

DIR-825/AC

**Wireless AC1200 Dual Band Gigabit Router
with 3G/LTE Support and USB Port**

BEFORE YOU BEGIN

Delivery Package

- Router DIR-825/AC
- Power adapter DC 12V/1.5A
- Ethernet cable (CAT 5E)
- “***Quick Installation Guide***” (brochure).

If any of the items are missing, please contact your reseller.

The “***User Manual***” and “***Quick Installation Guide***” documents are available on D-Link website (see www.dlink.ru).

Using a power supply with a different voltage rating than the one included will cause damage and void the warranty for this product.

Default Settings

Name of wireless network (SSID)	IP address of wireless router	192.168.0.1
	Username (login)	admin
	Password	admin
	2.4GHz	DIR-825
Network key (PSK)	5GHz	DIR-825-5G
		see WPS PIN on the barcode label on the bottom panel of the device

For security reasons, DIR-825/AC with default settings cannot connect to the Internet. To get started, please set your own password used to access the web-based interface and, if needed, configure other settings recommended by your ISP.

System Requirements and Equipment

- A computer with any operating system that supports a web browser.
- A web browser to access the web-based interface of the router:
 - Apple Safari 5 and later
 - Google Chrome 10 and later
 - Microsoft Internet Explorer 9 and later
 - Microsoft Edge 20.10240 and later
 - Mozilla Firefox 10 and later
 - Opera 10 and later.
- A NIC (Ethernet or Wi-Fi adapter) to connect to the router.
- An 802.11a, b, g, n, or ac Wi-Fi adapter to create a wireless network.
- A USB modem (when it is necessary to connect to the Internet via mobile operators' networks)¹.

Your USB modem should be equipped with an active identification card (SIM or R-UIM) of your operator.

Some operators require subscribers to activate their USB modems prior to using them. Please, refer to connection guidelines provided by your operator when concluding the agreement or placed on its website.

For LTE and CDMA USB modems, it is required to disable the PIN code check on the identification card prior to connecting the USB modem to the router.

¹ Contact your operator to get information on the service coverage and fees.

Supported USB Modems

GSM modems

- Alcatel X500
- D-Link DWM-152C1
- D-Link DWM-156A6
- D-Link DWM-156A7
- D-Link DWM-156C1
- D-Link DWM-157B1
- D-Link DWM-157B1 (Velcom)
- D-Link DWM-158D1
- D-Link DWR-710
- Huawei E150
- Huawei E1550
- Huawei E156G
- Huawei E160G
- Huawei E169G
- Huawei E171
- Huawei E173 (Megafon)
- Huawei E220
- Huawei E352 (Megafon)
- Prolink PHS600
- ZTE MF112
- ZTE MF192
- ZTE MF626
- ZTE MF627
- ZTE MF652
- ZTE MF667
- ZTE MF668
- ZTE MF752

CDMA modems²

- Airplus MCD-650
- Airplus MCD-800
- AnyDATA ADU-300A
- AnyDATA ADU-500A
- AnyDATA ADU-510A
- Huawei EC306
- ZTE AC5710
- ZTE AC5730

LTE modems

- Huawei E3131
- Huawei E3272
- Huawei E3351
- Huawei E3372
- Huawei E367
- Huawei E392
- Megafon M100-1
- Megafon M100-2
- Megafon M100-3
- Megafon M100-4
- Megafon M150-1
- Megafon M150-2
- MTS 824F
- MTS 827F
- Quanta 1K6E (Beeline 1K6E)
- Yota LU-150
- Yota WLTUBA-107
- ZTE MF823
- ZTE MF827

Smartphones in USB tethering mode

- Some models of Android smartphones

The manufacturer does not guarantee proper operation of the router with every modification of the firmware of USB modems.

² Performance of CDMA USB modems is not tested for the current firmware version.

CONNECTING TO PC

PC with Ethernet Adapter

1. Make sure that your PC is powered off.
2. Connect an Ethernet cable between any of LAN ports located on the back panel of the router and the Ethernet port of your PC.
3. **To connect via USB modem:** connect your USB modem to the USB port³ located on the back panel of the router.

If you need to connect or change a USB modem to another one when the router is powered on, power off the router, connect the modem to the USB port, and power on the router.

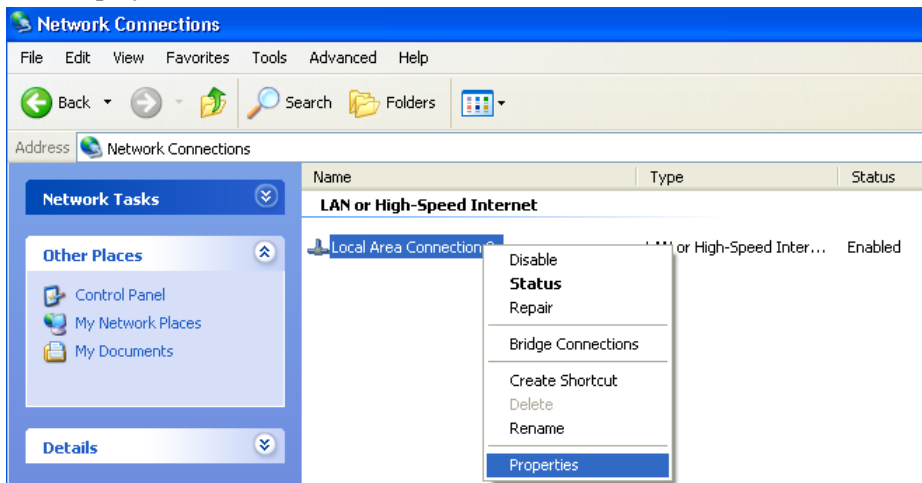

4. Connect the power cord to the power connector port on the back panel of the router, then plug the power adapter into an electrical outlet or power strip.
5. Turn on the router by pressing the **POWER** button on its back panel.
6. Turn on your PC and wait until your operating system is completely loaded.

Now you should configure your PC to obtain an IP address automatically (as DHCP client).

³ It is recommended to use a USB extension cable to connect a USB modem to the router.

Obtaining IP Address Automatically in OS Windows XP

1. Click the **Start** button and proceed to the **Control Panel > Network and Internet Connections > Network Connections** window.
2. In the **Network Connections** window, right-click the relevant **Local Area Connection** icon and select the **Properties** line in the menu displayed.

3. In the **Local Area Connection Properties** window, on the **General** tab, select the **Internet Protocol (TCP/IP)** line. Click the **Properties** button.

4. Select the **Obtain an IP address automatically** and **Obtain DNS server address automatically** radio buttons. Click the **OK** button.

5. Click the **OK** button in the connection properties window.
Now your computer is configured to obtain an IP address automatically.

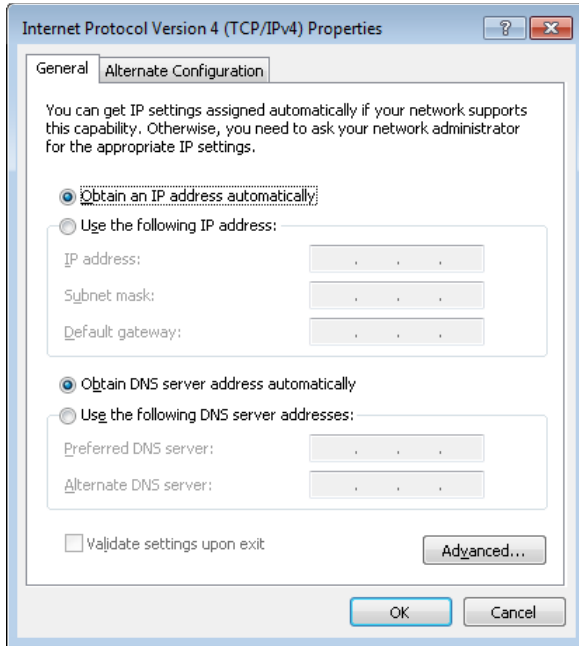

Obtaining IP Address Automatically in OS Windows 7

1. Click the **Start** button and proceed to the **Control Panel** window.
2. Select the **Network and Sharing Center** section. (If the Control Panel has the category view (the **Category** value is selected from the **View by** drop-down list in the top right corner of the window), choose the **View network status and tasks** line under the **Network and Internet** section.)
3. In the menu located on the left part of the window, select the **Change adapter settings** line.
4. In the opened window, right-click the relevant **Local Area Connection** icon and select the **Properties** line in the menu displayed.

5. In the **Local Area Connection Properties** window, on the **Networking** tab, select the **Internet Protocol Version 4 (TCP/IPv4)** line. Click the **Properties** button.

6. Select the **Obtain an IP address automatically** and **Obtain DNS server address automatically** radio buttons. Click the **OK** button.

7. Click the **OK** button in the connection properties window.
- Now your computer is configured to obtain an IP address automatically.

PC with Wi-Fi Adapter

1. **To connect via USB modem:** connect your USB modem to the USB port⁴ located on the back panel of the router.

If you need to connect or change a USB modem to another one when the router is powered on, power off the router, connect the modem to the USB port, and power on the router.

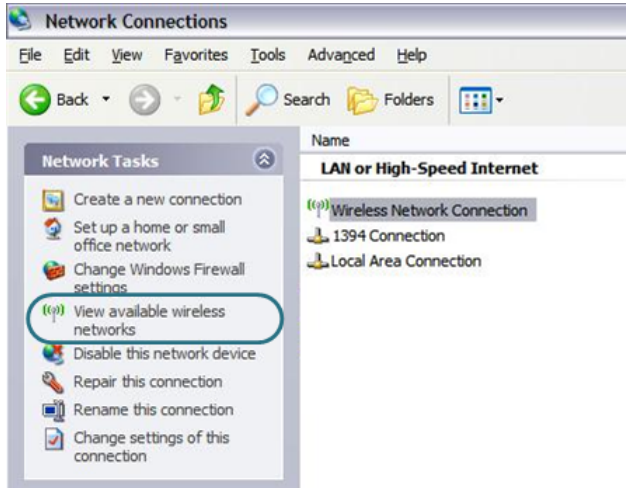

2. Connect the power cord to the power connector port on the back panel of the router, then plug the power adapter into an electrical outlet or power strip.
3. Turn on the router by pressing the **POWER** button on its back panel.
4. Turn on your PC and wait until your operating system is completely loaded.
5. Turn on your Wi-Fi adapter. As a rule, modern notebooks with built-in wireless NICs are equipped with a button or switch that turns on/off the wireless adapter (refer to your PC documents). If your PC is equipped with a pluggable wireless NIC, install the software provided with your Wi-Fi adapter.

Now you should configure your Wi-Fi adapter.

⁴ It is recommended to use a USB extension cable to connect a USB modem to the router.

Configuring Wi-Fi Adapter in OS Windows XP

1. Click the **Start** button and proceed to the **Control Panel > Network and Internet Connections > Network Connections** window.
2. Select the icon of the wireless network connection and make sure that your Wi-Fi adapter is on.

3. Search for available wireless networks.
4. In the opened **Wireless Network Connection** window, select the wireless network **DIR-825** (for operating in the 2.4GHz band) or **DIR-825-5G** (for operating in the 5GHz band) and click the **Connect** button.
5. In the opened window, enter the network key (see WPS PIN on the barcode label on the bottom panel of the device) in the **Network key** and **Confirm network key** fields and click the **Connect** button.

After that the **Wireless Network Connection Status** window appears.

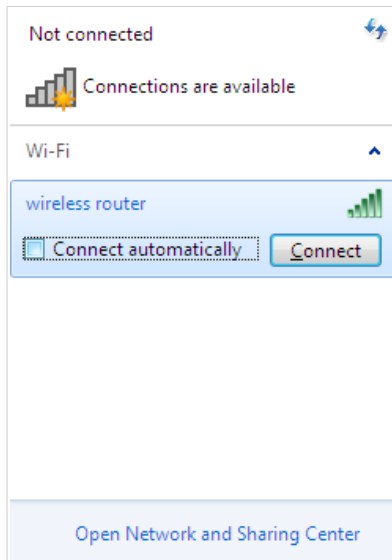

If you perform initial configuration of the router via Wi-Fi connection, note that immediately after changing the wireless default settings of the router you will need to reconfigure the wireless connection using the newly specified settings.

Configuring Wi-Fi Adapter in OS Windows 7

1. Click the **Start** button and proceed to the **Control Panel** window.
2. Select the **Network and Sharing Center** section. (If the Control Panel has the category view (the **Category** value is selected from the **View by** drop-down list in the top right corner of the window), choose the **View network status and tasks** line under the **Network and Internet** section.)
3. In the menu located on the left part of the window, select the **Change adapter settings** line.
4. In the opened window, select the icon of the wireless network connection and make sure that your Wi-Fi adapter is on.
5. To open the list of available wireless networks, select the icon of the wireless network connection and click the **Connect To** button or left-click the network icon in the notification area located on the right side of the taskbar.

6. In the opened window, in the list of available wireless networks, wireless network **DIR-825** (for operating in the 2.4GHz band) or **DIR-825-5G** (for operating in the 5GHz band) and click the **Connect** button.

7. In the opened window, enter the network key (see WPS PIN on the barcode label on the bottom panel of the device) in the **Security key** field and click the **OK** button.
8. Wait for about 20-30 seconds. After the connection is established, the network icon will be displayed as the signal level scale.

If you perform initial configuration of the router via Wi-Fi connection, note that immediately after changing the wireless default settings of the router you will need to reconfigure the wireless connection using the newly specified settings.

CONFIGURING ROUTER

Connecting to Web-based Interface

Start a web browser. In the address bar of the web browser, enter the IP address of the router (by default, the following IP address is specified: **192.168.0.1**). Press the **Enter** key.

If the error “*The page cannot be displayed*” (or “*Unable to display the page*”/“*Could not connect to remote server*”) occurs upon connecting to the web-based interface of the router, make sure that you have properly connected the router to your computer.

After the first access to the web-based interface you need to change the default administrator password. Enter the new password in the **Password** and **Confirmation** fields. You may set any password except **admin**. Use digits, Latin letters (uppercase and/or lowercase), and characters available on the keyboard. Also you need to change the default name of the wireless network. To do it, in the **Network name (SSID)** and **5GHz Network name (SSID)** fields, enter a new name for the router's wireless network in the 2.4GHz and 5GHz band correspondingly or leave the values suggested by the router: **DIR-825-XXXX** and **DIR-825-5G-XXXX** where **XXXX** are the last 4 characters of the device's MAC address. Then click the **Apply** button.

Please, change default password

Password

Confirmation

Please, change default SSID

Network name (SSID)

5 GHz Network name (SSID)

Remember or write down the new password for the administrator account. In case of losing the new password, you can access the settings of the router only after restoring the factory default settings via the hardware **RESET** button. This procedure wipes out all settings that you have configured for your router.

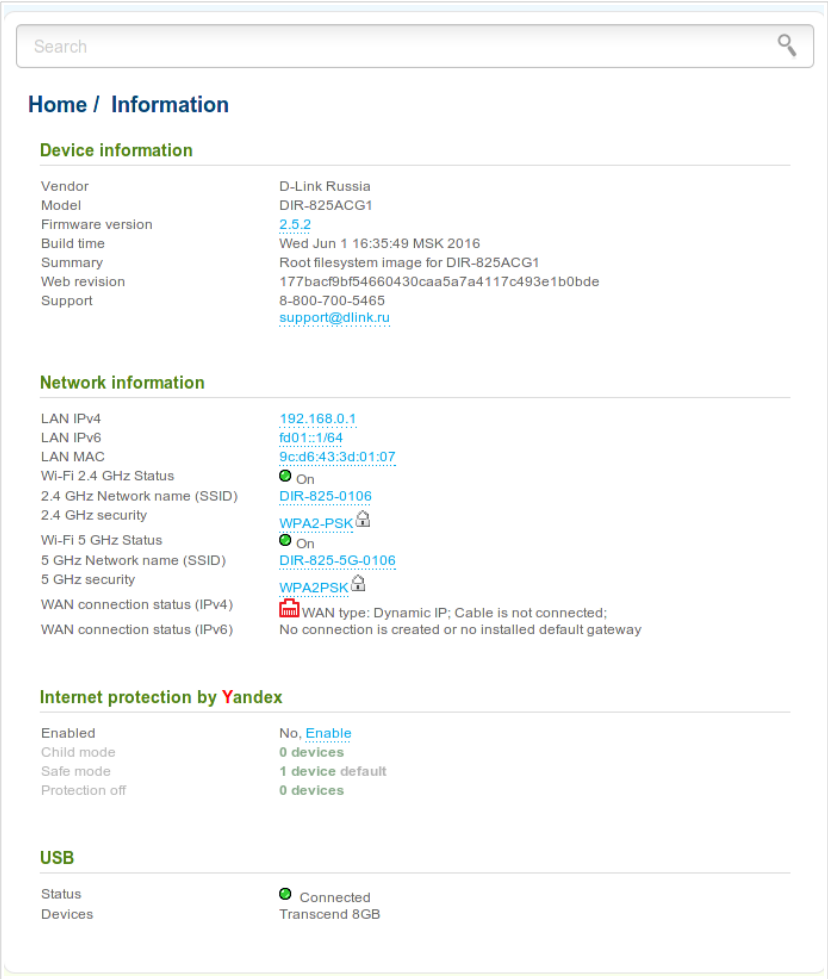

When the web-based interface is accessed the next time and after, the login page opens. Enter the username (**admin**) in the **Login** field and the new password in the **Password** field, then click the **Enter** button.

D-LINK DEVICE

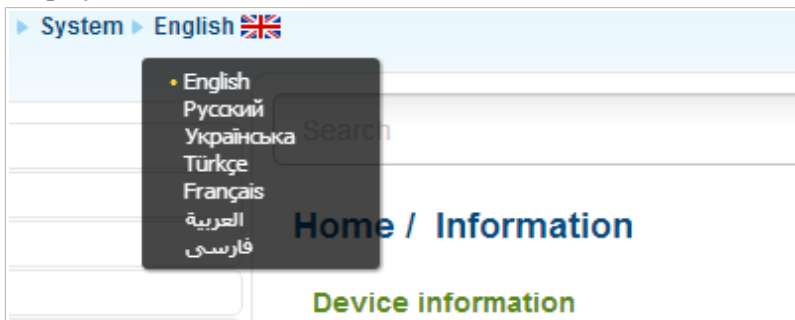

Login

Password

After successful registration the **Home / Information** page opens. The page displays general information on the router and its software.

The web-based interface of the router is multilingual. If you need to select another language for the web-based interface, place the mouse pointer over the **English** caption in the top part of the page and select a language from the menu displayed.

To configure the router use the menu in the left part of the page. Go to the relevant section and select the needed page or run the needed Wizard in the **Home** section.

Also you can find a specific page via search. To do this, enter the name of the page, wholly or partly, in the search bar in the top part of the web-based interface page, and then select a needed link in the search results.

Configuring Connection to the Internet

You should configure your WAN connection in accordance with data provided by your Internet service provider (ISP). Make sure that you have obtained all necessary information prior to configuring your connection. Otherwise contact your ISP.

LTE WAN Connection

If the PIN code check is enabled for the SIM card inserted into your LTE USB modem, it is required to disable the PIN code check on the identification card prior to connecting the USB modem to the router.

An active LTE WAN connection will be automatically created on the **Net / WAN** page when connecting a USB modem to the router. If the connection has not been created automatically, create a new connection manually.

For the USB modem Megafon M100-1, please reboot the router after creating the WAN connection.

1. Go to the **Net / WAN** page and click the **Add** button.
2. In the **General settings** section, in the **Provider** drop-down list, leave the **Manually** value.
3. From the **Connection Type** drop-down list, select the **LTE** value.
4. Make sure that the **USB** value is selected from the **Interface** drop-down list.
5. Specify a name for your connection (any name for easier identification) in the **Name** field.

General settings

Provider:	<div>Manually</div>
Connection Type:	<div>LTE</div>
Interface:	<div>USB</div>
Name:*	<div></div>
Enable:	<input checked="" type="checkbox"/>
Direction:	<div>WAN</div>

- If your operator requires to specify the access point name, in the **USB modem** section, fill in the **APN** field. If the operator has provided a username (login) and password, select the **Set username and password** checkbox and fill in the corresponding fields.

Hostname:

- Click the **Apply** button.
- On the **Net / WAN** page, select the choice of the **Default gateway** radio button corresponding to the new LTE WAN connection.

3G WAN Connection

If the PIN code check is enabled for the SIM card inserted into your USB modem, then prior to creating a 3G WAN connection, proceed to the **3G/LTE modem / PIN** menu and enter the PIN code on the page displayed⁵.

If the PIN code check for the SIM card inserted into your USB modem is disabled, an active 3G WAN connection will be automatically created on the **Net / WAN** page when connecting a USB modem to the router⁶. If the connection has not been created automatically, create a new connection manually.

1. Go to the **Net / WAN** page and click the **Add** button.
2. In the **General settings** section, from the **Provider** drop-down list, select your country and operator to automatically specify all settings required to connect to the Internet. To specify all settings independently, leave the **Manually** value.
3. From the **Connection Type** drop-down list, select the **3G** value.
4. Make sure that the **USB** value is selected from the **Interface** drop-down list.
5. Specify a name for your connection (any name for easier identification) in the **Name** field.

The screenshot shows the 'General settings' section of a web interface. It contains the following fields and options:

- Provider:** A dropdown menu with 'Manually' selected.
- Connection Type:** A dropdown menu with '3G' selected.
- Interface:** A dropdown menu with 'USB' selected.
- Name:*** An empty text input field.
- Enable:** A checkbox that is checked.
- Direction:** A dropdown menu with 'WAN' selected.

⁵ For GSM USB modems only. For CDMA USB modems, it is required to disable the PIN code check on the identification card prior to connecting the USB modem to the router.

⁶ For GSM USB modems only.

- If you need to specify other settings, in the **PPP** section, enter authorization data provided by your operator (the username (login) in the **Username** field and the password in the **Password** and **Password confirmation** fields), or select the **Without authorization** checkbox if authorization is not required. If you need to specify the access point name, fill in the **APN** field. In the **Dial number** field, enter the number dialed to connect to the authorization server of the operator.

The screenshot shows the PPP configuration section of a web interface. It includes fields for Username, Password, Password confirmation, APN, and Dial number, along with a checkbox for 'Without authorization' and a dropdown for 'Authentication algorithm'.

7. If your ISP uses MAC address binding, in the **Ethernet** section, in the **MAC** field, enter the MAC address registered by your ISP upon concluding the agreement. To set the MAC address of the network interface card (of the computer that is being used to configure the router at the moment) as the MAC address of the WAN interface, click the **Clone MAC address of your computer** icon (). To set the address of a device connected to the router's LAN at the moment, select the relevant value from the drop-down list (the field will be filled in automatically). To set the router's MAC address as the MAC address of the WAN interface, click the **Restore default MAC address** icon ().

19. If needed, fill in other fields on the page in accordance with data provided by the ISP.
20. Click the **Apply** button.

Example of Connection via VLANs

If your ISP provides:

- access to the Internet via the VLAN with the tag (VLAN ID) **2**, the **PPPoE** connection type, the login **user**, and the password **user_password**,
- access to IPTV service via the VLAN with the tag (VLAN ID) **10**,
- access to IP telephony via the VLAN with the tag (VLAN ID) **20**,

and your set-top box is connected to the LAN port 3, your VoIP phone is connected to the LAN port 4 of the router, then follow the next steps to configure the router.

1. Go to the **Net / WAN** page, select the default connection and click the **Delete** button.
2. Go to the **Advanced / VLAN** page.
3. Select the **lan** group.
4. Deselect the **port3** checkbox.
5. Deselect the **port4** checkbox.
6. Click the **Apply** button.
7. Select the **wan** group and click the **Delete** button.
8. Click the **Add** button.
9. In the **Name** field, enter a name for the group (**INTERNET**).
10. From the **Type** drop-down list, select the **Tagged NAT** value.
11. From the **Tagged port** drop-down list, select the value **internet** (corresponds to the **INTERNET** port of the router).
12. In the **VLAN ID** field, enter **2**.
13. Click the **Apply** button.

You have created the group of ports for connection to the Internet.

- 14. Click the **Add** button.
- 15. In the **Name** field, enter a name for the new group (**IPTV**).
- 16. From the **Type** drop-down list, select the **Bridge** value.
- 17. From the **Tagged port** drop-down list, select the **internet** value.
- 18. In the **Untagged ports** section, select the **port3** checkbox.
- 19. In the **VLAN ID** field, enter **10**.
- 20. Click the **Apply** button.

You have created the group of ports for IPTV service.

- 21. Click the **Add** button.
- 22. In the **Name** field, enter a name for the new group (**VOIP**).
- 23. From the **Type** drop-down list, select the **Bridge** value.
- 24. From the **Tagged port** drop-down list, select the **internet** value.
- 25. In the **Untagged ports** section, select the **port4** checkbox.
- 26. In the **VLAN ID** field, enter **20**.
- 27. Click the **Apply** button.

You have created the group of ports for access to IP telephony.

Advanced / VLAN					
Name	Type	Untagged ports	Tagged ports	VLAN ID	Enable
lan	LAN	port1,wifi_2G-1,port2,wifi_2G-2,wifi_5G-1			Yes
INTERNET	Tagged NAT		internet	2	Yes
IPTV	Bridge	port3	internet	10	Yes
VOIP	Bridge	port4	internet	20	Yes

- 28. Log into the web-based interface and go to the **Net / WAN** page.
- 29. Click the **Add** button.
- 30. On the opened page, select the **PPPoE** value from the **Connection Type** drop-down list.
- 31. From the **Interface** drop-down list, select the **Internet.2** value.
- 32. In the **Username** field, enter **user**.
- 33. Deselect the **Without authorization** checkbox.
- 34. In the **Password** and **Password confirmation** fields, enter **user_password**.
- 35. Click the **Apply** button.

Configuring Local Area Network

1. Go to the **Net / LAN** page. If needed, change the IP address of the router's LAN interface and the mask of the local subnet in the **IP Address** and **Netmask** fields. If you need to change the IPv6 address of the router's LAN interface, deselect the **DHCP PD** checkbox in the **IPv6 address assignment** section and specify the relevant value in the **IPv6 address** field.

IP Address:*

192.168.0.1

Netmask:*

255.255.255.0

IPv6 address:

fd01::1/64

2. **DHCP server.** By default, the built-in DHCP server of the router assigns IPv4 addresses to the devices of the LAN. If you want to manually assign IPv4 addresses, disable the DHCP server (select the **Disable** value from the **Mode** drop-down list).

DHCP server

Mode:

Enable

DNS Relay:

☒

Start IP:*

192.168.0.2

End IP:*

192.168.0.100

Lease time (min):*

1440

3. **IPv6 address assignment.** By default, the devices of the LAN automatically assign IPv6 addresses to themselves (the **Stateless** value is selected from the **Mode** drop-down list in the **IPv6 address assignment** section). If the devices of the LAN do not support IPv6 address autoconfiguration, enable the built-in DHCPv6 server of the router (select the **Stateful** value). If you want to manually assign IPv6 addresses to devices of the LAN, select the **Disable** value.

IPv6 address assignment

DHCP PD:

☒

Mode:

Stateless

Leased Time (min):*

5

4. After specifying the DHCP server settings, click the **Apply** button.

Configuring Guest Wireless Network

1. Go to the **Wi-Fi / Basic settings** page of the band for which you configure the guest network.
2. Select **2** from the **MBSSID** drop-down list.

Wi-Fi / Basic settings / 2.4 GHz

Enable Wireless:

☒

Broadcast wireless network:

☒

 This function allows you to enable or disable broadcasting wireless network without disconnecting the radio router. Can be used in conjunction with a "Client Wi-Fi"

MBSSID:

2

BSSID:

9C:D6:43:3D:01:08

3. Click the **Apply** button.
4. From the **BSSID** drop-down list, select the created part of the network (the second value in the list).
5. Select the **Enable guest network** checkbox.
6. If needed, specify a new name for the guest network in the **Network name (SSID)** field.
7. Click the **Apply** button.
8. Go to the **Wi-Fi / Security settings** page of the band for which you configure the guest network.
9. From the **BSSID** drop-down list, select the guest network (the second value in the list).
10. Select the **WPA2-PSK** value from the **Network Authentication** drop-down list.

Wi-Fi / Security settings / 2.4 GHz

BSSID:

Network Authentication:

Encryption Key PSK:*

WPA Encryption settings

WPA Encryption:

WPA renewal:*

11. Enter a key (a password that will be used to access your guest network) in the **Encryption Key PSK** field. Use digits and Latin characters.
12. Select the **AES** value from the **WPA Encryption** drop-down list.
13. Click the **Apply** button.

If needed, you can also configure a guest network for the other band of the wireless network.

Saving Settings to Non-volatile Memory

In order to avoid losing the new settings upon hardware reboot (accidental or intentional power-off of the device), it is recommended to save the settings to the non-volatile memory of the router.

Place the mouse pointer over the **System** caption in the top part of the page

and click the icon (**Save**) in the menu displayed. Then again place the

mouse pointer over the **System** caption and click the icon (**Reboot device**).

Wait until the router is rebooted. Now you can use it to access the Internet or access the web-based interface of the router to configure additional parameters. For detailed description of every page of the web-based interface, see the “*User Manual*” document (see www.dlink.ru).

SAFETY RULES AND CONDITIONS

Please carefully read this section before installation and connection of the device. Make sure that the power adapter and cables are not damaged. The device should be used only as intended in accordance with the documents.

The device is intended for use in dry, clean, dust-free, and well ventilated areas with normal humidity away from strong heat sources. Do not use the device outdoors or in the areas with high humidity. Do not place foreign objects on the device. Do not obstruct the ventilation openings of the device. The environmental temperature near the device and the temperature inside the device's cover should be within the range from 0 °C to +40 °C.

Only use the power adapter supplied with the device. Do not plug in the adapter, if its case or cable are damaged. Plug the adapter only into working electrical outlets with parameters indicated on the adapter.

Do not open the cover of the device! Unplug the device before dusting and cleaning. Use a damp cloth to clean the device. Do not use liquid/aerosol cleaners or magnetic/static cleaning devices. Prevent moisture getting into the device or the power adapter.

The service life of the device is 2 years.

TECHNICAL SUPPORT

You can find software updates and user documentation on our website.

D-Link provides its customers with free support within the product's warranty period.

Customers can contact the technical support group by phone or by e-mail/Internet.
