DMZ** page.

To disable the DMZ, deselect the **Enabled** checkbox and click the **Change** button.

### **MAC Filter**

On the **Firewall / MAC filter** page, you can configure MAC-address-based filtering for computers of the router's LAN.

Firewall » MAC fi	lter		
	MAC filter configuration

				Change

Figure 136. The page for adding an address for the MAC filter.

On the opened page, enter the MAC address of the device from the router's LAN in the **MAC** address field. To choose a device connected to the router's LAN at the moment, select the relevant value from the drop-down list (the field will be filled in automatically). Then select the **Deny** value from the **Action** drop-down list and click the **Change** button.

To remove an address from the list of MAC addresses for filtering, select the line with the relevant MAC address. On the opened page, click the **Delete** button.

### **USB Modem**

This menu is designed to operate USB modems.

If the PIN code check for the SIM card inserted into your USB modem is not disabled, then upon the first access to the pages of the **USB modem** menu (under the current web-interface session) the page for checking the PIN code is displayed<sup>6</sup>. Enter the PIN code in the relevant field and click the **Enter** button.

#### Information

On the **USB modem / Information** page, you can view data on the USB modem connected to the router.

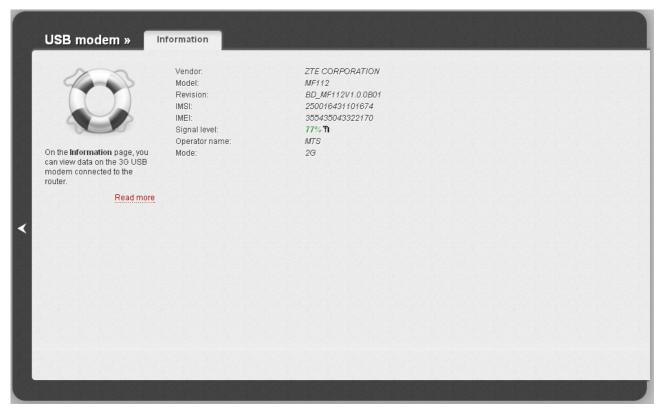

Figure 137. The USB modem / Information page.

When a USB modem is connected to the router, the following data are displayed on the page:

Parameter	Description
Vendor	The manufacturer of your USB modem.
Model         The alphanumeric code of the model of your USB model	
<b>Revision</b> The revision of the firmware of your USB modem.	

<sup>6</sup> For GSM USB modems only. For CDMA USB modems, it is required to disable the PIN code check on the identification card prior to connecting the USB modem to the router.

Parameter	Description
IMSI	The code stored in the SIM card inserted to your USB modem.
IMEI	The code stored in the memory of the USB modem.
Signal level	The signal level at the input of the modem's receiver. The zero signal level shows that you are out of the coverage area of the selected operator's network.
Operator name	When the needed network is available, the name of the operator is displayed in this field.
Mode	A type of the network to which the USB modem is connected (2G or 3G).

#### PIN

On the **USB modem / PIN** page, you can change the PIN code of the identification card inserted into your USB modem, disable or enable the check of the PIN code.

The operations presented on this page are not available for CDMA USB modems.

USB modem »	PIN code manageme	ent
<image/> <section-header><section-header><text></text></section-header></section-header>	Attempts left: PIN code: Disable PIN check: New PIN code: New PIN code confirmation:	
		Enter

Figure 138. The USB modem / PIN page.

To disable the PIN code check, select the **Disable PIN check** checkbox, enter the current PIN code in the **PIN code** field and click the **Enter** button.

To enable the PIN code check, deselect the **Disable PIN check** checkbox, enter the PIN code, used before disabling the check, in the **PIN code** field and click the **Enter** button.

To change the PIN code, enable the PIN code check, enter the current code in the **PIN code** field, then enter a new code in **New PIN code** and **New PIN code confirmation** fields and click the **Enter** button.

If upon one of the operations described above you have entered an incorrect value in the **PIN code** field three times (the number of remaining attempts is displayed in the **Attempts left** field), the identification card inserted into your USB modem is blocked.

	USB modem »	IN	
~	<image/> <section-header><section-header><section-header></section-header></section-header></section-header>	PIN code manageme Attempts left: PUK code: Disable PIN check: New PIN code: New PIN code confirmation:	
			Enter

Figure 139. Entering the PUK code.

For further use of the card, enter the PUK code in the relevant field, and then specify a new PIN code for your SIM card in the **New PIN code** and **New PIN code confirmation** fields. Click the **Enter** button.

### WiMAX

This menu is designed to operate WiMAX USB modems.

### Information

On the **WiMAX / Information** page, you can connect to the network of your WiMAX ISP to establish a high-speed wireless connection to the Internet.

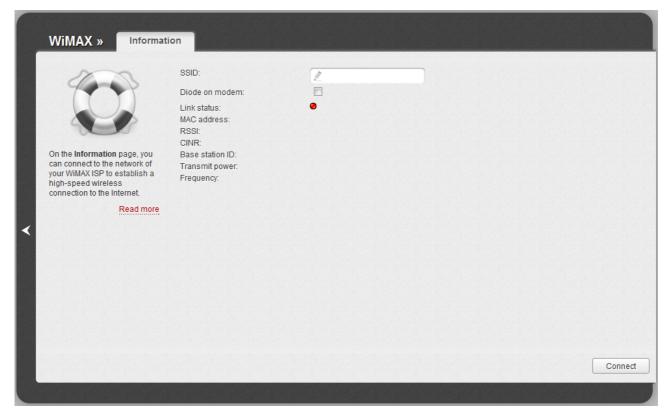

Figure 140. The WiMAX / Information page.

The following fields and controls are available on the page:

Parameter	Description	
SSID	An identifier for the WiMAX network. Specify the parameter if your WiMAX ISP requires this.	
Diode on modem	Select the checkbox to enable the modem's LED indicator.	
	The state of connection to the WiMAX network.	
Link status	<b>Red light</b> : The connection is not established.	
	Yellow light: The USB modem is connecting to the network.	
	Green light: The connection is established.	
MAC addressThe MAC address of the WiMAX USB modem.		

Parameter	Description	
RSSI	The signal level at the input of the modem's receiver.	
CINR	The relation of the signal level to the noise level. This parameter is used to measure the quality of the signal.	
Base station ID	The identifier of the base station.	
Transmit power	The signal level at the output of the modem's receiver.	
Frequency	The frequency of the signal transmitted by the modem's receiver.	
Connect	Click the button to connect to the WiMAX network. Beforehand, you need to create a WAN connection with relevant parameters. <i>The button is displayed when the connection is not established.</i>	
Disconnect	Click the button to disconnect from the WiMAX network. The button is displayed when the connection is established or is being established.	

To save the values of the **SSID** and **Diode on modem** field, click the **Connect** button.

# **USB** Storage

This menu is designed to operate USB storages. Here you can do the following:

- view data on the connected USB storage
- view content of the connected USB storage and configure access to it
- configure the router as a print server
- enable the built-in FTP server of the router.

### Information

On the **USB storage / Information** page, you can view data on the USB storage connected to the router.

USB storage »	nformation		
	Information abo	out USB storage	
	USB storage: Name: Total size:	usb1_1 7468 Mbyte	
On the <b>Information</b> page, you can view data on the USB storage connected to the router.	Free size: File system:	3999 Mbyte fat16/32	
Read more			
			Unmount storage

Figure 141. The USB storage / Information page.

The following data are presented on the page: the name, total and free space of the storage, and the type of its file system.

If the USB storage is divided into volumes, several values are displayed in the **USB storage** dropdown list. Select the needed value to view data on the volume (partition) of the USB storage.

To safely disconnect the USB storage, click the **Unmount storage** button. When the **No** value is displayed in the **USB storage** drop-down list, remove the storage from the router.

To disconnect one volume of the storage, select the needed value from the **USB storage** dropdown list and click the **Unmount volume** button.

#### **Filebrowser**

On the **USB storage / Filebrowser** page, you can view the content of your USB storage connected to the router and remove separate folders and files from the USB storage.

USB sto	orage »	Filebrowser					
1		usb1_1 (7468 KB)	Name	Size	Туре	Date modified	
can view the USB storage router and re	owser page, you content of your connected to the move separate les from the USB						
<	Read more						

Figure 142. The USB storage / Filebrowser page.

To view the content of the USB storage, click the link with the name of the storage or storage partition. The list of folders and files will be displayed on the page.

To proceed to a folder, select it in the directory structure on the left part of the page.

To remove a folder or file, click the **delete** link in the line corresponding to this folder or file.

For content of ext2 or ext3 storages or storage partitions, the **Change rule** link is displayed on the page. Click the link and in the opened window select a user to which you allow access to this folder or file. Then click the **Apply** button.

#### **Print Server**

On the **USB storage / Print-server** page, you can configure the router as a print server. Being configured in this way, the router will allow your LAN users to share the printer connected to the USB port of the router.

To connect a printer to the router, power off both devices. Connect printer to the USB port of the router, power on the printer, then power on the router.

USB storage »	Print-server
	Print-server settings
	Enable/Disable print-server:
For these settings, there is no documentation	
<	
	Change

Figure 143. The USB storage / Print-server page.

To configure the router as a print server, select the **Enable/Disable print-server** checkbox and click the **Change** button.

If you don't want to use the router as a print server, deselect the **Enable/Disable print-server** checkbox and click the **Change** button.

### FTP

On the **USB storage / FTP** page, you can enable the built-in FTP server of the router to provide access to the USB storage for users of your LAN.

USB storage »	FTP		
2003	Configuring FT	P-server	
	USB storage: Enable:	Connected	
	Port:	<u></u> 21	
For these settings, there is no documentation			
			Chang

Figure 144. The USB storage / FTP page.

You can enable the FTP server only when a USB storage is connected to the router (in this case, the **Connected** value is displayed in the **USB storage** field). Select the **Enable** checkbox; if needed, change the router's port used by the FTP server in the **Port** field (by default, the standard port **21** is specified). Then click the **Change** button.

To allow access to the content of the USB storage for users of your LAN, proceed to the **System / Users** page and create needed accounts.

To disable the built-in FTP server of the router, deselect the **Enable** checkbox and click the **Change** button.

# Torrent

In this menu you can configure the built-in torrent client and manage distributing and downloading processes.

## **Torrent-client**

On the **Torrent / Torrent-client** page, you can add new torrent files to the system, start and stop downloading files to the USB storage connected to the router, and view data on the files that are being downloaded.

To add a new torrent file, click the **Choose/Browse<sup>7</sup>** button on the **Add new** tab and select a file stored on your PC. Select the **Run after adding** checkbox to start downloading right after adding the torrent file. Then click the **Add file** button.

	Torrent » Torrent-cl		All Active	Inactive		
		Select torrent-file:	Choose V			
~	On the <b>Torrent-client</b> page, you can add new torrent files to the system, start and stop downloading files to the USB souter, and view data on the tiles that are being downloaded.					

Figure 145. The Torrent / Torrent-client page. The Add new tab.

The **All**, **Active**, and **Inactive** tabs are designed for managing the files that are being downloaded and view data on them. On the tabs, you can start downloading for all files presented on the tab (click the **Start all** button), stop downloading (click the **Stop all** button), or delete all files presented on the tab (click the **Delete all** button).

To view data on a file, select it in the list on the relevant tab.

To start or stop downloading, click the **Start/Stop** button.

<sup>7</sup> The name of the button depends upon the web browser that you use.

To remove a file (torrent) from the USB storage, click the **Delete** button.

To close the file data and return to the list, click the **Back to list** button.

### **Settings**

On the Torrent / Settings page, you can configure the built-in torrent client.

Torrent » Settings				
	General			
	Service on:			
	Empty start: Work folder:			
On the Settings page, you can configure the built-in torrent client. <u>Read more</u>	Connection type: Tracker IP:	usb1_1 IPv4 ▼		
	Port.*	<ul><li>∠</li><li>6881</li></ul>

	Limit incoming traffic (KB/s):*	20		
	Limit outgoing traffic (KB/s):*	20		
	Max peers count.*	20		
	Control uploads:	Default	•	
	Want peers count:*	2 50		
				Sa

Figure 146. The Torrent / Settings page.

You can specify the following parameters:

Parameter	Description		
	General		
Service on	Select the checkbox to start the torrent client. If the checkbox is not selected, you cannot download files and view contents of the tabs from the <b>Torrent / Torrent-client</b> page.		
Empty start	Select the checkbox to forbid the torrent client to renew downloading files upon its start.		
Work folder	Select the USB storage folder to which the files that are being downloaded will be saved.		
Connection type	Select a version of the Internet Protocol which will be used for downloading and transmitting files.		
Tracker IP	In the field, you can specify the IP address of the preferred tracker.		

Parameter	Description			
Port	Enter the port of the router which will be used by the torrent client By default, the standard port is specified (6881).			
	Transfer			
Limit incoming traffic	Specify the maximum rate for downloading files.			
Limit outgoing traffic	Specify the maximum rate for uploading files.			
Max peers count	Specify the maximum number of the torrent service users from which you can download files.			
	Select a way for uploading files to other users:			
	<b>Default</b> : uploading is not limited.			
Control uploads	Upload to every interested peer.			
	Don't upload.			
	Set peers count: when this value is selected, the Max upload peers field is displayed.			
Want peers count	Specify the desired number of the torrent service users from which you can download files.			

After specifying the needed parameters, click the **Save** button. After that the torrent client will be restarted in accordance with the specified settings.

### Control

This menu is designed to create restrictions on access to certain web sites.

### **URL Filter**

On the Control / URL filter page, you can specify restrictions on access to certain web sites.

	Control » URL filter	» Configuration	JRL addresses	
		URL filter configurati	on	
		Enable/Disable URL filter:		
		URL filter type:	Block listed URLs	<b>_</b>
	On the URL filter page, you can specify restrictions on access to certain web sites.	Change		
	Read more			
<				

Figure 147. The Control / URL filter page. The Configuration tab.

To enable the URL filter, select the **Enable/Disable URL filter** checkbox on the **Configuration** tab, then select a needed mode from the **URL filter type** drop-down list:

- **Block listed URLs**: when this value is selected, the router blocks access to all addresses specified on the **URL addresses** tab;
- **Block all URLs except listed**: when this value is selected, the router allows access to addresses specified on the **URL addresses** tab and blocks access to all other web sites.

Click the **Change** button.

To specify URL addresses to which the selected filtering will be applied, go to the **URL** addresses tab and click the **Add** button.

	Control » URL filter »	Configuration URL addresses	
		URL addresses list You can add, edit and delete addresses here URL address

Enter a URL address in the **URL address** field and click the **Save** button.

To remove an address from the list of URL addresses, select the relevant address in the table on the **URL addresses** tab and click the **Delete** button.

To disable the URL filter, deselect the **Enable/Disable URL filter** checkbox on the **Configuration** tab, then click the **Change** button.

### System

In this menu you can do the following:

- change the password used to access the router's settings
- save the current settings to the non-volatile memory
- create a backup of the router's configuration
- restore the router's configuration from a previously saved file
- restore the factory default settings
- view the system log
- update the firmware of the router
- configure automatic synchronization of the system time
- check availability of a host on the Internet through the web-based interface of the router
- trace the route to a host
- allow or forbid access to the router via TELNET
- create accounts for users to allow access to the content of the USB storage.

### **Administrator Password**

On the **System / Administrator password** page, you can change the password for the administrator account used to access the web-based interface of the router and to access the device settings via TELNET.

For security reasons, it is strongly recommended to change the administrator password upon initial configuration of the router.

	System » Adminis	trator password			
	TTT	System passwor	d and the password for the web-based inter	face will be changed at the same time	
		Login:	admin 🚽	nace win be changed at the same time.	
		Password:*	1		
	On the Administrator password page, you can	Confirmation:*	2		
~	change the password for the administrator account used to access the web-based interface of the router. <u>Read more</u>				Save

Figure 150. The page for modifying the administrator password.

Enter the new password in the **Password** and **Confirmation** fields and click the **Save** button.

### Configuration

On the **System / Configuration** page, you can save the changed settings to the non-volatile memory, restore the factory defaults, backup the current configuration, or restore the router's configuration from a previously created file.

Sy	/stem » Configur	ration			
you	the Configuration page, can save the changed	Save current settings: Reset to factory defaults: Saving current configuration in a file Loading previously saved configuration to device:	Save Factory Backup	Choose Restore	
sett mei defa con rout	tings to the non-volatile mory, restore the factory aults, backup the current inguration, or restore the ter's configuration from a viously created file. <u>Read more</u>				

Figure 151. The System / Configuration page.

The following buttons are available on the page:

Control	Description
Save	Click the button to save settings to the non-volatile memory. Please, save settings every time you change the router's parameters. Otherwise the changes will be lost upon hardware reboot of the router.
Factory	Click the button to restore the factory default settings. Also you can restore the factory defaults via the hardware <b>RESET</b> button (see the <i>Saving and Restoring Settings</i> section, page 33).
Backup	Click the button and follow the dialog box appeared to save the configuration (all settings of the router) to your PC.
Restore	Click the button to upload a previously saved configuration (all settings of the router) from a file on your PC. Click the <b>Choose/Browse</b> <sup>8</sup> button to select a previously saved configuration file located on your PC.

Actions of the **Save**, **Factory**, and **Backup** buttons also can be performed via the top-page menu displayed when the mouse pointer is over the **System** caption.

<sup>8</sup> The name of the button depends upon the web browser that you use.

### System Log

On the **System / System log** page, you can set the system log options and configure sending the system log to a remote host.

	System » System lo	g » Configuration	Log	
<	<image/> <text></text>	Logging: Logging type: Logging level: Server:* Port:*	<ul> <li>Local and remote </li> <li>Informational messages </li> <li>514</li> </ul>	
				Change

Figure 152. The System / System log page. The Configuration tab.

To enable logging of the system events, select the **Logging** checkbox on the **Configuration** tab. Then specify the needed parameters.

Control	Description
	Select a type of logging from the drop-down list.
	• Local: the system log is stored in the router's memory (and displayed on the Log tab). When this value is selected, the Server and Port fields are not displayed.
Logging type	• <b>Remote</b> : the system log is sent to the remote host specified in the <b>Server</b> field.
	• Local and remote: the system log is stored in the router's memory (and displayed on the Log tab) and sent to the remote host specified in the Server field.
Logging level	Select a type of messages and alerts/notifications to be logged.
ServerThe IP or URL address of the host from the local or globa to which the system log will be sent.	

Control	Description
Port	A port of the host specified in the <b>Server</b> field. By default, the value <b>514</b> is specified.

After specifying the needed parameters, click the **Change** button.

To disable logging of the system events, deselect the **Logging** checkbox and click the **Change** button.

On the **Log** tab, the events specified in the **Logging level** list are displayed.

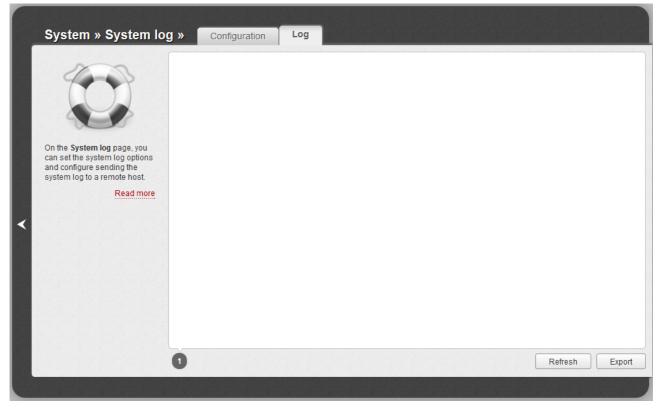

Figure 153. The System / System log page. The Log tab.

To view the latest system events, click the **Refresh** button.

To save the system log to your PC, click the **Export** button and follow the dialog box appeared.

### **Firmware Upgrade**

On the System / Firmware upgrade page, you can upgrade the firmware of the router.

Upgrade the firmware only when the router is connected to your PC via a wired connection.

	System » Firmward	e upgrade			
	On the Firmware upgrade	Select update file:	L	Choose	
~	page, you can upgrade the firmware of the router.				
					Update

Figure 154. The System / Firmware upgrade page.

The current version of the router's firmware is displayed in the **Firmware version** field located next the D-Link logo in the top left corner of the page. If you need to install a newer version of the firmware, follow the next steps:

- 1. Download a new version of the firmware from <u>www.dlink.ru</u>.
- 2. Click the **Choose/Browse<sup>9</sup>** button on the **System / Firmware upgrade** page to locate the new firmware file.
- 3. Click the **Update** button to upgrade the firmware of the router.
- 4. Wait until the router is rebooted (about one and a half or two minutes).
- 5. Log into the web-based interface using the login (admin) and the current password.

<sup>9</sup> The name of the button depends upon the web browser that you use.

- 6. Select the **Factory** line in the top-page menu displayed when the mouse pointer is over the **System** caption.
- 7. Wait until the router is rebooted. Log into the web-based interface, using the default IP address, login and password (**192.168.0.1**, **admin**, **admin**).

### **NTP Client**

On the **System / NTP client** page, you can configure automatic synchronization of the system time with a time server on the Internet.

System » NTP cli	ient		
	Enabled: Timezone: NTP servers:	(GMT +3 h.) Baghdad, Khartoum	J
On the NTP client page, you can configure automatic synchronization of the system time with a time server on the Internet.			
<			
			Change

Figure 155. The System / NTP client page.

To enable automatic synchronization with a time server:

- 1. Select the **Enabled** checkbox.
- 2. Select your time zone.
- 3. Specify the needed NTP server in the **NTP servers** field or leave the server specified by default.
- 4. Click the **Change** button.
  - When the router is powered off or rebooted, the system time is reset to the default value.If you have set automatic synchronization for the system time, the internal clock of the<br/>device will be configured after connecting to the Internet.

### Ping

On the **System / Ping** page, you can check availability of a host from the local or global network via the Ping utility.

The Ping utility sends echo requests to a specified host and receives echo replies.

	System » Ping		
*	<image/> <text></text>	Ping Background ping status: Background ping: Host Count of packets: Log:	
			Ping

Figure 156. The System / Ping page.

To check availability of a host, enter the IP address or name of this host in the **Host** field, and select a number of requests that will be sent in order to check its availability from the **Count of packets** drop-down list. Click the **Ping** button. The check results will be displayed in the **Log** field.

Also you can run the Ping function in the background mode. To do this, select the **Background ping** checkbox. Then enter the IP address or name of a host in the **Host** field and click the **Ping** button. When this mode is selected, the **Count of packets** and **Log** fields are not displayed.

In the background mode, the Ping utility sends requests to the host specified in the **Host** field every 40 seconds. The **Background ping status** light shows the status of the Ping function (green light: the function is running, red light: the function is not running).

To stop running the Ping function in the background mode, deselect the **Background ping** checkbox, enter the IP address or name of a host in the **Host** field, and click the **Ping** button.

### Traceroute

On the **System / Traceroute** page, you can define the route of data transfer to a host via the traceroute utility.

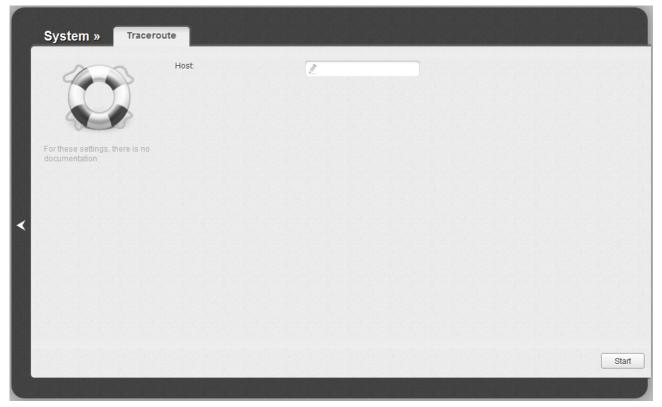

Figure 157. The System / Traceroute page.

To define the route, enter the name or IP address of a host in the **Host** field and click the **Start** button. After a while, the results will be displayed on the page.

### Telnet

On the **System / Telnet** page, you can enable or disable access to the device settings via TELNET from your LAN. By default, access is enabled.

System » Tel	net		
	Telnet		
	On: Port.*	V 23	
On the <b>Telnet</b> page, you ca enable or disable access to the device settings via TELI from your LAN.	D		
Read n	nore		
			Change

Figure 158. The System / Telnet page.

To disable access via TELNET, deselect the **On** checkbox and click the **Change** button.

To enable access via TELNET again, select the **On** checkbox. In the **Port** field, enter the number of the router's port through which access will be allowed (by default, the port **23** is specified). Then click the **Change** button.

### Users

On the **System / Users** page, you can create user accounts to provide access to data on the USB storage connected to the router.

System » Users				
4	Users			
	Login	Password	Read only	
On the Users page, you can create user accounts to provide access to data on the USB storage connected to the router.				
Read more				
				Add

Figure 159. The System / Users page.

To create a new user account, click the **Add** button.

System » Users				
	Edit user			
	Login: Password:	2		
On the Users page, you can	Read only:			
create user accounts to provide access to data on the USB storage connected to the router.

				Save

#### Figure 160. The page for adding a user.

On the opened page, specify a username and password for the account in the relevant fields. You can use letters of the Latin and Russian alphabets (uppercase and/or lowercase) and digits.

# You cannot create accounts with the following usernames: ftp, admin, support, user, nobody.

To change the password of an account, select the relevant line in the table. On the opened page, enter a new value in the **Password** field and click the **Save** button.

To delete an account, select a relevant line in the table. On the opened page, click the **Delete** button.

For ext2 or ext3 storages or storage partitions, it is possible to create users with limited rights. Select the **Read only** checkbox not to let the user create, change, or delete files.

In addition, by default, users with accounts from this page cannot access ext2 or ext3 storages or storage partitions. To configure access, it is necessary to proceed to the **USB storage / Filebrowser** page and assign relevant rights.

# **CHAPTER 5. OPERATION GUIDELINES**

### Supported USB Modems

#### GSM modems:

- Huawei E1550
- Huawei E160G
- Huawei E169G
- Huawei E171
- Huawei E220
- ZTE MF112
- ZTE MF192
- ZTE MF626
- ZTE MF627
- ZTE MF652
- ZTE MF668
- ZTE MF752.

#### **CDMA modems**<sup>10</sup>:

- Airplus MCD-650
- Airplus MCD-800
- AnyDATA ADU-300A
- AnyDATA ADU-310A
- Axesstel MV110
- Ubiquam UM-400
- WeTelecom WM-D200.

#### WiMAX modem:

• Samsung SWC-U200 (firmware version *u200\_rev1-2.7.40-CI14*).

<sup>10</sup> Performance of CDMA USB modems is not tested for the current firmware version.

## Safety Instructions

Place your router on a flat horizontal surface or mount the router on the wall (the mounting holes are located on the bottom panel of the device). Make sure that the router is provided with sufficient ventilation.

To prevent overheating, do not obstruct the ventilation openings of the router.

Plug the router into a surge protector to reduce the risk of damage from power surges and lightning strikes.

Operate the router only from an electrical outlet with the correct power source as indicated on the adapter.

Do not open the cover of the router. Otherwise any warranty will be invalidated.

Unplug the equipment before dusting and cleaning. Use a damp cloth to clean the equipment. Do not use liquid/aerosol cleaners or magnetic/static cleaning devices.

### Wireless Installation Considerations

The DIR-620 device lets you access your network using a wireless connection from virtually anywhere within the operating range of your wireless network. Keep in mind, however, that the number, thickness and location of walls, ceilings, or other objects that the wireless signals must pass through, may limit the range. Typical ranges vary depending on the types of materials and background RF noise in your home or office. To maximize your wireless range, follow the guidelines below.

- 1. Keep the number of walls and ceilings between the DIR-620 device and other network devices to a minimum each wall or ceiling can reduce your wireless network range by 3-90 feet (1-30 meters).
- 2. Be aware of the direct line between network devices. Place your devices so that the signal travels straight through a wall or ceiling (instead of at an angle) for better reception.
- 3. Building materials make a difference. A solid metal door or aluminum studs may have a negative effect on your wireless range. Try to position your router, access points, and computers so that the signal passes through drywalls or open doorways. Materials and objects such as glass, steel, metal, walls with insulation, water (fish tanks), mirrors, file cabinets, brick, and concrete will degrade your wireless signal.
- 4. Keep your router away (at least 3-6 feet or 1-2 meters) from electrical devices or appliances that generate RF noise.
- 5. If you are using 2.4 GHz cordless phones or X-10 equipment (wireless devices such as ceiling fans, lights, and home security systems), your wireless connection may degrade dramatically or drop completely. Make sure your 2.4 GHz phone base is as far away from your wireless devices as possible. Note, that the base transmits a signal even if the phone in not in use.

### Connecting to Cable or DSL Modem

If you need to connect the router to a cable or DSL modem, do the following.

- 1. Place the router in an open location in the supposed center of your wireless network. Do not plug the power adapter into the router.
- 2. Turn off your PC.
- 3. Unplug the Ethernet cable (that connects your PC to your modem) from your computer and place it into the **INTERNET** port of your router.
- 4. Plug another Ethernet cable into one of the four LAN ports on the router. Plug the other end into the Ethernet port of your PC.
- 5. Turn on your modem. Wait until the modem is booted (about 30 seconds).
- 6. Plug the power adapter to the router and connect to an electrical outlet or power strip. Wait until the router is booted (about 30 seconds).
- 7. Turn on your PC.
- 8. Verify the LEDs of the router. The following LEDs should be on: **Power**, **LAN** (of the relevant Ethernet port), and **Internet**. If not, make sure that your computer, modem, and router are powered on and the relevant cables are connected correctly.

# CHAPTER 6. ABBREVIATIONS AND ACRONYMS

3G	Third Generation	
AC	Access Category	
AES	Advanced Encryption Standard	
ARP	Address Resolution Protocol	
BSSID	Basic Service Set Identifier	
CDMA	Code Division Multiple Access	
CINR	Carrier to Interference + Noise Ratio	
CRC	Cyclic Redundancy Check	
DDNS	Dynamic Domain Name System	
DDoS	Distributed Denial of Service	
DHCP	Dynamic Host Configuration Protocol	
DMZ	DeMilitarized Zone	
DNS	Domain Name System	
DTIM	Delivery Traffic Indication Message	
GMT	Greenwich Mean Time	
GSM	Global System for Mobile Communications	
IGMP	Internet Group Management Protocol	
IMEI	International Mobile Equipment Identity	
IMSI	International Mobile Subscriber Identity	
IP	Internet Protocol	
ISP	Internet Service Provider	
L2TP	Layer 2 Tunneling Protocol	
LAN	Local Area Network	
LCP	Link Control Protocol	
MAC	Media Access Control	
МТU	Maximum Transmission Unit	
NAT	Network Address Translation	
NTP	Network Time Protocol	
РВС	Push Button Configuration	
PIN	Personal Identification Number	

PPPoE	Point-to-point protocol over Ethernet	
PPTP	Point-to-point tunneling protocol	
PSK	Pre-shared key	
PUK	PIN Unlock Key	
QoS	Quality of Service	
R-UIM	Removable User Identity Module	
RADIUS	Remote Authentication in Dial-In User Service	
RIP	Routing Information Protocol	
RSSI	Received Signal Strength Indicator	
RTS	Request To Send	
SIM	Subscriber Identification Module	
SSID	Service Set Identifier	
ΤΚΙΡ	Temporal Key Integrity Protocol	
UDP	User Datagram Protocol	
UPnP	Universal Plug and Play	
URL	Uniform Resource Locator	
USB	Universal Serial Bus	
VLAN	Virtual Local Area Network	
WAN	Wide Area Network	
WEP	Wired Equivalent Privacy	
Wi-Fi	Wireless Fidelity	
WiMAX	Worldwide Interoperability for Microwave Access	
WISP	Wireless Internet Service Provider	
WLAN	Wireless Local Area Network	
WMM	Wi-Fi Multimedia	
WPA	Wi-Fi Protected Access	
WPS	Wi-Fi Protected Setup
