# INTRODUCTION

The DES-3800 series is a member of the D-Link xStack switch family. xStack is a complete family of stackable devices that ranges from edge 10/100Mbps switches to core Gigabit switches. xStack provides unsurpassed performance, fault tolerance, scalable flexibility, robust security, standard-based interoperability and an impressive support for 10Gigabit technology to future-proof departmental and enterprise network deployments with an easy migration path.

The Switch can be managed through the Switch's serial port, Telnet, or the Web-based management agent. The Command Line Interface (CLI) can be used to configure and manage the Switch via the serial port or Telnet interfaces.

This manual provides a reference for all of the commands contained in the CLI. Configuration and management of the Switch via the Web-based management agent is discussed in the Manual.

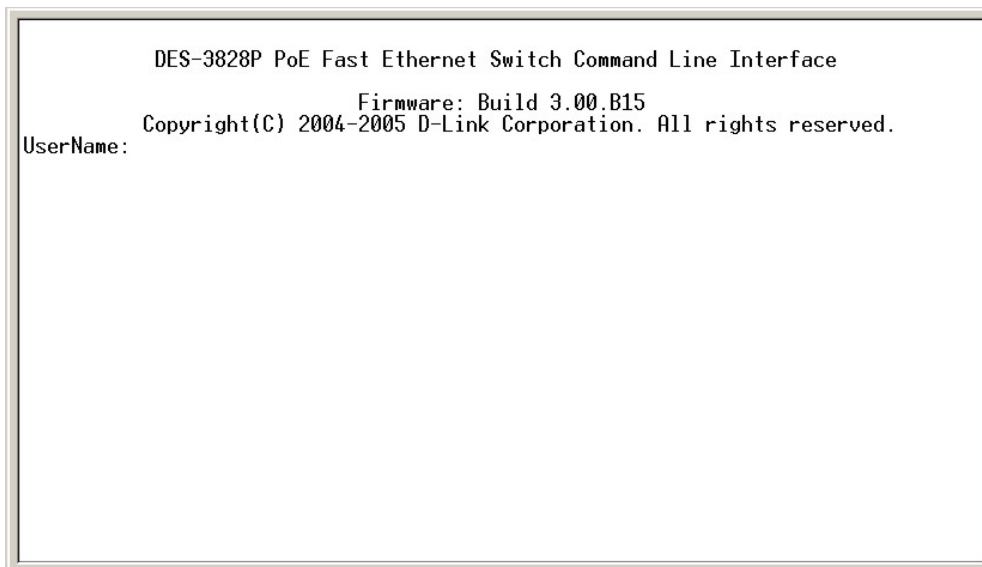

## Accessing the Switch via the Serial Port

The Switch's serial port's default settings are as follows:

- **9600 baud**
- **no parity**
- **8 data bits**
- **1 stop bit**

A computer running a terminal emulation program capable of emulating a VT-100 terminal and a serial port configured as above is then connected to the Switch's serial port via an RS-232 DB-9 cable.

With the serial port properly connected to a management computer, the following screen should be visible. If this screen does not appear, try pressing Ctrl+r to refresh the console screen.

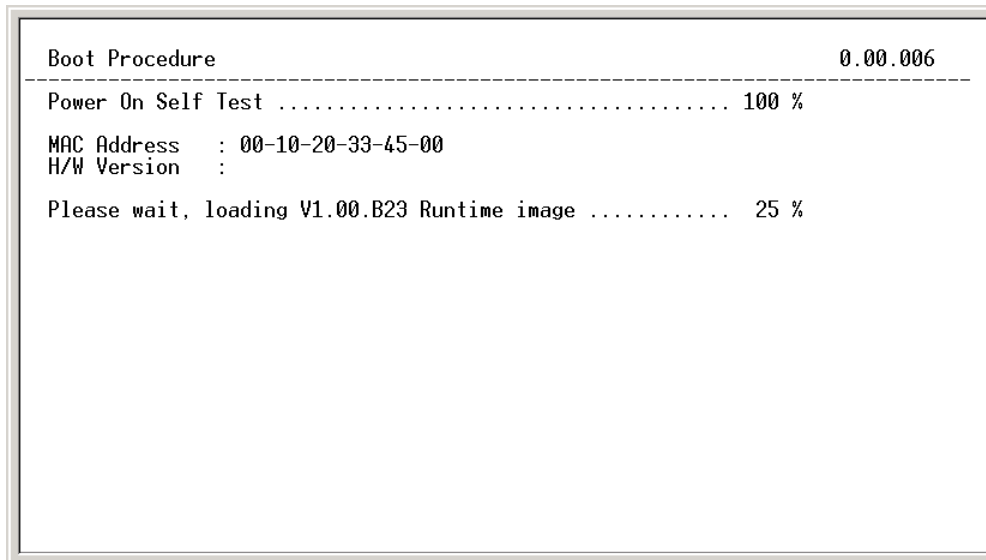

**Figure 1-1. Initial CLI screen**

There is no initial username or password. Just press the **Enter** key twice to display the CLI input cursor – **DES-3800:admin#**. This is the command line where all commands are input.

## Setting the Switch's IP Address

Each Switch must be assigned its own IP Address, which is used for communication with an SNMP network manager or other TCP/IP application (for example BOOTP, TFTP). The Switch's default IP address is 10.90.90.90. You can change the default Switch IP address to meet the specification of your networking address scheme.

The Switch is also assigned a unique MAC address by the factory. This MAC address cannot be changed, and can be found on the initial boot console screen – shown below.

**Figure 1-2. Boot Screen**

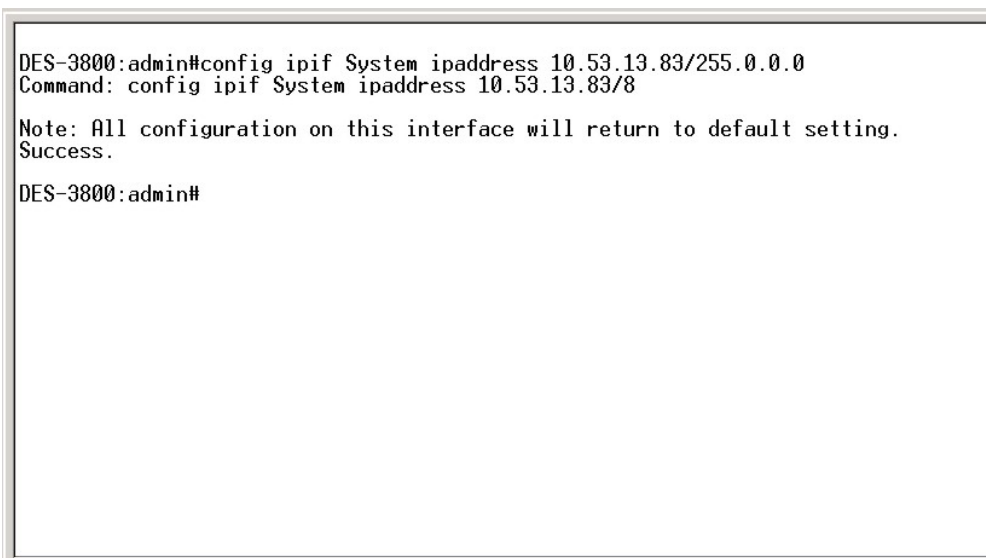

The Switch's MAC address can also be found in the Web management program on the Switch Information (Basic Settings) window on the Configuration menu.

The IP address for the Switch must be set before it can be managed with the Web-based manager. The Switch IP address can be automatically set using BOOTP or DHCP protocols, in which case the actual address assigned to the Switch must be known.

The IP address may be set using the Command Line Interface (CLI) over the console serial port as follows:

1. Starting at the command line prompt, enter the commands **config ipif System ipaddress xxx.xxx.xxx.xxx/yyy.yyy.yyy.yyy**. Where the **x**'s represent the IP address to be assigned to the IP interface named **System** and the **y**'s represent the corresponding subnet mask.
2. Alternatively, you can enter **config ipif System ipaddress xxx.xxx.xxx.xxx/z**. Where the **x**'s represent the IP address to be assigned to the IP interface named **System** and the **z** represents the corresponding number of subnets in CIDR notation.

The IP interface named **System** on the Switch can be assigned an IP address and subnet mask which can then be used to connect a management station to the Switch's Telnet or Web-based management agent.

**Figure 1-3. Assigning an IP Address**

In the above example, the Switch was assigned an IP address of 10.53.13.83 with a subnet mask of 255.0.0.0. The system message **Success** indicates that the command was executed successfully. The Switch can now be configured and managed via Telnet, SNMP MIB browser and the CLI or via the Web-based management agent using the above IP address to connect to the Switch.

## USING THE CONSOLE CLI

The Switch supports a console management interface that allows the user to connect to the Switch's management agent via a serial port and a terminal or a computer running a terminal emulation program. The console can also be used over the network using the TCP/IP Telnet protocol. The console program can be used to configure the Switch to use an SNMP-based network management software over the network.

This chapter describes how to use the console interface to access the Switch, change its settings, and monitor its operation.

**Note:** Switch configuration settings are saved to non-volatile RAM using the `save` command. The current configuration will then be retained in the Switch's NV-RAM, and reloaded when the Switch is rebooted. If the Switch is rebooted without using the `save` command, the last configuration saved to NV-RAM will be loaded.

### Connecting to the Switch

The console interface is used by connecting the Switch to a VT100-compatible terminal or a computer running an ordinary terminal emulator program (e.g., the **HyperTerminal** program included with the Windows operating system) using an RS-232C serial cable. Your terminal parameters will need to be set to:

- **VT-100 compatible**
- **9600 baud**
- **8 data bits**
- **No parity**
- **One stop bit**
- **No flow control**

You can also access the same functions over a Telnet interface. Once you have set an IP address for your Switch, you can use a Telnet program (in VT-100 compatible terminal mode) to access and control the Switch. All of the screens are identical, whether accessed from the console port or from a Telnet interface.

After the Switch reboots and you have logged in, the console looks like this:

```
DES-3828P PoE Fast Ethernet Switch Command Line Interface
                               Firmware: Build 3.00.B15
                               Copyright(C) 2004-2005 D-Link Corporation. All rights reserved.
UserName:
```

**Figure 2- 1. Initial Console Screen after logging in**

Commands are entered at the command prompt, **DES-3800:admin#**.

There are a number of helpful features included in the CLI. Entering the **?** command will display a list of all of the top-level commands.

```
?
clear
clear arptable
clear counters
clear fdb
clear log
clear port_security_entry port
config 802.1p default_priority
config 802.1p user_priority
config 802.1x auth_mode
config 802.1x auth_parameter ports
config 802.1x capability ports
config 802.1x guest_vlan
config 802.1x guest_vlan ports
config 802.1x init
config 802.1x reauth
config access_profile profile_id
config account
config address_binding ip_mac ipaddress
config address_binding ip_mac ports
config admin local enable
CTRL+C ESC Q Quit SPACE N Next Page ENTER Next Entry A All
```

**Figure 2- 2. The ? Command**

When you enter a command without its required parameters, the CLI will prompt you with a **Next possible completions:** message.

```
DES-3800:admin#config account
Command: config account

Next possible completions:
<username>

DES-3800:admin#
```

**Figure 2- 3. Example Command Parameter Help**

In this case, the command **config account** was entered with the parameter **<username>**. The CLI will then prompt you to enter the **<username>** with the message, **Next possible completions:**. Every command in the CLI has this feature, and complex commands have several layers of parameter prompting.

In addition, after typing any given command plus one space, you can see all of the next possible sub-commands, in sequential order, by repeatedly pressing the **Tab** key.

To re-enter the previous command at the command prompt, press the up arrow cursor key. The previous command will appear at the command prompt.

```
DES-3800:admin#config account
Command: config account

Next possible completions:
<username>

DES-3800:admin#config account
Command: config account

Next possible completions:
<username>

DES-3800:admin#
```

**Figure 2- 4. Using the Up Arrow to Re-enter a Command**

In the above example, the command **config account** was entered without the required parameter **<username>**, the CLI returned the **Next possible completions: <username>** prompt. The up arrow cursor control key was pressed to re-enter the previous command (**config account**) at the command prompt. Now the appropriate username can be entered and the **config account** command re-executed.

All commands in the CLI function in this way. In addition, the syntax of the help prompts are the same as presented in this manual – angle brackets **< >** indicate a numerical value or character string, braces **{ }** indicate optional parameters or a choice of parameters, and brackets **[ ]** indicate required parameters.

If a command is entered that is unrecognized by the CLI, the top-level commands will be displayed under the **Available commands:** prompt.

```
DES-3800:4#the
Available commands:
..
create          delete          clear          config
download        enable          dir            disable
ping            reboot         login         logout
save            show           reconfig      reset
               traceroute     upload

DES-3800:4#
```

**Figure 2- 5. Available Commands**

The top-level commands consist of commands such as **show** or **config**. Most of these commands require one or more parameters to narrow the top-level command. This is equivalent to **show** what? or **config** what? Where the what? is the next parameter.

For example, if you enter the **show** command with no additional parameters, the CLI will then display all of the possible next parameters.

```
DES-3800:admin#show
Command: show

Next possible completions:
802.1p          802.1x          access_profile  account
accounting      address_binding arprentry       authen
authen_enable   authen_login    authen_policy   autoconfig
bandwidth_control command_history config           cpu
cpu_interface_filtering double_vlan      device_status   dhcp_relay
dnsmr           firmware        dvmrp           error
fdb             igmp            greeting_message gvrp
igmp            igmp_snooping  ipfdb           ipif
ipmc            iproute         jumbo_frame     lacp_port
limited          link_aggregation log              mac_based_access_control_local
mac_based_access_control md5             mirror           multicast_fdb
mac_notification pim             port_security   route
ospf            radius          rip             scheduling
ports           safeguard_engine serial_port      session
router_ports    scheduling_mechanism snmp            ssh
sim            ssl             stp             syslog
system_severity time            traffic          trusted_host     utilization
traffic_segmentation vlan            vrrp            wac              wred

DES-3800:admin#
```

**Figure 2- 6. Next possible completions: Show Command**

In the above example, all of the possible next parameters for the **show** command are displayed.

## COMMAND SYNTAX

The following symbols are used to describe how command entries are made and values and arguments are specified in this manual. The online help contained in the CLI and available through the console interface uses the same syntax.

**Note:** All commands are case-sensitive. Be sure to disable Caps Lock or any other unwanted function that changes text case.

<angle brackets>	
Purpose	Encloses a variable or value that must be specified.
Syntax	<b>create ipif &lt;ipif_name 12&gt; &lt;network_address&gt; (&lt;ip_addr/netmask&gt;) &lt;vlan_name 32&gt; {secondary   state [enable   disable]}   proxy_arp [enable   disable]}</b>
Description	In the above syntax example, you must supply an IP interface name in the <ipif_name> space, a VLAN name in the <vlan_name 32> space, and the network address, including the netmask, in the <network_address> (<ip_addr/netmask>) space. Do not type the angle brackets.
Example Command	<b>create ipif Engineering 10.24.22.5/255.0.0.0 Design</b>

[square brackets]	
Purpose	Encloses a required value or set of required arguments. One value or argument can be specified.
Syntax	<b>create account [admin   operator   user] &lt;username 15&gt;</b>
Description	In the above syntax example, you must specify either an <b>admin</b> , <b>operator</b> or a <b>user</b> level account to be created. Do not type the square brackets.
Example Command	<b>create account admin Darren</b>

vertical bar	
Purpose	Separates two or more mutually exclusive items in a list, one of which must be entered.
Syntax	<b>create account [admin   operator   user] &lt;username 15&gt;</b>
Description	In the above syntax example, you must specify either <b>admin</b> , <b>operator</b> or <b>user</b> . Do not type the backslash.
Example Command	<b>create account admin Darren</b>

**{braces}**

Purpose	Encloses an optional value or set of optional arguments.
Syntax	<b>reset {[config   system]}</b>
Description	In the above syntax example, you have the option to specify <b>config</b> or <b>detail</b> . It is not necessary to specify either optional value, however the effect of the system reset is dependent on which, if any, value is specified. Therefore, with this example there are three possible outcomes of performing a system reset. See the following chapter, Basic Commands for more details about the reset command.
Example command	<b>reset config</b>

**Line Editing Key Usage**

Delete	Deletes the character under the cursor and then shifts the remaining characters in the line to the left.
Backspace	Deletes the character to the left of the cursor and then shifts the remaining characters in the line to the left.
Insert or Ctrl+R	Toggle on and off. When toggled on, inserts text and shifts previous text to the right.
Left Arrow	Moves the cursor to the left.
Right Arrow	Moves the cursor to the right.
Up Arrow	Repeats the previously entered command. Each time the up arrow is pressed, the command previous to that displayed appears. This way it is possible to review the command history for the current session. Use the down arrow to progress sequentially forward through the command history list.
Down Arrow	The down arrow will display the next command in the command history entered in the current session. This displays each command sequentially as it was entered. Use the up arrow to review previous commands.
Tab	Shifts the cursor to the next field to the left.

**Multiple Page Display Control Keys**

Space	Displays the next page.
CTRL+c	Stops the display of remaining pages when multiple pages are to be displayed.
ESC	Stops the display of remaining pages when multiple pages are to be displayed.
n	Displays the next page.
p	Displays the previous page.
q	Stops the display of remaining pages when multiple pages are to be displayed.
r	Refreshes the pages currently displayed.
a	Displays the remaining pages without pausing between pages.
Enter	Displays the next line or table entry.

## BASIC SWITCH COMMANDS

The basic switch commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create account	[admin   operator   user] <username 15>
config account	<username>
show account	
delete account	<username>
show session	
show switch	
show serial_port	
config serial_port	{baud_rate [9600   19200   38400   115200] auto_logout [never   2_minutes   5_minutes   10_minutes   15_minutes]}
enable clipaging	
disable clipaging	
enable telnet	<tcp_port_number 1-65535>
disable telnet	
enable web	<tcp_port_number 1-65535>
disable web	
save	
reboot	
reset	{[config   system]}
login	
logout	
show device status	
config greeting_message	{default}
show greeting_message	
telnet	<ipaddr> {tcp_port <value 0-65535>}

Each command is listed, in detail, in the following sections.

### create account

<b>Purpose</b>	Used to create user accounts.
<b>Syntax</b>	<b>create account [admin   operator   user] &lt;username 15&gt;</b>
<b>Description</b>	The <b>create account</b> command is used to create user accounts that consist of a username of 1 to 15 characters and a password of 0 to 15 characters. Up to 8 user accounts can be created.
<b>Parameters</b>	The administrator can choose one of the following three levels of privileges available on the Switch. <i>admin</i> – Select this parameter to create an administrator-level account for the Switch. <i>admin</i> accounts have access and configuration rights to all components of the software of the Switch.

**create account**

Switch administrators must first create an admin-level account before an operator or user account can be created. Only admin level users can create other user accounts.

*operator* – Select this parameter to create a operator-level user account for the Switch. Operator-level users will have rights to switch configurations, network monitoring commands, community strings and trap stations, and system utilities. All security commands, user account commands and the factory reset command will be denied from this privilege level.

*user* – Select this parameter to create a user-level account on the Switch. User-level accounts have read-only rights to configuration commands, network monitoring commands and commands for community stations and trap strings.

- *<username 15>* - Enter a username of no more than 15 alphanumeric characters to identify the account created here.

**Restrictions**

User Account Command Level – Administrator only  
 Usernames can be between 1 and 15 characters.  
 Passwords can be between 0 and 15 characters.

Example usage:

To create an administrator-level user account with the username “dlink”.

```
DES-3800:admin#create account admin dlink
Command: create account admin dlink

Enter a case-sensitive new password:****
Enter the new password again for confirmation:****

Success.

DES-3800:admin#
```

The following table summarizes the Admin, Operator and User privileges:

Management	Admin	Operator	User
Configuration	Yes	Yes	Read-only
Network Monitoring	Yes	Yes	Read-only
Community Strings and Trap Stations	Yes	Yes	Read-only
Update Firmware and Configuration Files	Yes	No	No
System Utilities	Yes	Yes	No
Factory Reset	Yes	No	No
User Account Management			
Add/Update/Delete User Accounts	Yes	No	No
View User Accounts	Yes	No	No

**NOTE:** One admin-level account must be created before other user accounts can be set. When a user logs in to the Switch, the default command prompt will display the level of privilege assigned. (DES-3800:admin#, DES-3800:oper#, DES-3800:user#). For more information regarding user accounts, see the ***DES-3800 Series Layer 3 Stackable Fast Ethernet Managed Switch User Manual***.

## config account

<b>Purpose</b>	Used to configure user accounts.
<b>Syntax</b>	<b>config account &lt;username&gt;</b>
<b>Description</b>	The <b>config account</b> command configures a user account that has been created using the <b>create account</b> command.
<b>Parameters</b>	<username 15> - Enter a username of no more than 15 alphanumeric characters to identify the account modified here.
<b>Restrictions</b>	User Account Command Level – Administrator only Usernames can be between 1 and 15 characters. Passwords can be between 0 and 15 characters.

Example usage:

To configure the user password of “dlink” account:

```
DES-3800:admin#config account dlink
Command: config account dlink

Enter a old password:****
Enter a case-sensitive new password:****
Enter the new password again for confirmation:****

Success.

DES-3800:admin#
```

## show account

<b>Purpose</b>	Used to display user accounts
<b>Syntax</b>	<b>show account</b>
<b>Description</b>	Displays all user accounts created on the Switch. Up to 8 user accounts can exist at one time.
<b>Parameters</b>	None.
<b>Restrictions</b>	Only Administrator-level users can issue this command.

Example usage:

To display the accounts that have been created:

```
DES-3800:admin#show account
```

```
Command: show account
```

```
Current Accounts:
```

```
Username      Access Level
```

```
-----
```

```
dlink         Admin
```

```
Total Entries: 1
```

```
DES-3800:admin#
```

## delete account

<b>Purpose</b>	Used to delete an existing user account.
<b>Syntax</b>	<b>delete account &lt;username&gt;</b>
<b>Description</b>	The <b>delete account</b> command deletes a user account that has been created using the <b>create account</b> command.
<b>Parameters</b>	<username 15> - Enter a username of no more than 15 alphanumeric characters to identify the account to be deleted here.
<b>Restrictions</b>	User Account Command Level – Administrator only

Example usage:

To delete the user account “System”:

```
DES-3800:admin#delete account System
```

```
Command: delete account System
```

```
Success.
```

```
DES-3800:admin#
```

## show session

<b>Purpose</b>	Used to display a list of currently logged-in users.
<b>Syntax</b>	<b>show session</b>
<b>Description</b>	This command displays a list of all the users that are logged-in at the time the command is issued.
<b>Parameters</b>	None
<b>Restrictions</b>	User Account Command Level – All

Example usage:

To display the way that the users logged in:

```
DES-3800:admin#show session
```

```
Command: show session
```

ID	Login Time	Live Time	From	Level	Name
*8	00000 days 00:00:37	03:36:27	Serial Port	4	Anonymous

CTRL+C ESC q Quit SPACE n Next Page ENTER Next Entry a All

## show switch

<b>Purpose</b>	Used to display general information about the Switch.
<b>Syntax</b>	<b>show switch</b>
<b>Description</b>	This command displays information about the Switch.
<b>Parameters</b>	None.
<b>Restrictions</b>	User Account Command Level – All

Example usage:

To display the Switch's information:

```
DES-3800:admin#show switch
```

```
Command: show switch
```

```

Device Type       : DES-3828P PoE Fast-Ethernet Switch
Combo Port Type  : 1000Base-T + 1000Base-T
MAC Address       : 00-10-20-33-45-00
IP Address        : 10.58.44.77 (Manual)
VLAN Name         : default
Subnet Mask       : 255.0.0.0
Default Gateway   : 0.0.0.0
Boot PROM Version : Build 0.00.010
Firmware Version  : Build 3.00.B15
Hardware Version  : 1A2G
Device S/N        :
Power Status      : Main - Normal, Redundant - Not Present
System Name       :

```

```
DES-3800:admin#
```

## show serial\_port

<b>Purpose</b>	Used to display the current serial port settings.
<b>Syntax</b>	<b>show serial_port</b>
<b>Description</b>	This command displays the current serial port settings.
<b>Parameters</b>	None.
<b>Restrictions</b>	User Account Command Level – All

Example usage:

To display the serial port setting:

```
DES-3800:admin#show serial_port
Command: show serial_port

Baud Rate      : 9600
Data Bits      : 8
Parity Bits     : None
Stop Bits       : 1
Auto-Logout     : 10 mins

DES-3800:admin#
```

## config serial\_port

<b>Purpose</b>	Used to configure the serial port.
<b>Syntax</b>	<b>config serial_port {baud_rate [9600   19200   38400   115200]   auto_logout [never   2_minutes   5_minutes   10_minutes   15_minutes]}</b>
<b>Description</b>	This command is used to configure the serial port's baud rate and auto logout settings.
<b>Parameters</b>	<p><i>baud_rate [9600   19200   38400   115200]</i>– The serial bit rate that will be used to communicate with the management host. There are four options: 9600, 19200, 38400, 115200.</p> <p><i>never</i> – No time limit on the length of time the console can be open with no user input.</p> <p><i>2_minutes</i> – The console will log out the current user if there is no user input for 2 minutes.</p> <p><i>5_minutes</i> – The console will log out the current user if there is no user input for 5 minutes.</p> <p><i>10_minutes</i> – The console will log out the current user if there is no user input for 10 minutes.</p> <p><i>15_minutes</i> – The console will log out the current user if there is no user input for 15 minutes.</p>
<b>Restrictions</b>	User Account Command Level – Administrator only

Example usage:

To configure baud rate:

```
DES-3800:admin#config serial_port baud_rate 115200
Command: config serial_port baud_rate 115200

Success.

DES-3800:admin#
```

## enable clipaging

<b>Purpose</b>	Used to pause the scrolling of the console screen when the show command displays more than one page.
<b>Syntax</b>	<b>enable clipaging</b>
<b>Description</b>	This command is used when issuing a command which causes the console screen to rapidly scroll through several pages. This command will cause the console to pause at the end of each page. The default setting is <i>enable</i> .
<b>Parameters</b>	None.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To enable pausing of the screen display when the show command output reaches the end of the page:

```
DES-3800:admin#enable clipaging
Command: enable clipaging

Success.

DES-3800:admin#
```

## disable clipaging

<b>Purpose</b>	Used to disable the pausing of the console screen scrolling at the end of each page when a command displays more than one screen of information.
<b>Syntax</b>	<b>disable clipaging</b>
<b>Description</b>	This command is used to disable the pausing of the console screen at the end of each page when a command would display more than one screen of information.
<b>Parameters</b>	None.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To disable pausing of the screen display when show command output reaches the end of the page:

```
DES-3800:admin#disable clipaging
Command: disable clipaging

Success.

DES-3800:admin#
```

## enable telnet

<b>Purpose</b>	Used to enable communication with and management of the Switch using the Telnet protocol.
<b>Syntax</b>	<b>enable telnet &lt;tcp_port_number 1-65535&gt;</b>
<b>Description</b>	This command is used to enable the Telnet protocol on the Switch.

## enable telnet

	The user can specify the TCP or UDP port number the Switch will use to listen for Telnet requests.
<b>Parameters</b>	<tcp_port_number 1-65535> – The TCP port number. TCP ports are numbered between 1 and 65535. The “well-known” TCP port for the Telnet protocol is 23.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To enable Telnet and configure port number:

```
DES-3800:admin#enable telnet 23
Command: enable telnet 23

Success.

DES-3800:admin#
```

## disable telnet

<b>Purpose</b>	Used to disable the Telnet protocol on the Switch.
<b>Syntax</b>	<b>disable telnet</b>
<b>Description</b>	This command is used to disable the Telnet protocol on the Switch.
<b>Parameters</b>	None.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To disable the Telnet protocol on the Switch:

```
DES-3800:admin#disable telnet
Command: disable telnet

Success.

DES-3800:admin#
```

## telnet

<b>Purpose</b>	Used to Telnet another device on the network.
<b>Syntax</b>	<b>telnet &lt;ipaddr&gt; {tcp_port &lt;value 0-65535&gt;}</b>
<b>Description</b>	This command is used to connect to another device’s management through Telnet.
<b>Parameters</b>	<ipaddr> - Enter the IP address of the device to connect through, using Telnet.  tcp_port <value 0-65535> - Enter the TCP port number used to connect through. The common TCP port number for telnet is 23.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To connect to a device through telnet with a IP address of 10.53.13.99:

```
DES-3800:admin#telnet 10.53.13.99 tcp_port 23
Command: telnet 10.53.13.99 tcp_port 23
```

## enable web

<b>Purpose</b>	Used to enable the HTTP-based management software on the Switch.
<b>Syntax</b>	<b>enable web &lt;tcp_port_number 1-65535&gt;</b>
<b>Description</b>	This command is used to enable the Web-based management software on the Switch. The user can specify the TCP port number the Switch will use to listen for Telnet requests.
<b>Parameters</b>	<tcp_port_number 1-65535> – The TCP port number. TCP ports are numbered between 1 and 65535. The “well-known” port for the Web-based management software is 80.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To enable HTTP and configure port number:

```
DES-3800:admin#enable web 80
Command: enable web 80

Success.

DES-3800:admin#
```

## disable web

<b>Purpose</b>	Used to disable the HTTP-based management software on the Switch.
<b>Syntax</b>	<b>disable web</b>
<b>Description</b>	This command disables use of the Web-based management software on the Switch.
<b>Parameters</b>	None.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To disable HTTP:

```
DES-3800:admin#disable web
Command: disable web

Success.

DES-3800:admin#
```

## save

<b>Purpose</b>	Used to save changes in the Switch's configuration to non-volatile RAM.
<b>Syntax</b>	<b>save {config &lt;config_id 1-2&gt;}</b>

## save

<b>Description</b>	This command is used to enter the current switch configuration into non-volatile RAM. The saved switch configuration will be loaded into the Switch's memory each time the Switch is restarted.
<b>Parameters</b>	<i>config &lt;config_id 1-2&gt;</i> - Choose this parameter to save the current switch configuration to a file located on the memory of the Switch. The user may enter 1 or 2 to identify this configuration file. If no <i>config_id</i> is specified, changes in the switch configuration will be saved to the current and active switch configuration file.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To save the Switch's current configuration to non-volatile RAM:

```
DES-3800:admin#save
Command: save

Saving all configurations to NV-RAM... Done.

DES-3800:admin#
```

Example usage:

To save the Switch's current configuration to config\_id 1 in the non-volatile RAM:

```
DES-3800:admin#save config 1
Command: save

Saving all configurations to NV-RAM... Done.

DES-3800:admin#
```

## reboot

<b>Purpose</b>	Used to restart the Switch.
<b>Syntax</b>	<b>reboot</b>
<b>Description</b>	This command is used to restart the Switch.
<b>Parameters</b>	None.
<b>Restrictions</b>	User Account Command Level – Administrator only

Example usage:

To restart the Switch:

```
DES-3800:admin#reboot
Command: reboot
Are you sure want to proceed with the system reboot? (y|n)
Please wait, the switch is rebooting...
```

## reset

<b>Purpose</b>	Used to reset the Switch to the factory default settings.
<b>Syntax</b>	<b>reset {[config   system]}</b>

**reset**

<b>Description</b>	This command is used to restore the Switch's configuration to the default settings assigned from the factory.
<b>Parameters</b>	<p><i>config</i> – If the keyword 'config' is specified, all of the factory default settings are restored on the Switch including the IP address, user accounts, and the switch history log. The Switch will not save or reboot.</p> <p><i>system</i> – If the keyword 'system' is specified all of the factory default settings are restored on the Switch. The Switch will save and reboot after the settings are changed to default. Rebooting will clear all entries in the Forwarding Data Base.</p> <p>If no parameter is specified, the Switch's current IP address, user accounts, and the switch history log are not changed. All other parameters are restored to the factory default settings. The Switch will not save or reboot.</p>
<b>Restrictions</b>	User Account Command Level – Administrator only.

Example usage:

To restore all of the Switch's parameters to its default values:

```
DES-3800:admin#reset config
Command: reset config

Are you sure to proceed with system reset?(y/n)

Success.

DES-3800:admin#
```

**login**

<b>Purpose</b>	Used to log in a user to the Switch's console.
<b>Syntax</b>	<b>login</b>
<b>Description</b>	This command is used to initiate the login procedure. The user will be prompted for a Username and Password.
<b>Parameters</b>	None.
<b>Restrictions</b>	User Account Command Level – All

Example usage:

To initiate the login procedure:

```
DES-3800:admin#login
Command: login

UserName:
```

**logout**

<b>Purpose</b>	Used to log out a user from the Switch's console.
<b>Syntax</b>	<b>logout</b>

## logout

<b>Description</b>	This command terminates the current user's session on the Switch's console.
<b>Parameters</b>	None.
<b>Restrictions</b>	User Account Command Level – All

Example usage:

To terminate the current user's console session:

```
DES-3800:admin#logout
```

## show device\_status

<b>Purpose</b>	Used to display the current status of the hardware of the Switch.
<b>Syntax</b>	<b>show device_status</b>
<b>Description</b>	This command displays the current status of the Switch's physical elements.
<b>Parameters</b>	None.
<b>Restrictions</b>	User Account Command Level – All

Example usage:

To show the current hardware status of the Switch:

```
DES-3800:admin#show device_status
Command: show device_status

Internal Power  External power  Side Fan  Back Fan
-----
Active         None          Fail      OK

DES-3800:admin#
```

## config command\_prompt

<b>Purpose</b>	Used to configure the command prompt for the Command Line Interface.
<b>Syntax</b>	<b>config command_prompt [&lt;string 16&gt;   username   default]</b>
<b>Description</b>	This command is used to configure the command prompt for the CLI interface of the Switch. The current command prompt consists of "product name + : + user level + product name" (ex. DES-3800:admin#). The user may replace all parts of the command prompt, except the # by entering a string of 16 alphanumerical characters with no spaces, or the user may enter the current login username configured on the Switch.
<b>Parameters</b>	<p><b>&lt;string 16&gt;</b> - Enter an alphanumeric string of no more than 16 characters to define the command prompt for the CLI interface.</p> <p><b>username</b> – Entering this parameter will replace the current CLI command prompt with the login username configured on the Switch.</p> <p><b>default</b> – Entering this parameter will return the command prompt to its original factory default setting.</p>
<b>Restrictions</b>	The <b>reset</b> command will not alter the configured command prompt, yet the <b>reset system</b> command will return the command prompt to its original factory default setting.

**config command\_prompt**

User Account Command Level – Administrator and Operator

Example usage:

To configure the command prompt:

```
DES-3800:admin#config command prompt Trinity
Command: config command prompt Trinity

Success.

Trinity#
```

**config greeting\_message**

Purpose	Used to configure the greeting message or banner for the opening screen of the Command Line Interface.
Syntax	<b>config greeting_message {default}</b>
Description	This command is used to configure the greeting message or login banner for the opening screen of the CLI.
Parameters	<i>default</i> – Adding this parameter will return the greeting command to its original factory default configuration.
Restrictions	<p>The <b>reset</b> command will not alter the configured greeting message, yet the <b>reset system</b> command will return the greeting message to its original factory default setting.</p> <p>The maximum character capacity for the greeting banner is 6 lines and 80 characters per line. Entering Ctrl+W will save the current configured banner to the DRAM only. To enter it into the FLASH memory, the user must enter the save command.</p>
User Account Command Level – Administrator and Operator	

Example usage:

To configure the greeting message:

DES-3800:admin#config greeting\_message

Command: config greeting\_message

**Greeting Messages Editor**

```

## show greeting\_message

Purpose	Used to view the currently configured greeting message configured on the Switch.
Syntax	<b>show greeting_message</b>
Description	This command is used to view the currently configured greeting message on the Switch.
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To view the currently configured greeting message:

```
DES-3800:admin#show greeting_message
```

```
Command: show greeting_message
```

```

## SWITCH PORT COMMANDS

The switch port commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config ports	[<portlist   all>] {speed [auto   10_half   10_full   100_half   100_full   1000_full]   flow_control [enable   disable]   learning [enable   disable]   state [enable   disable]}   description [<desc 32>   clear]}
show ports	{[description   err_disabled   <portlist>] {[description]   err_disabled]}

Each command is listed, in detail, in the following sections.

### config ports

<b>Purpose</b>	Used to configure the Switch's Ethernet port settings.
<b>Syntax</b>	[<portlist   all>] {speed [auto   10_half   10_full   100_half   100_full   1000_full]   flow_control [enable   disable]   learning [enable   disable]   state [enable   disable]}   description [<desc 32>   clear]}
<b>Description</b>	This command allows for the configuration of the Switch's Ethernet ports. Only the ports listed in the <portlist> will be affected.
<b>Parameters</b>	<p><i>all</i> – Configure all ports on the Switch.</p> <p><i>&lt;portlist&gt;</i> – Specifies a port or range of ports to be configured.</p> <p><i>speed</i> – Allows the user to adjust the speed for a port or range of ports. The user has a choice of the following:</p> <ul style="list-style-type: none"> <li><i>auto</i> – Enables auto-negotiation for the specified range of ports.</li> <li><i>[10   100   1000]</i> – Configures the speed in Mbps for the specified range of ports. Gigabit ports are statically set to 1000 and cannot be set to slower speeds.</li> <li><i>[half   full]</i> – Configures the specified range of ports as either full-duplex or half-duplex.</li> </ul> <p><i>flow_control [enable   disable]</i> – Enable or disable flow control for the specified ports.</p> <p><i>learning [enable   disable]</i> – Enables or disables the MAC address learning on the specified range of ports.</p> <p><i>state [enable   disable]</i> – Enables or disables the specified range of ports.</p> <p><i>description &lt;desc 32&gt;</i> – Enter an alphanumeric string of no more than 32 characters to describe a selected port interface.</p> <p><i>clear</i> – Enter this command to clear the port description of the selected port(s).</p>
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To configure the speed of port 3 to be 10 Mbps, full duplex, with learning and state enabled:

```
DES-3800:admin#config ports 1-3 speed 10_full learning enable state enable
Command: config ports 1-3 speed 10_full learning enable state enable

Success.

DES-3800:admin#
```

**show ports**

<b>Purpose</b>	Used to display the current configuration of a range of ports.
<b>Syntax</b>	<b>show ports</b> {[description   err_disabled   <portlist>} {[description]   err_disabled]}
<b>Description</b>	This command is used to display the current configuration of a range of ports.
<b>Parameters</b>	<p>&lt;portlist&gt; – Specifies a port or range of ports to be displayed.</p> <p>{description} – Adding this parameter to the <b>show ports</b> command indicates that a previously entered port description will be included in the display.</p> <p>err_disabled – Choosing this parameter will display ports that have been disconnected due to an error on the port, such as a Loopback Detection.</p>
<b>Restrictions</b>	User Account Command Level – All

Example usage:

To display the configuration of all ports on a standalone switch:

```
DES-3800:admin#show ports
Command: show ports
```

Port	Port State	Settings Speed/Duplex/FlowCtrl	Connection Speed/Duplex/FlowCtrl	Address Learning

## PORT SECURITY COMMANDS

The Switch's port security commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config port_security ports	[<portlist>   all] {admin_state [enable  disable]   max_learning_addr <max_lock_no 0-16>   lock_address_mode [Permanent   DeleteOnTimeout   DeleteOnReset]}
delete port_security entry vlan_name	<vlan_name 32> mac_address <macaddr> port <port>
clear port_security_entry	port <portlist>
show port_security	{ports <portlist>}
enable port_security trap_log	
disable port_security trap_log	

Each command is listed, in detail, in the following sections.

config port_security ports	
<b>Purpose</b>	Used to configure port security settings.
<b>Syntax</b>	<b>config port_security ports</b> [<portlist>   all] {admin_state [enable  disable]   max_learning_addr <max_lock_no 0-16>   lock_address_mode [Permanent   DeleteOnTimeout   DeleteOnReset]}
<b>Description</b>	This command allows for the configuration of the port security feature. Only the ports listed in the <portlist> are affected.
<b>Parameters</b>	<p><i>portlist</i> – Specifies a port or range of ports to be configured.</p> <p><i>all</i> – Configure port security for all ports on the Switch.</p> <p><i>admin_state</i> [enable   disable] – Enable or disable port security for the listed ports.</p> <p><i>max_learning_addr</i> &lt;max_lock_no 0-16&gt; - Use this to limit the number of MAC addresses dynamically listed in the FDB for the ports.</p> <p><i>lock_address_mode</i> [Permanent   DeleteOnTimeout   DeleteOnReset] – Indicates the method of locking addresses. The user has three choices:</p> <ul style="list-style-type: none"> <li>▪ <i>Permanent</i> – The locked addresses will not age out after the aging timer expires.</li> <li>▪ <i>DeleteOnTimeout</i> – The locked addresses will age out after the aging timer expires.</li> <li>▪ <i>DeleteOnReset</i> – The locked addresses will not age out until the Switch has been reset.</li> </ul>
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To configure the port security:

```
DES-3800:admin#config port_security ports 1-5 admin_state
enable max_learning_addr 5 lock_address_mode DeleteOnReset
Command: config port_security ports 1-5 admin_state enable
max_learning_addr 5 lock_address_mode DeleteOnReset

Success.

DES-3800:admin#
```

## delete port\_security\_entry

<b>Purpose</b>	Used to delete a port security entry by MAC address, port number and VLAN ID.
<b>Syntax</b>	<b>delete port_security_entry vlan name &lt;vlan_name 32&gt; mac_address &lt;macaddr&gt; port &lt;port&gt;</b>
<b>Description</b>	This command is used to delete a single, previously learned port security entry by port, VLAN name, and MAC address.
<b>Parameters</b>	<i>vlan name &lt;vlan_name 32&gt;</i> - Enter the corresponding vlan name of the port which the user wishes to delete. <i>mac_address &lt;macaddr&gt;</i> - Enter the corresponding MAC address, previously learned by the port, which the user wishes to delete. <i>port &lt;port&gt;</i> - Enter the port number which has learned the previously entered MAC address.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To delete a port security entry:

```
DES-3800:admin#delete port_security_entry vlan_name default
mac_address 00-01-30-10-2C-C7 port 6
Command: delete port_security_entry vlan_name default
mac_address 00-01-30-10-2C-C7 port 6

Success.

DES-3800:admin#
```

## clear port\_security\_entry

<b>Purpose</b>	Used to clear MAC address entries learned from a specified port for the port security function.
<b>Syntax</b>	<b>clear port_security_entry ports &lt;portlist&gt;</b>
<b>Description</b>	This command is used to clear MAC address entries which were learned by the Switch by a specified port. This command only relates to the port security function.
<b>Parameters</b>	<i>&lt;portlist&gt;</i> – Specifies a port or port range to clear.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To clear a port security entry by port:

```
DES-3800:admin# clear port_security_entry port 6
```

```
Command: clear port_security_entry port 6
```

```
Success.
```

```
DES-3800:admin#
```

## show port\_security

<b>Purpose</b>	Used to display the current port security configuration.
<b>Syntax</b>	<b>show port_security {ports &lt;portlist&gt;}</b>
<b>Description</b>	This command is used to display port security information of the Switch's ports. The information displayed includes port security, admin state, maximum number of learning address and lock mode.
<b>Parameters</b>	<portlist> – Specifies a port or range of ports to be viewed.
<b>Restrictions</b>	User Account Command Level – All

Example usage:

To display the port security configuration:

```
DES-3800:admin#show port_security ports 1-5
```

```
Command: show port_security ports 1-5
```

Port	Admin State	Max. Learning Addr.	Lock Address Mode
1	Disabled	1	DeleteOnReset
2	Disabled	1	DeleteOnReset
3	Disabled	1	DeleteOnReset
4	Disabled	1	DeleteOnReset
5	Disabled	1	DeleteOnReset

```
CTRL+C ESC q Quit SPACE n Next Page p Previous Page r Refresh
```

## enable port\_security trap\_log

<b>Purpose</b>	Used to enable the trap log for port security.
<b>Syntax</b>	<b>enable port_security trap_log</b>
<b>Description</b>	This command, along with the <b>disable port_security trap_log</b> , will enable and disable the sending of log messages to the Switch's log and SNMP agent when the port security of the Switch has been triggered.
<b>Parameters</b>	None.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To enable the port security trap log setting:

```
DES-3800:admin##enable port_security trap_log
```

```
Command: enable port_security trap_log
```

```
Success.
```

```
DES-3800:admin#
```

**disable port\_security trap\_log**

<b>Purpose</b>	Used to disable the trap log for port security.
<b>Syntax</b>	<b>disable port_security trap_log</b>
<b>Description</b>	This command, along with the <b>enable port_security trap_log</b> , will enable and disable the sending of log messages to the Switch's log and SNMP agent when the port security of the Switch has been triggered.
<b>Parameters</b>	None.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To enable the port security trap log setting:

```
DES-3800:admin#enable port_security trap_log
Command: enable port_security trap_log

Success.

DES-3800:admin#
```

## NETWORK MANAGEMENT (SNMP) COMMANDS

The network management commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

The xStack DES-3800 Switch Series supports the Simple Network Management Protocol (SNMP) versions 1, 2c, and 3. After enabling SNMP, you can specify which version of SNMP you want to use to monitor and control the Switch. three versions of SNMP vary in the level of security provided between the management station and the network device. The following table lists the security features of the three SNMP versions:

SNMP Version	Authentication Method	Description
v1	Community String	Community String is used for authentication – NoAuthNoPriv
v2c	Community String	Community String is used for authentication – NoAuthNoPriv
v3	Username	Username is used for authentication – NoAuthNoPriv
v3	MD5 or SHA	Authentication is based on the HMAC-MD5 or HMAC-SHA algorithms – AuthNoPriv
v3	MD5 DES or SHA DES	Authentication is based on the HMAC-MD5 or HMAC-SHA algorithms – AuthPriv. DES 56-bit encryption is added based on the CBC-DES (DES-56) standard

The SNMP commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create snmp user	<username 32> <groupname 32> {encrypted [by_password auth [md5 <auth_password 8-16 >   sha <auth_password 8-20 >] priv [none   des <priv_password 8-16>]   by_key auth [md5 <auth_key 32-32>   sha <auth_key 40-40>] priv [none   des <priv_key 32-32>]]}]}
delete snmp user	<username 32>
show snmp user	
create snmp view	<view_name 32> <oid> view_type [included   excluded]
delete snmp view	<view_name 32> [all   oid]
show snmp view	<view_name 32>
create snmp community	<community_string 32> view <view_name 32> [read_only   read_write]
delete snmp community	<community_string 32>
show snmp community	<community_string 32>
config snmp engineID	<snmp_engineID>
show snmp engineID	
create snmp group	<groupname 32> {v1   v2c   v3 [noauth_nopriv   auth_nopriv   auth_priv]} {read_view <view_name 32>   write_view <view_name 32>   notify_view <view_name 32>}
delete snmp group	<groupname 32>
show snmp groups

config snmp system_location	<sw_location>
config snmp system_name	<sw_name>
enable rmon	
disable rmon	
enable snmp	
disable snmp	

Each command is listed, in detail, in the following sections.

## create snmp user

<b>Purpose</b>	Used to create a new SNMP user and adds the user to an SNMP group that is also created by this command.
<b>Syntax</b>	<b>create snmp user</b> <username 32> <groupname 32> {encrypted [by_password auth [md5 <auth_password 8-16>   sha <auth_password 8-20>] priv [none   des <priv_password 8-16>]   by_key auth [md5 <auth_key 32-32>   sha <auth_key 40-40>] priv [none   des <priv_key 32-32>]]}
<b>Description</b>	<p>The <b>create snmp user</b> command creates a new SNMP user and adds the user to an SNMP group that is also created by this command. SNMP ensures:</p> <p>Message integrity – Ensures that packets have not been tampered with during transit.</p> <p>Authentication – Determines if an SNMP message is from a valid source.</p> <p>Encryption – Scrambles the contents of messages to prevent it from being viewed by an unauthorized source.</p>
<b>Parameters</b>	<p>&lt;username 32&gt; – An alphanumeric name of up to 32 characters that will identify the new SNMP user.</p> <p>&lt;groupname 32&gt; – An alphanumeric name of up to 32 characters that will identify the SNMP group with which the new SNMP user will be associated.</p> <p><i>encrypted</i> – Allows the user to choose a type of authorization for authentication using SNMP. The user may choose:</p> <ul style="list-style-type: none"> <li><i>by_password</i> – Requires the SNMP user to enter a password for authentication and privacy. The password is defined by specifying the <i>auth_password</i> below. This method is recommended.</li> <li><i>by_key</i> – Requires the SNMP user to enter a encryption key for authentication and privacy. The key is defined by specifying the key in hex form below. This method is not recommended.</li> </ul> <p><i>auth</i> - The user may also choose the type of authentication algorithms used to authenticate the snmp user. The choices are:</p> <p><i>md5</i> – Specifies that the HMAC-MD5-96 authentication level will be used. <i>md5</i> may be utilized by entering one of the following:</p> <ul style="list-style-type: none"> <li>&lt;auth password 8-16&gt; - An alphanumeric sting of between 8 and 16 characters that will be used to authorize the agent to receive packets for the host.</li> <li>&lt;auth_key 32-32&gt; - Enter an alphanumeric sting of exactly 32 characters, in hex form, to define the key that will be used to authorize the agent to receive packets for the host.</li> </ul> <p><i>sha</i> – Specifies that the HMAC-SHA-96 authentication level will be used.</p> <ul style="list-style-type: none"> <li>&lt;auth password 8-20&gt; - An alphanumeric sting of between 8 and 20 characters that will be used to authorize the agent to receive packets for the host.</li> <li>&lt;auth_key 40-40&gt; - Enter an alphanumeric sting of exactly 40 characters, in hex form, to define the key that will be used to authorize the agent to receive packets for the host.</li> </ul> <p><i>priv</i> – Adding the <i>priv</i> (privacy) parameter will allow for encryption in addition to the authentication algorithm for higher security. The user may choose:</p> <ul style="list-style-type: none"> <li><i>none</i> – Adding this parameter will add no encryption.</li> <li><i>des</i> – Adding this parameter will allow for a 56-bit encryption to be added using the DES-56 standard using: <ul style="list-style-type: none"> <li>&lt;priv_password 8-16&gt; - An alphanumeric string of between 8 and 16 characters that will be used to encrypt the contents of messages the host sends to the agent.</li> <li>&lt;priv_key 32-32&gt; - Enter an alphanumeric key string of exactly 32 characters, in hex form, that will be used to encrypt the contents of messages the host sends to the agent.</li> </ul> </li> </ul>
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To create an SNMP user on the Switch:

```
DES-3800:admin#create snmp user dlink default encrypted by_password auth md5
canadian priv none
Command: create snmp user dlink default encrypted by_password auth md5
canadian priv none

Success.

DES-3800:admin#
```

## delete snmp user

<b>Purpose</b>	Used to remove an SNMP user from an SNMP group and also to delete the associated SNMP group.
<b>Syntax</b>	<b>delete snmp user &lt;username 32&gt;</b>
<b>Description</b>	The <b>delete snmp user</b> command removes an SNMP user from its SNMP group and then deletes the associated SNMP group.
<b>Parameters</b>	<username 32> – An alphanumeric string of up to 32 characters that identifies the SNMP user that will be deleted.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To delete a previously entered SNMP user on the Switch:

```
DES-3800:admin#delete snmp user dlink
Command: delete snmp user dlink

Success.

DES-3800:admin#
```

## show snmp user

<b>Purpose</b>	Used to display information about each SNMP username in the SNMP group username table.
<b>Syntax</b>	<b>show snmp user</b>
<b>Description</b>	The <b>show snmp user</b> command displays information about each SNMP username in the SNMP group username table.
<b>Parameters</b>	None.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To display the SNMP users currently configured on the Switch:

```
DES-3800:admin#show snmp user
```

```
Command: show snmp user
```

Username	Group Name	SNMP Version	Auth-Protocol	PrivProtocol
initial	initial	V3	None	None

```
Total Entries: 1
```

```
DES-3800:admin#
```

## create snmp view

Purpose	Used to assign views to community strings to limit which MIB objects and SNMP manager can access.
Syntax	<b>create snmp view &lt;view_name 32&gt; &lt;oid&gt; view_type [included   excluded]</b>
Description	The <b>create snmp view</b> command assigns views to community strings to limit which MIB objects an SNMP manager can access.
Parameters	<p><b>&lt;view_name 32&gt;</b> – An alphanumeric string of up to 32 characters that identifies the SNMP view that will be created.</p> <p><b>&lt;oid&gt;</b> – The object ID that identifies an object tree (MIB tree) that will be included or excluded from access by an SNMP manager.</p> <p><b>view type</b> – Sets the view type to be:</p> <ul style="list-style-type: none"> <li><i>included</i> – Include this object in the list of objects that an SNMP manager can access.</li> <li><i>excluded</i> – Exclude this object from the list of objects that an SNMP manager can access.</li> </ul>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To create an SNMP view:

```
DES-3800:admin#create snmp view dlinkview 1.3.6 view_type included
```

```
Command: create snmp view dlinkview 1.3.6 view_type included
```

```
Success.
```

```
DES-3800:admin#
```

## delete snmp view

Purpose	Used to remove an SNMP view entry previously created on the Switch.
Syntax	<b>delete snmp view &lt;view_name 32&gt; [all   &lt;oid&gt;]</b>
Description	The <b>delete snmp view</b> command is used to remove an SNMP view previously created on the Switch.
Parameters	<p><b>&lt;view_name 32&gt;</b> – An alphanumeric string of up to 32 characters that identifies the SNMP view to be deleted.</p> <p><b>all</b> – Specifies that all of the SNMP views on the Switch will be deleted.</p> <p><b>&lt;oid&gt;</b> – The object ID that identifies an object tree (MIB tree) that will be deleted from the Switch.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete a previously configured SNMP view from the Switch:

```
DES-3800:admin#delete snmp view dlinkview all
Command: delete snmp view dlinkview all

Success.

DES-3800:admin#
```

## show snmp view

Purpose	Used to display an SNMP view previously created on the Switch.
Syntax	<b>show snmp view {&lt;view_name 32&gt;}</b>
Description	The <b>show snmp view</b> command displays an SNMP view previously created on the Switch.
Parameters	<view_name 32> – An alphanumeric string of up to 32 characters that identifies the SNMP view that will be displayed.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To display SNMP view configuration:

```
DES-3800:admin#show snmp view
Command: show snmp view

Vacm View Table Settings
View Name          Subtree          View Type
-----
ReadView           1                Included
WriteView          1                Included
NotifyView         1.3.6            Included
restricted         1.3.6.1.2.1.1    Included
restricted         1.3.6.1.2.1.11   Included
restricted         1.3.6.1.6.3.10.2.1 Included
restricted         1.3.6.1.6.3.11.2.1 Included
restricted         1.3.6.1.6.3.15.1.1 Included
CommunityView      1                Included
CommunityView      1.3.6.1.6.3       Excluded
CommunityView      1.3.6.1.6.3.1     Included

Total Entries: 11

DES-3800:admin#
```

## create snmp community

Purpose	Used to create an SNMP community string to define the relationship between the SNMP manager and an agent. The community string acts like a password to permit access to the agent on the Switch. One or more of the following characteristics can be associated with the community string: An Access List of IP addresses of SNMP managers that are permitted to use the community string to gain access to the Switch's SNMP agent. An MIB view that defines the subset of all MIB objects that will be accessible to the SNMP community.
---------	--

## create snmp community

	<i>read_write</i> or <i>read_only</i> level permission for the MIB objects accessible to the SNMP community.
Syntax	<b>create snmp community &lt;community_string 32&gt; view &lt;view_name 32&gt; [read_only   read_write]</b>
Description	The <b>create snmp community</b> command is used to create an SNMP community string and to assign access-limiting characteristics to this community string.
Parameters	<p><i>&lt;community_string 32&gt;</i> – An alphanumeric string of up to 32 characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch's SNMP agent.</p> <p><i>view &lt;view_name 32&gt;</i> – An alphanumeric string of up to 32 characters that is used to identify the group of MIB objects that a remote SNMP manager is allowed to access on the Switch.</p> <p><i>read_only</i> – Specifies that SNMP community members using the community string created with this command can only read the contents of the MIBs on the Switch.</p> <p><i>read_write</i> – Specifies that SNMP community members using the community string created with this command can read from and write to the contents of the MIBs on the Switch.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To create the SNMP community string “dlink:”

```
DES-3800:admin#create snmp community dlink view ReadView read_write
Command: create snmp community dlink view ReadView read_write

Success.

DES-3800:admin#
```

## delete snmp community

Purpose	Used to remove a specific SNMP community string from the Switch.
Syntax	<b>delete snmp community &lt;community_string 32&gt;</b>
Description	The <b>delete snmp community</b> command is used to remove a previously defined SNMP community string from the Switch.
Parameters	<i>&lt;community_string 32&gt;</i> – An alphanumeric string of up to 32 characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch's SNMP agent.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete the SNMP community string “dlink:”

```
DES-3800:admin#delete snmp community dlink
Command: delete snmp community dlink

Success.

DES-3800:admin#
```

## show snmp community

Purpose	Used to display SNMP community strings configured on the Switch.
Syntax	<b>show snmp community &lt;community_string 32&gt;</b>
Description	The <b>show snmp community</b> command is used to display SNMP community strings that are configured on the Switch.
Parameters	<b>&lt;community_string 32&gt;</b> – An alphanumeric string of up to 32 characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch's SNMP agent.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To display the currently entered SNMP community strings:

```
DES-3800:admin#show snmp community
Command: show snmp community

SNMP Community Table

Community Name      View Name      Access Right
-----
dlink               ReadView      read_write
private            CommunityView read_write
public             CommunityView read_only

Total Entries: 3

DES-3800:admin#
```

## config snmp engineID

Purpose	Used to configure a name for the SNMP engine on the Switch.
Syntax	<b>config snmp engineID &lt;snmp_engineID&gt;</b>
Description	The <b>config snmp engineID</b> command configures a name for the SNMP engine on the Switch.
Parameters	<b>&lt;snmp_engineID&gt;</b> – An alphanumeric string that will be used to identify the SNMP engine on the Switch.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To give the SNMP agent on the Switch the name “0035636666”

```
DES-3800:admin#config snmp engineID 0035636666
Command: config snmp engineID 0035636666

Success.

DES-3800:admin#
```

## show snmp engineID

Purpose	Used to display the identification of the SNMP engine on the Switch.
Syntax	<b>show snmp engineID</b>
Description	The <b>show snmp engineID</b> command displays the identification of the SNMP engine on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To display the current name of the SNMP engine on the Switch:

```
DES-3800:admin#show snmp engineID
Command: show snmp engineID

SNMP Engine ID : 0035636666

DES-3800:admin#
```

## create snmp group

<b>Purpose</b>	Used to create a new SNMP group, or a table that maps SNMP users to SNMP views.
<b>Syntax</b>	<b>create snmp group &lt;groupname 32&gt; [v1   v2c   v3 [noauth_nopriv   auth_nopriv   auth_priv]] {read_view &lt;view_name 32&gt;   write_view &lt;view_name 32&gt;   notify_view &lt;view_name 32&gt;}</b>
<b>Description</b>	The <b>create snmp group</b> command creates a new SNMP group, or a table that maps SNMP users to SNMP views.
<b>Parameters</b>	<p><b>&lt;groupname 32&gt;</b> – An alphanumeric name of up to 32 characters that will identify the SNMP group with which the new SNMP user will be associated.</p> <p><b>v1</b> – Specifies that SNMP version 1 will be used. The Simple Network Management Protocol (SNMP), version 1, is a network management protocol that provides a means to monitor and control network devices.</p> <p><b>v2c</b> – Specifies that SNMP version 2c will be used. The SNMP v2c supports both centralized and distributed network management strategies. It includes improvements in the Structure of Management Information (SMI) and adds some security features.</p> <p><b>v3</b> – Specifies that the SNMP version 3 will be used. SNMP v3 provides secure access to devices through a combination of authentication and encrypting packets over the network. SNMP v3 adds:</p> <ul style="list-style-type: none"> <li>• Message integrity – Ensures that packets have not</li> </ul>

**create snmp group**

been tampered with during transit.

- Authentication – Determines if an SNMP message is from a valid source.
- Encryption – Scrambles the contents of messages to prevent it being viewed by an unauthorized source.

*noauth\_nopriv* – Specifies that there will be no authorization and no encryption of packets sent between the Switch and a remote SNMP manager.

*auth\_nopriv* – Specifies that authorization will be required, but there will be no encryption of packets sent between the Switch and a remote SNMP manager.

*auth\_priv* – Specifies that authorization will be required, and that packets sent between the Switch and a remote SNMP manager will be encrypted.

*read\_view* – Specifies that the SNMP group being created can request SNMP messages.

*write\_view* – Specifies that the SNMP group being created has write privileges.

*notify\_view* – Specifies that the SNMP group being created can receive SNMP trap messages generated by the Switch's SNMP agent.

- *<view\_name 32>* – An alphanumeric string of up to 32 characters that is used to identify the group of MIB objects that a remote SNMP manager is allowed to access on the Switch.

**Restrictions** User Account Command Level – Administrator and Operator

Example usage:

To create an SNMP group named “sg1:”

```
DES-3800:admin#create snmp group sg1 v3 noauth_nopriv read_view v1
write_view v1 notify_view v1
```

```
Command: create snmp group sg1 v3 noauth_nopriv read_view v1
write_view v1 notify_view v1
```

Success.

```
DES-3800:admin#
```

**delete snmp group**

**Purpose** Used to remove an SNMP group from the Switch.

**Syntax** **delete snmp group <groupname 32>**

**Description** The **delete snmp group** command is used to remove an SNMP group from the Switch.

**Parameters** *<groupname 32>* – An alphanumeric name of up to 32 characters that will identify the SNMP group with which the new SNMP user will be associated.

**Restrictions** User Account Command Level – Administrator and Operator

Example usage:

To delete the SNMP group named “sg1”.

```
DES-3800:admin#delete snmp group sg1
Command: delete snmp group sg1

Success.

DES-3800:admin#
```

## show snmp groups

<b>Purpose</b>	Used to display the group-names of SNMP groups currently configured on the Switch. The security model, level, and status of each group are also displayed.
<b>Syntax</b>	<b>show snmp groups</b>
<b>Description</b>	The <b>show snmp groups</b> command displays the group-names of SNMP groups currently configured on the Switch. The security model, level, and status of each group are also displayed.
<b>Parameters</b>	None.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To display the currently configured SNMP groups on the Switch:

```
DES-3800:admin#show snmp groups
Command: show snmp groups

Vacm Access      Table Settings

## create snmp host

Purpose	Used to create a recipient of SNMP traps generated by the Switch's SNMP agent.
Syntax	<b>create snmp host</b> <ipaddr> [v1   v2c   v3 [noauth_nopriv   auth_nopriv   auth_priv] <auth_string 32>]
Description	The <b>create snmp host</b> command creates a recipient of SNMP traps generated by the Switch's SNMP agent.
Parameters	<p>&lt;ipaddr&gt; – The IP address of the remote management station that will serve as the SNMP host for the Switch.</p> <p>v1 – Specifies that SNMP version 1 will be used. The Simple Network Management Protocol (SNMP), version 1, is a network management protocol that provides a means to monitor and control network devices.</p> <p>v2c – Specifies that SNMP version 2c will be used. The SNMP v2c supports both centralized and distributed network management strategies. It includes improvements in the Structure of Management Information (SMI) and adds some security features.</p> <p>v3 – Specifies that the SNMP version 3 will be used. SNMP v3 provides secure access to devices through a combination of authentication and encrypting packets over the network. SNMP v3 adds:</p> <ul style="list-style-type: none"> <li>• Message integrity – ensures that packets have not been tampered with during transit.</li> <li>• Authentication – determines if an SNMP message is from a valid source.</li> <li>• Encryption – scrambles the contents of messages to prevent it being viewed by an unauthorized source.</li> </ul> <p>noauth_nopriv – Specifies that there will be no authorization and no encryption of packets sent between the Switch and a remote SNMP manager.</p> <p>auth_nopriv – Specifies that authorization will be required, but there will be no encryption of packets sent between the Switch and a remote SNMP manager.</p> <p>auth_priv – Specifies that authorization will be required, and that packets sent between the Switch and a remote SNMP manager will be encrypted.</p> <ul style="list-style-type: none"> <li>• &lt;auth_string 32&gt; – An alphanumeric string used to authorize a remote SNMP manager to access the Switch's SNMP agent.</li> </ul>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To create an SNMP host to receive SNMP messages:

```
DES-3800:admin#create snmp host 10.48.74.100 v3 auth_priv public
Command: create snmp host 10.48.74.100 v3 auth_priv public

Success.

DES-3800:admin#
```

## delete snmp host

Purpose	Used to remove a recipient of SNMP traps generated by the Switch's SNMP agent.
Syntax	<b>delete snmp host &lt;ipaddr&gt;</b>
Description	The <b>delete snmp host</b> command deletes a recipient of SNMP traps generated by the Switch's SNMP agent.
Parameters	<ipaddr> – The IP address of a remote SNMP manager that will receive SNMP traps generated by the Switch's SNMP agent.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete an SNMP host entry:

```
DES-3800:admin#delete snmp host 10.48.74.100
Command: delete snmp host 10.48.74.100

Success.

DES-3800:admin#
```

## show snmp host

Purpose	Used to display the recipient of SNMP traps generated by the Switch's SNMP agent.
Syntax	<b>show snmp host {&lt;ipaddr&gt;}</b>
Description	The <b>show snmp host</b> command is used to display the IP addresses and configuration information of remote SNMP managers that are designated as recipients of SNMP traps that are generated by the Switch's SNMP agent.
Parameters	<ipaddr> – The IP address of a remote SNMP manager that will receive SNMP traps generated by the Switch's SNMP agent.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To display the currently configured SNMP hosts on the Switch:

```
DES-3800:admin#show snmp host
```

```
Command: show snmp host
```

#### SNMP Host Table

Host IP Address	SNMP Version	Community Name/SNMPv3 User Name
10.48.76.23	V2c	private
10.48.74.100	V3 authpriv	public

```
Total Entries: 2
```

```
DES-3800:admin#
```

## create trusted\_host

Purpose	Used to create the trusted host.
Syntax	<b>create trusted_host &lt;ipaddr&gt;</b>
Description	The <b>create trusted_host</b> command creates the trusted host. The Switch allows specification of up to four IP addresses that are allowed to manage the Switch via in-band SNMP or TELNET based management software. These IP addresses must be members of the Management VLAN. If no IP addresses are specified, then there is nothing to prevent any IP address from accessing the Switch, provided the user knows the Username and Password.
Parameters	<ipaddr> – The IP address of the trusted host to be created.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To create the trusted host:

```
DES-3800:admin#create trusted_host 10.48.74.121
```

```
Command: create trusted_host 10.48.74.121
```

```
Success.
```

```
DES-3800:admin#
```

## show trusted\_host

Purpose	Used to display a list of trusted hosts entered on the Switch using the <b>create trusted_host</b> command above.
Syntax	<b>show trusted_host &lt;ipaddr&gt;</b>
Description	This command is used to display a list of trusted hosts entered on the Switch using the <b>create trusted_host</b> command above.
Parameters	<ipaddr> – The IP address of the trusted host.
Restrictions	User Account Command Level – Administrator and Operator

Example Usage:

To display the list of trust hosts:

```
DES-3800:admin#show trusted_host
```

```
Command: show trusted_host
```

### Management Stations

```
IP Address
```

```
-----  
10.53.13.94
```

```
Total Entries: 1
```

```
DES-3800:admin#
```

## delete trusted\_host

Purpose	Used to delete a trusted host entry made using the <i>create trusted_host</i> command above.
Syntax	<b>delete trusted_host &lt;ipaddr&gt;</b>
Description	This command is used to delete a trusted host entry made using the <b>create trusted_host</b> command above.
Parameters	<ipaddr> – The IP address of the trusted host.
Restrictions	User Account Command Level – Administrator and Operator

Example Usage:

To delete a trusted host with an IP address 10.48.74.121:

```
DES-3800:admin#delete trusted_host 10.48.74.121
```

```
Command: delete trusted_host 10.48.74.121
```

```
Success.
```

```
DES-3800:admin#
```

## enable snmp traps

Purpose	Used to enable SNMP trap support.
Syntax	<b>enable snmp traps</b>
Description	The <b>enable snmp traps</b> command is used to enable SNMP trap support on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable SNMP trap support on the Switch:

```
DES-3800:admin#enable snmp traps
```

```
Command: enable snmp traps
```

```
Success.
```

```
DES-3800:admin#
```

## enable snmp authenticate traps

Purpose	Used to enable SNMP authentication trap support.
Syntax	<b>enable snmp authenticate traps</b>
Description	This command is used to enable SNMP authentication trap support on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example Usage:

To turn on SNMP authentication trap support:

```
DES-3800:admin#enable snmp authenticate traps
Command: enable snmp authenticate traps

Success.

DES-3800:admin#
```

## show snmp traps

Purpose	Used to show SNMP trap support on the Switch .
Syntax	<b>show snmp traps</b>
Description	This command is used to view the SNMP trap support status currently configured on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To view the current SNMP trap support:

```
DES-3800:admin#show snmp traps
Command: show snmp traps

SNMP Traps      : Enabled
Authenticate Traps : Enabled

DES-3800:admin#
```

## disable snmp traps

Purpose	Used to disable SNMP trap support on the Switch.
Syntax	<b>disable snmp traps</b>
Description	This command is used to disable SNMP trap support on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To prevent SNMP traps from being sent from the Switch:

```
DES-3800:admin#disable snmp traps
Command: disable snmp traps

Success.

DES-3800:admin#
```

## disable snmp authenticate traps

Purpose	Used to disable SNMP authentication trap support.
Syntax	<b>disable snmp authenticate traps</b>
Description	This command is used to disable SNMP authentication support on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example Usage:

To disable the SNMP authentication trap support:

```
DES-3800:admin#disable snmp authenticate traps
Command: disable snmp authenticate traps

Success.

DES-3800:admin#
```

## config snmp system\_contact

Purpose	Used to enter the name of a contact person who is responsible for the Switch.
Syntax	<b>config snmp system_contact &lt;sw_contact&gt;</b>
Description	The <b>config snmp system_contact</b> command is used to enter the name and/or other information to identify a contact person who is responsible for the Switch. A maximum of 255 character can be used.
Parameters	<sw_contact> - A maximum of 255 characters is allowed. A NULL string is accepted if there is no contact.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure the Switch contact to “MIS Department II”:

```
DES-3800:admin#config snmp system_contact MIS Department II
Command: config snmp system_contact MIS Department II

Success.

DES-3800:admin#
```

**config snmp system\_location**

Purpose	Used to enter a description of the location of the Switch.
Syntax	<b>config snmp system_location &lt;sw_location&gt;</b>
Description	The <b>config snmp system_location</b> command is used to enter a description of the location of the Switch. A maximum of 255 characters can be used.
Parameters	<sw_location> - A maximum of 255 characters is allowed. A NULL string is accepted if there is no location desired.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure the Switch location for “HQ 5F”:

```
DES-3800:admin#config snmp system_location HQ 5F
```

```
Command: config snmp system_location HQ 5F
```

```
Success.
```

```
DES-3800:admin#
```

**config snmp system\_name**

Purpose	Used to configure the name for the Switch.
Syntax	<b>config snmp system_name &lt;sw_name&gt;</b>
Description	The <b>config snmp system_name</b> command configures the name of the Switch.
Parameters	<sw_name> - A maximum of 255 characters is allowed. A NULL string is accepted if no name is desired.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure the Switch name for “DES-3828 Switch”:

```
DES-3800:admin#config snmp system_name DES-3828 Switch
```

```
Command: config snmp system_name DES-3828 Switch
```

```
Success.
```

```
DES-3800:admin#
```

**enable rmon**

Purpose	Used to enable RMON on the Switch.
Syntax	<b>enable rmon</b>
Description	This command is used, in conjunction with the <b>disable rmon</b> command below, to enable and disable remote monitoring (RMON) on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable RMON:

```
DES-3800:admin#enable rmon
Command: enable rmon

Success.

DES-3800:admin#
```

## disable rmon

Purpose	Used to disable RMON on the Switch.
Syntax	<b>disable rmon</b>
Description	This command is used, in conjunction with the <b>enable rmon</b> command above, to enable and disable remote monitoring (RMON) on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable RMON:

```
DES-3800:admin#disable rmon
Command: disable rmon

Success.

DES-3800:admin#
```

## enable snmp

Purpose	Used to enable SNMP on the Switch.
Syntax	<b>enable snmp</b>
Description	This command is used, in conjunction with the <b>disable snmp</b> command below, to enable and disable SNMP on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable SNMP:

```
DES-3800:admin#enable snmp
Command: enable snmp

Success.

DES-3800:admin#
```

## **disable snmp**

Purpose	Used to disable RMON on the Switch.
Syntax	<b>disable snmp</b>
Description	This command is used, in conjunction with the <b>enable snmp</b> command above, to enable and disable SNMP on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable SNMP:

```
DES-3800:admin#disable snmp
```

```
Command: disable snmp
```

```
Success.
```

```
DES-3800:admin#
```

## SWITCH UTILITY COMMANDS

The download/upload commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
download	[firmware <ipaddr> <path_filename 64> {image_id <int 1-2>}   configuration <ipaddr> <path_filename 64> {[increment   config_id <int 1-2>}]
config firmware image_id	<int 1-2> [delete   boot_up]
show firmware_information	
show config	[current_config   config_in_nvram <config_id 1-2>   information]
config configuration	<config_id 1-2> [boot_up   active   delete]
upload	[configuration <ipaddr> <path_filename 64> {<config_id 1-2>}   log <ipaddr> <path_filename 64>]
enable autoconfig	
disable autoconfig	
show autoconfig	
ping	<ipaddr> {times <value 1-255>} {timeout <sec 1-99>}
traceroute	<ipaddr> {ttl <value 1-60>   port <value 30000-64900>   timeout <sec 1-65535>   probe <value <1-9>}

Each command is listed, in detail, in the following sections.

download	
Purpose	Used to download and install new firmware or a Switch configuration file from a TFTP server.
Syntax	<b>[firmware &lt;ipaddr&gt; &lt;path_filename 64&gt; {image_id &lt;int 1-2&gt;}   configuration &lt;ipaddr&gt; &lt;path_filename 64&gt; {[increment   config_id &lt;int 1-2&gt;}]</b>
Description	This command is used to download a new firmware or a Switch configuration file from a TFTP server.
Parameters	<p><i>firmware</i> – Download and install new firmware on the Switch from a TFTP server.</p> <p><i>configuration</i> – Download a switch configuration file from a TFTP server.</p> <p><i>&lt;ipaddr&gt;</i> – The IP address of the TFTP server.</p> <p><i>&lt;path_filename 64&gt;</i> – The DOS path and filename of the firmware or switch configuration file on the TFTP server. For example, C:\3226S.had.</p> <p><i>image_id &lt;int 1-2&gt;</i> - Specify the working section ID. The Switch can hold two firmware versions for the user to select from, which are specified by section ID.</p> <p><i>increment</i> – Allows the download of a partial switch configuration file. This allows a file to be downloaded that will change only the switch parameters explicitly stated in the configuration file. All other switch parameters will remain unchanged.</p> <p><i>config_id &lt;int 1-2&gt;</i> - Allows the user to choose a configuration file ID where the configuration file will be downloaded. The Switch can</p>

## download

	hold 2 configuration files in its memory, with the first files being the default configuration file used upon boot up, unless changed manually by the user.
Restrictions	The TFTP server must be on the same IP subnet as the Switch. User Account Command Level – Administrator only

Example usage:

To download a configuration file:

```
DES-3800:admin#download configuration 10.48.74.121 c:\cfg\setting.txt
Command: download configuration 10.48.74.121 c:\cfg\setting.txt

Connecting to server..... Done.
Download configuration..... Done.

DES-3800:admin#
DES-3800:admin##-----
DES-3800:admin##                DES-3828 Configuration
DES-3800:admin##
DES-3800:admin##                Firmware: Build 3.00-B15
DES-3800:admin##                Copyright(C) 2000-2004 D-Link Corporation. All rights reserved.
DES-3800:admin##-----
DES-3800:admin#
DES-3800:admin#
DES-3800:admin## BASIC
DES-3800:admin#
DES-3800:admin#config serial_port baud_rate 9600 auto_logout 10_minutes
Command: config serial_port baud_rate 9600 auto_logout 10_minutes
```

The download configuration command will initiate the loading of the various settings in the order listed in the configuration file. When the file has been successfully loaded the message “End of configuration file for DES-3828” appears followed by the command prompt.

```
DES-3800:admin#disable authen_policy
Command: disable authen_policy

Success.

DES-3800:admin#
DES-3800:admin##-----
DES-3800:admin##                End of configuration file for DES-3828
DES-3800:admin##-----
DES-3800:admin#
```

**config firmware**

Purpose	Used to configure the firmware section as a boot up section, or to delete the firmware section
Syntax	<b>config firmware image_id &lt;int 1-2&gt; [delete   boot_up]</b>
Description	This command is used to configure the firmware section. The user may choose to remove the firmware section or use it as a boot up section.
Parameters	<p><i>image_id</i> – Specifies the working section. The Switch can hold two firmware versions for the user to select from, which are specified by image ID.</p> <p><i>&lt;int 1-2&gt;</i> - Select the ID number of the firmware in the Switch's memory to be configured.</p> <p><i>delete</i> – Entering this parameter will delete the specified firmware section.</p> <p><i>boot_up</i> – Entering this parameter will specify the firmware image ID as a boot up section.</p>
Restrictions	User Account Command Level – Administrator only

Example usage:

To configure firmware section 1 as a boot up section:

```
DES-3800:admin# config firmware section_id 1 boot_up
Command: config firmware section_id 1 boot_up

Success.

DES-3800:admin#
```

**show firmware information**

Purpose	Used to display the firmware section information.
Syntax	<b>show firmware information</b>
Description	This command is used to display the firmware section information.
Parameters	None.
Restrictions	User Account Command Level – Administrator only

Example usage:

To display the current firmware information on the Switch:

```
DES-3800:admin#show firmware information
Command: show firmware information
```

ID	Version	Size(B)	Update Time	From	User
1	2.00-B20	1360471	00000 days 00:00:00	Serial Port (PROM)	Unknown
*2	1.00-B21	2052372	00000 days 00:00:56	10.53.13.94	Anonymous

'\*' means boot up section  
 (T) means firmware update thru TELNET  
 (S) means firmware update thru SNMP  
 (W) means firmware update thru WEB  
 (SIM) means firmware update through Single IP Management

Free space: 3145728 bytes

```
DES-3800:admin#
```

**show config**

Purpose	Used to display the current or saved version of the configuration settings of the switch.
Syntax	<b>show config [current_config   config_in_nvram &lt;config_id 1-2&gt;   information]</b>
Description	<p>Use this command to display all the configuration settings that are saved to NV RAM or display the configuration settings as they are currently configured. Use the keyboard to list settings one line at a time (Enter), one page at a time (Space) or view all (a).</p> <p>The configuration settings are listed by category in the following order:</p> <ol style="list-style-type: none"> <li>1. Basic (serial port, Telnet and web management status)</li> <li>2. storm control</li> <li>3. IP group management</li> <li>4. syslog</li> <li>5. QoS</li> <li>6. port mirroring</li> <li>7. traffic segmentation</li> <li>8. port</li> <li>9. port lock</li> <li>10. 8021x</li> <li>11. SNMPv3</li> <li>12. management (SNMP traps RMON)</li> <li>13. vlan</li> <li>14. FDB (forwarding data base)</li> <li>15. MAC address table notification</li> <li>16. STP</li> <li>17. SSH</li> <li>18. SSL</li> <li>19. ACL</li> <li>20. SNTP</li> <li>21. IP route</li> <li>22. LACP</li> <li>23. ARP</li> <li>24. IP</li> <li>25. IGMP snooping</li> <li>26. access authentication control (TACACS etc.)</li> </ol>
Parameters	<p><i>current_config</i> – Entering this parameter will display configurations entered without being saved to NVRAM.</p> <p><i>config_in_NVRAM</i> - Entering this parameter will display configurations entered and saved to NVRAM.</p> <ul style="list-style-type: none"> <li>• <i>config_id 1-2</i> - Adding this parameter will allow the user to specify which configuration file out of the possible 2 files, are to be displayed.</li> </ul> <p><i>information</i> – Entering this parameter will display information regarding configuration files loaded and saved on the Switch.</p>
Restrictions	User Account Command Level – All

Example usage:

To view the current configuration settings:

```

DES-3800:admin#show config current_config
Command: show config current_config

#-----
#
#           DES-3828 Configuration
#
#           Firmware: Build 3.00-B15
#           Copyright(C) 2000-2004 D-Link Corporation. All rights reserved.
#-----

# BASIC

config serial_port baud_rate 9600 auto_logout 10_minutes
enable telnet 23
enable web 80

# STORM

config traffic control 1-5 broadcast disable multicast disable dlf
disable threshold 128

# GM

config sim candidate
CTRL+C ESC q Quit SPACE n Next Page ENTER Next Entry a All

```

Example usage:

To view saved configuration file information saved on the Switch:

```

DES-3800:admin#show config information
Command: show config information

ID   Version   Size (B)   Update Time           From           User
----
*1   2.00.B19  10603      2006/02/24 18:04:46   Local Saved

Note: * indicates the next boot up configuration
(T) means configuration update through TELNET
(S) means configuration update through SNMP
(W) means configuration update through WEB

DES-3800:admin#

```

## config configuration

Purpose	Used to configure the configuration section as a boot up section, or to delete the firmware section
Syntax	<b>config configuration &lt;config_id 1-2&gt; [boot_up   active   delete]</b>
Description	This command is used to configure the configuration section. The user may choose to remove the configuration section, use it as a boot up or active section.
Parameters	<p><b>&lt;config_id 1-2&gt;</b> – Specifies the working section. The Switch can hold two firmware versions for the user to select from, which are specified by configuration ID.</p> <p><b>boot_up</b> – Entering this parameter will specify the configuration ID as a boot up section.</p> <p><b>active</b> – Entering this parameter will first load and then activate this configuration file on the switch.</p> <p><b>delete</b> – Entering this parameter will delete the specified configuration</p>

## config configuration

section.

Restrictions User Account Command Level – Administrator only

Example usage:

To configure firmware section 1 as a boot up configuration section:

```
DES-3800:admin# config configuration 1 boot_up
Command: config configuration 1 boot_up

Success.

DES-3800:admin#
```

## upload

Purpose	Used to upload the current switch settings or the switch history log to a TFTP.
Syntax	<b>upload [configuration &lt;ipaddr&gt; &lt;path_filename 64&gt; {&lt;config_id 1-2&gt;   log &lt;ipaddr&gt; &lt;path_filename 64&gt;}]</b>
Description	This command is used to upload either the Switch's current settings or the Switch's history log to a TFTP server.
Parameters	<p><i>configuration</i> – Specifies that the Switch's current settings will be uploaded to the TFTP server.</p> <p><i>log</i> – Specifies that the switch history log will be uploaded to the TFTP server.</p> <p><i>&lt;ipaddr&gt;</i> – The IP address of the TFTP server. The TFTP server must be on the same IP subnet as the Switch.</p> <p><i>&lt;path_filename 64&gt;</i> – Specifies the location of the Switch configuration file on the TFTP server. This file will be replaced by the uploaded file from the Switch.</p> <p><i>&lt;config 1-2&gt;</i> - Enter the configuration file ID number of the place where to store the uploaded configuration file. The Switch can hold two configuration files in its memory, of which, ID 1 will be the default boot up settings, unless configured differently by the user. If no parameter is chosen here, the default location for a new configuration file would be ID 1.</p>
Restrictions	The TFTP server must be on the same IP subnet as the Switch. User Account Command Level – Administrator and Operator

Example usage:

To upload a configuration file:

```
DES-3800:admin#upload configuration 10.48.74.121 c:\cfg\log.txt
Command: upload configuration 10.48.74.121 c:\cfg\log.txt

Connecting to server..... Done.
Upload configuration.....Done.

DES-3800:admin#
```

**enable autoconfig**

Purpose	Used to activate the autoconfiguration function for the Switch. This will load a previously saved configuration file for current use.
Syntax	<b>enable autoconfig</b>
Description	When autoconfig is enabled on the Switch, the DHCP reply will contain a configuration file and path name. It will then request the file from the TFTP server specified in the reply. When autoconfig is enabled, the ipif settings will automatically become DHCP client.
Parameters	None.
Restrictions	<p>When autoconfig is enabled, the Switch becomes a DHCP client automatically (same as: <b>config ipif System dhcp</b>). The DHCP server must have the TFTP server IP address and configuration file name, and be configured to deliver this information in the data field of the DHCP reply packet. The TFTP server must be running and have the requested configuration file in its base directory when the request is received from the Switch. Consult the DHCP server and TFTP server software instructions for information on loading a configuration file.</p> <p>If the Switch is unable to complete the autoconfiguration process the previously saved local configuration file present in Switch memory will be loaded.</p> <p>User Account Command Level – Administrator and Operator</p>

**NOTE:** Dual-purpose (DHCP/TFTP) server utility software may require entry of the configuration file name and path within the user interface. Alternatively, the DHCP software may require creating a separate ext file with the configuration file name and path in a specific directory on the server. Consult the documentation for the DHCP server software if you are unsure.

Example usage:

To enable autoconfiguration on the Switch:

```
DES-3800:admin#enable autoconfig
Command: enable autoconfig

Success.

DES-3800:admin#
```

When autoconfig is enabled and the Switch is rebooted, the normal login screen will appear for a few moments while the autoconfig request (i.e. download configuration) is initiated. The console will then display the configuration parameters as they are loaded from the configuration file specified in the DHCP or TFTP server. This is exactly the same as using a **download configuration** command. After the entire Switch configuration is loaded, the Switch will automatically “logout” the server. The configuration settings will be saved automatically and become the active configuration.

Upon booting up the autoconfig process is initiated, the console screen will appear similar to the example below. The configuration settings will be loaded in normal order.

## DES-3828 Fast Ethernet Switch Command Line Interface

Firmware: Build 3.00-B15

Copyright(C) 2000-2004 D-Link Corporation. All rights reserved.

DES-3800:admin#

DES-3800:admin#

DES-3800:admin#download configuration 10.41.44.44 c:\cfg\setting.txt

Command: download configuration 10.41.44.44 c:\cfg\setting.txt

Connecting to server..... Done.

Download configuration..... Done.

The very end of the autoconfig process including the logout appears like this:

DES-3800:admin#disable authen\_policy

Command: disable authen\_policy

Success.

DES-3800:admin#

DES-3800:admin##-----

DES-3800:admin## End of configuration file for DES-3828

DES-3800:admin#

\*\*\*\*\*

\* Logout \*

\*\*\*\*\*

**NOTE:** With autoconfig enabled, the Switch ipif settings now define the Switch as a DHCP client. Use the **show switch** command to display the new IP settings status.

### disable autoconfig

Purpose	Use this to deactivate autoconfiguration from DHCP.
Syntax	<b>disable autoconfig</b>
Description	This instructs the Switch not to accept autoconfiguration instruction from the DHCP server. This does not change the IP settings of the Switch. The ipif settings will continue as DHCP client until changed with the config ipif command.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To stop the autoconfiguration function:

```
DES-3800:admin#disable autoconfig
```

```
Command: disable autoconfig
```

```
Success.
```

```
DES-3800:admin#
```

## show autoconfig

Purpose	Used to display the current autoconfig status of the Switch.
Syntax	<b>show autoconfig</b>
Description	This will list the current status of the autoconfiguration function.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To upload an autoconfiguration-:

```
DES-3800:admin#show autoconfig
```

```
Command: show autoconfig
```

```
Autoconfig disabled.
```

```
Success.
```

```
DES-3800:admin#
```

## ping

Purpose	Used to test the connectivity between network devices.
Syntax	<b>ping &lt;ipaddr&gt; {times &lt;value 1-255&gt;} {timeout &lt;sec 1-99&gt;}</b>
Description	The ping command sends Internet Control Message Protocol (ICMP) echo messages to a remote IP address. The remote IP address will then “echo” or return the message. This is used to confirm connectivity between the Switch and the remote device.
Parameters	<p><i>&lt;ipaddr&gt;</i> - Specifies the IP address of the host.</p> <p><i>times &lt;value 1-255&gt;</i> - The number of individual ICMP echo messages to be sent. A value of 0 will send an infinite ICMP echo messages. The maximum value is 255. The default is 0.</p> <p><i>timeout &lt;sec 1-99&gt;</i> - Defines the time-out period while waiting for a response from the remote device. A value of 1 to 99 seconds can be specified. The default is 1 second</p>
Restrictions	User Account Command Level – Administrator only

Example usage:

To ping the IP address 10.48.74.121 four times:

```
DES-3800:admin#ping 10.48.74.121 times 4
```

```
Command: ping 10.48.74.121
```

```
Reply from 10.48.74.121, time<10ms
```

```
Reply from 10.48.74.121, time<10ms
```

```
Reply from 10.48.74.121, time<10ms
```

```
Reply from 10.48.74.121, time<10ms
```

```
Ping statistics for 10.48.74.121
```

```
Packets: Sent =4, Received =4, Lost =0
```

```
DES-3800:admin#
```

## traceroute

Purpose	Used to trace the routed path between the Switch and a destination endstation.
Syntax	<b>traceroute &lt;ipaddr&gt; {ttl &lt;value 1-60&gt;   port &lt;value 30000-64900&gt;   timeout &lt;sec 1-65535&gt;   probe &lt;value &lt;1-9&gt;}</b>
Description	The traceroute command will trace a route between the Switch and a give host on the network.
Parameters	<p><b>&lt;ipaddr&gt;</b> - Specifies the IP address of the host.</p> <p><b>ttl &lt;value 1-60&gt;</b> - The time to live value of the trace route request. This is the maximum number of routers the traceroute command will cross while seeking the network path between two devices.</p> <p><b>port &lt;value 30000-64900&gt;</b> - The port number. Must be above 1024.The value range is from 30000 to 64900.</p> <p><b>timeout &lt;sec 1-65535&gt;</b> - Defines the time-out period while waiting for a response from the remote device. The user may choose an entry between 1 and 65535 seconds.</p> <p><b>probe &lt;value 1-9&gt;</b> - The probe value is the number of times the Switch will send probe packets to the next hop on the intended traceroute path. The default is 1.</p>
Restrictions	User Account Command Level – Administrator only

Example usage:

To trace the routed path between the Switch and 10.48.74.121.

```
DES-3800:admin#traceroute 10.48.74.121 probe 3
```

```
Command: traceroute 10.48.74.121 probe 3
```

```
1 <10ms 10.254.254.251
```

```
2 <10ms 10.55.25.35
```

```
3 <10ms 10.22.35.1
```

```
DES-3800:admin#
```

## NETWORK MONITORING COMMANDS

The network monitoring commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
show packet ports	<portlist>
show error ports	<portlist>
show utilization	[cpu   ports {<portlist>}]
clear counters	{ports <portlist>}
clear log	
show log	index <value 1-65535>
enable syslog	
disable syslog	
show syslog	
create syslog host	<index 1-4> ipaddress <ipaddr> {severity [informational   warning   all]   facility [local0   local1   local2   local3   local4   local5   local6   local7]   udp_port <udp_port_number>   state [enable   disable]}
config syslog host	[all   <index 1-4>] {severity [informational   warning   all]   facility [local0   local1   local2   local3   local4   local5   local6   local7]   udp_port <udp_port_number>   ipaddress <ipaddr>   state [enable   disable]}
delete syslog host	[<index 1-4>   all]
show syslog host	{<index 1-4>}
config system_severity	[trap   log   all] [critical   warning   information]
show system_severity	

Each command is listed, in detail, in the following sections.

### show packet ports

Purpose	Used to display statistics about the packets sent and received by the Switch.
Syntax	<b>show packet ports &lt;portlist&gt;</b>
Description	This command is used to display statistics about packets sent and received by ports specified in the <portlist>.
Parameters	<portlist> – Specifies a port or range of ports to be displayed.
Restrictions	User Account Command Level – All

Example usage:

To display the packets analysis for port 2:

```
DES-3800:admin#show packet ports 2
Command: show packet ports 2

Port number : 2

```

Frame Size	Frame Counts	Frame/sec	Frame Type	Total	Total/sec
64	3275	10	RX Bytes	408973	1657
65-127	755	10	RX Frames	395	19
128-255	316	1			
256-511	145	0	TX Bytes	7918	178
512-1023	15	0	TX Frames	111	2
1024-1518	0	0			
Unicast RX	152	1			
Multicast RX	557	2			
Broadcast RX	3686	16			

```

CTRL+C ESC q Quit SPACE n Next Page p Previous Page r Refresh

```

## show error ports

Purpose	Used to display the error statistics for a range of ports.
Syntax	<b>show error ports &lt;portlist&gt;</b>
Description	This command will display all of the packet error statistics collected and logged by the Switch for a given port list.
Parameters	<portlist> – Specifies a port or range of ports to be displayed.
Restrictions	User Account Command Level – All

Example usage:

To display the errors of the port 3 of module 1:

```
DES-3800:admin#show error ports 3
Command: show error ports 3

Port number : 1

```

	RX Frames		TX Frames
CRC Error	19	Excessive Deferral	0
Undersize	0	CRC Error	0
Oversize	0	Late Collision	0
Fragment	0	Excessive Collision	0
Jabber	11	Single Collision	0
Drop Pkts	20837	Collision	0

```

CTRL+C ESC q Quit SPACE n Next Page p Previous Page r Refresh

```

## show utilization

Purpose	Used to display real-time port and cpu utilization statistics.
Syntax	<b>show utilization [cpu   ports {&lt;portlist&gt;}]</b>
Description	This command will display the real-time port and CPU utilization statistics for the Switch.
Parameters	<i>cpu</i> – Entering this parameter will display the current CPU utilization of the Switch.

**show utilization**

*ports* - Entering this parameter will display the current port utilization of the Switch.

- *<portlist>* - Specifies a port or range of ports to be displayed.

Restrictions

User Account Command Level – All

Example usage:

To display the port utilization statistics:

```
DES-3800:admin#show utilization ports
Command: show utilization ports
```

Port	TX/sec	RX/sec	Util	Port	TX/sec	RX/sec	Util
1	0	0	0	22	0	0	0
2	0	0	0	23	0	0	0
3	0	0	0	24	0	0	0
4	0	0	0	25	0	26	1
5	0	0	0	26	0	0	0
6	0	0	0	27	0	0	0
7	0	0	0	28	0	0	0
8	0	0	0				
9	0	0	0				
10	0	0	0				
11	0	0	0				
12	0	0	0				
13	0	0	0				
14	0	0	0				
15	0	0	0				
16	0	0	0				
17	0	0	0				
18	0	0	0				
19	0	0	0				
20	0	0	0				
21	0	0	0				

CTRL+C ESC q Quit SPACE n Next Page p Previous Page r Refresh

Example usage:

To display the current CPU utilization:

```
DES-3800:admin#show utilization cpu
Command: show utilization cpu
```

**CPU utilization :**

---

Five seconds - 15%      One minute - 25%      Five minutes - 14%

```
DES-3800:admin#
```

**clear counters**

Purpose	Used to clear the Switch's statistics counters.
Syntax	<b>clear counters ports &lt;portlist&gt;</b>
Description	This command will clear the counters used by the Switch to compile statistics.

## clear counters

Parameters	<i>&lt;portlist&gt;</i> – Specifies a port or range of ports to be displayed.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To clear the counters:

```
DES-3800:admin#clear counters ports 2-9
Command: clear counters ports 2-9

Success.

DES-3800:admin#
```

## clear log

Purpose	Used to clear the Switch's history log.
Syntax	<b>clear log</b>
Description	This command will clear the Switch's history log.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To clear the log information:

```
DES-3800:admin#clear log
Command: clear log

Success.

DES-3800:admin#
```

## show log

Purpose	Used to display the switch history log.
Syntax	<b>show log index &lt;value 1-65535&gt; &gt;</b>
Description	This command will display the contents of the Switch's history log.
Parameters	<i>index &lt;value 1-65535&gt;</i> – This command will display the history log, beginning at 1 and ending at the value specified by the user in the <i>&lt;value 1-65535&gt;</i> field. If no parameter is specified, all history log entries will be displayed.
Restrictions	User Account Command Level – All

Example usage:

To display the switch history log:

```
DES-3800:admin#show log index 5
```

```
Command: show log index 5
```

Index	Time	Log Text
5	00000 days 00:01:09	Successful login through Console (Username: Anonymous)
4	00000 days 00:00:14	System started up
3	00000 days 00:00:06	Port 1 link up, 100Mbps FULL duplex
2	00000 days 00:00:01	Spanning Tree Protocol is disabled
1	00000 days 00:06:31	Configuration saved to flash (Username: Anonymous)

```
DES-3800:admin#
```

## enable syslog

Purpose	Used to enable the system log to be sent to a remote host.
Syntax	<b>enable syslog</b>
Description	The <b>enable syslog</b> command enables the system log to be sent to a remote host.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable the syslog function on the Switch:

```
DES-3800:admin#enable syslog
```

```
Command: enable syslog
```

```
Success.
```

```
DES-3800:admin#
```

## disable syslog

Purpose	Used to enable the system log to be sent to a remote host.
Syntax	<b>disable syslog</b>
Description	The <b>disable syslog</b> command enables the system log to be sent to a remote host.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable the syslog function on the Switch:

```
DES-3800:admin#disable syslog
```

```
Command: disable syslog
```

```
Success.
```

```
DES-3800:admin#
```

## show syslog

<b>Purpose</b>	Used to display the syslog protocol status as enabled or disabled.
<b>Syntax</b>	<b>show syslog</b>
<b>Description</b>	The <b>show syslog</b> command displays the syslog status as enabled or disabled.
<b>Parameters</b>	None.
<b>Restrictions</b>	User Account Command Level – All

Example usage:

To display the current status of the syslog function:

```
DES-3800:admin#show syslog
Command: show syslog

Syslog Global State: Enabled

DES-3800:admin#
```

## create syslog host

<b>Purpose</b>	Used to create a new syslog host.																		
<b>Syntax</b>	<b>create syslog host</b> <index 1-4> <b>ipaddress</b> <ipaddr> { <b>severity</b> [informational   warning   all]   <b>facility</b> [local0   local1   local2   local3   local4   local5   local6   local7]   <b>udp_port</b> <udp_port_number>   <b>state</b> [enable   disable]}																		
<b>Description</b>	The <b>create syslog host</b> command is used to create a new syslog host.																		
<b>Parameters</b>	<p>&lt;index 1-4&gt; – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.</p> <p><b>ipaddress</b> &lt;ipaddr&gt; – Specifies the IP address of the remote host where syslog messages will be sent.</p> <p><b>severity</b> – Severity level indicator, as shown below:</p> <p><b>Bold</b> font indicates that the corresponding severity level is currently supported on the Switch.</p> <table> <thead> <tr> <th>Numerical Code</th><th>Severity</th></tr> </thead> <tbody> <tr> <td>0</td><td>Emergency: system is unusable</td></tr> <tr> <td>1</td><td>Alert: action must be taken immediately</td></tr> <tr> <td>2</td><td>Critical: critical conditions</td></tr> <tr> <td>3</td><td>Error: error conditions</td></tr> <tr> <td><b>4</b></td><td><b>Warning: warning conditions</b></td></tr> <tr> <td>5</td><td>Notice: normal but significant condition</td></tr> <tr> <td><b>6</b></td><td><b>Informational: informational messages</b></td></tr> <tr> <td>7</td><td>Debug: debug-level messages</td></tr> </tbody> </table> <p><b>informational</b> – Specifies that informational messages will be sent to the remote host. This corresponds to number 6 from the list above.</p> <p><b>warning</b> – Specifies that warning messages will be sent to the remote host. This corresponds to number 4 from the list above.</p> <p><b>all</b> – Specifies that all of the currently supported syslog messages that are generated by the Switch will be sent to the remote host.</p> <p><b>facility</b> – Some of the operating system daemons and processes have been assigned Facility values. Processes and daemons that have not been explicitly assigned a Facility may use any of the "local use" facilities or they may use the "user-level" Facility. Those Facilities that have been designated</p>	Numerical Code	Severity	0	Emergency: system is unusable	1	Alert: action must be taken immediately	2	Critical: critical conditions	3	Error: error conditions	<b>4</b>	<b>Warning: warning conditions</b>	5	Notice: normal but significant condition	<b>6</b>	<b>Informational: informational messages</b>	7	Debug: debug-level messages
Numerical Code	Severity																		
0	Emergency: system is unusable																		
1	Alert: action must be taken immediately																		
2	Critical: critical conditions																		
3	Error: error conditions																		
<b>4</b>	<b>Warning: warning conditions</b>																		
5	Notice: normal but significant condition																		
<b>6</b>	<b>Informational: informational messages</b>																		
7	Debug: debug-level messages																		

**create syslog host**

are shown in the following: **Bold** font indicates the facility values that the Switch currently supports.

Numerical Code	Facility
0	kernel messages
1	user-level messages
2	mail system
3	system daemons
4	security/authorization messages
5	messages generated internally by syslog
6	line printer subsystem
7	network news subsystem
8	UUCP subsystem
9	clock daemon
10	security/authorization messages
11	FTP daemon
12	NTP subsystem
13	log audit
14	log alert
15	clock daemon
<b>16</b>	<b>local use 0 (local0)</b>
<b>17</b>	<b>local use 1 (local1)</b>
<b>18</b>	<b>local use 2 (local2)</b>
<b>19</b>	<b>local use 3 (local3)</b>
<b>20</b>	<b>local use 4 (local4)</b>
<b>21</b>	<b>local use 5 (local5)</b>
<b>22</b>	<b>local use 6 (local6)</b>
<b>23</b>	<b>local use 7 (local7)</b>

*local0* – Specifies that local use 0 messages will be sent to the remote host. This corresponds to number 16 from the list above.

*local1* – Specifies that local use 1 messages will be sent to the remote host. This corresponds to number 17 from the list above.

*local2* – Specifies that local use 2 messages will be sent to the remote host. This corresponds to number 18 from the list above.

*local3* – Specifies that local use 3 messages will be sent to the remote host. This corresponds to number 19 from the list above.

*local4* – Specifies that local use 4 messages will be sent to the remote host. This corresponds to number 20 from the list above.

*local5* – Specifies that local use 5 messages will be sent to the remote host. This corresponds to number 21 from the list above.

*local6* – Specifies that local use 6 messages will be sent to the remote host. This corresponds to number 22 from the list above.

*local7* – Specifies that local use 7 messages will be sent to the remote host. This corresponds to number 23 from the list above.

*udp\_port <udp\_port\_number>* – Specifies the UDP port number that the syslog protocol will use to send messages to the remote host.

*ipaddress <ipaddr>* – Specifies the IP address of the remote host where syslog messages will be sent.

*state [enable | disable]* – Allows the sending of syslog messages to the remote host, specified above, to be enabled and disabled.

**Restrictions**

User Account Command Level – Administrator and Operator

Example usage:

To create syslog host:

```
DES-3800:admin#create syslog host 1 ipaddress 10.1.1.1 state enable
Command: create syslog host 1 ipaddress 10.1.1.1 state enable

Success.

DES-3800:admin#
```

## config syslog host

<b>Purpose</b>	Used to configure the syslog protocol to send system log data to a remote host.
<b>Syntax</b>	<b>config syslog host</b> [ <b>all</b>   <b>&lt;index 1-4&gt;</b> ] { <b>severity</b> [ <b>informational</b>   <b>warning</b>   <b>all</b> ]   <b>facility</b> [ <b>local0</b>   <b>local1</b>   <b>local2</b>   <b>local3</b>   <b>local4</b>   <b>local5</b>   <b>local6</b>   <b>local7</b> ]   <b>udp_port</b> <b>&lt;udp_port_number&gt;</b>   <b>ipaddress</b> <b>&lt;ipaddr&gt;</b>   <b>state</b> [ <b>enable</b>   <b>disable</b> ]
<b>Description</b>	The <b>config syslog host</b> command is used to configure the syslog protocol to send system log information to a remote host.

<b>Parameters</b>	<p><b>&lt;index 1-4&gt;</b> – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.</p> <p><b>all</b> – Specify to configure all Syslog hosts.</p> <p><b>severity</b> – Severity level indicator. These are described in the following:  <b>Bold font indicates that the corresponding severity level is currently supported on the Switch.</b></p> <table border="1"> <thead> <tr> <th>Numerical Code</th><th>Severity</th></tr> </thead> <tbody> <tr> <td>0</td><td>Emergency: system is unusable</td></tr> <tr> <td>1</td><td>Alert: action must be taken immediately</td></tr> <tr> <td>2</td><td>Critical: critical conditions</td></tr> <tr> <td>3</td><td>Error: error conditions</td></tr> <tr> <td><b>4</b></td><td><b>Warning: warning conditions</b></td></tr> <tr> <td>5</td><td>Notice: normal but significant condition</td></tr> <tr> <td><b>6</b></td><td><b>Informational: informational messages</b></td></tr> <tr> <td>7</td><td>Debug: debug-level messages</td></tr> </tbody> </table> <p><b>informational</b> – Specifies that informational messages will be sent to the remote host. This corresponds to number 6 from the list above.</p> <p><b>warning</b> – Specifies that warning messages will be sent to the remote host. This corresponds to number 4 from the list above.</p> <p><b>all</b> – Specifies that all of the currently supported syslog messages that are generated by the Switch will be sent to the remote host.</p> <p><b>facility</b> – Some of the operating system daemons and processes have been assigned Facility values. Processes and daemons that have not been explicitly assigned a Facility may use any of the "local use" facilities or they may use the "user-level" Facility. Those Facilities that have been designated are shown in the following: <b>Bold font indicates the facility values the Switch currently supports.</b></p>	Numerical Code	Severity	0	Emergency: system is unusable	1	Alert: action must be taken immediately	2	Critical: critical conditions	3	Error: error conditions	<b>4</b>	<b>Warning: warning conditions</b>	5	Notice: normal but significant condition	<b>6</b>	<b>Informational: informational messages</b>	7	Debug: debug-level messages
Numerical Code	Severity																		
0	Emergency: system is unusable																		
1	Alert: action must be taken immediately																		
2	Critical: critical conditions																		
3	Error: error conditions																		
<b>4</b>	<b>Warning: warning conditions</b>																		
5	Notice: normal but significant condition																		
<b>6</b>	<b>Informational: informational messages</b>																		
7	Debug: debug-level messages																		

**config syslog host**

<b>Numerical Code</b>	<b>Facility</b>
0	kernel messages
1	user-level messages
2	mail system
3	system daemons
4	security/authorization messages
5	messages generated internally by syslog
6	line printer subsystem
7	network news subsystem
8	UUCP subsystem
9	clock daemon
10	security/authorization messages
11	FTP daemon
12	NTP subsystem
13	log audit
14	log alert
15	clock daemon
<b>16</b>	<b>local use 0 (local0)</b>
<b>17</b>	<b>local use 1 (local1)</b>
<b>18</b>	<b>local use 2 (local2)</b>
<b>19</b>	<b>local use 3 (local3)</b>
<b>20</b>	<b>local use 4 (local4)</b>
<b>21</b>	<b>local use 5 (local5)</b>
<b>22</b>	<b>local use 6 (local6)</b>
<b>23</b>	<b>local use 7 (local7)</b>

*local0* – Specifies that local use 0 messages will be sent to the remote host. This corresponds to number 16 from the list above.

*local1* – Specifies that local use 1 messages will be sent to the remote host. This corresponds to number 17 from the list above.

*local2* – Specifies that local use 2 messages will be sent to the remote host. This corresponds to number 18 from the list above.

*local3* – Specifies that local use 3 messages will be sent to the remote host. This corresponds to number 19 from the list above.

*local4* – Specifies that local use 4 messages will be sent to the remote host. This corresponds to number 20 from the list above.

*local5* – Specifies that local use 5 messages will be sent to the remote host. This corresponds to number 21 from the list above.

*local6* – Specifies that local use 6 messages will be sent to the remote host. This corresponds to number 22 from the list above.

*local7* – Specifies that local use 7 messages will be sent to the remote host. This corresponds to number 23 from the list above.

*udp\_port* <udp\_port\_number> – Specifies the UDP port number that the syslog protocol will use to send messages to the remote host.

*ipaddress* <ipaddr> – Specifies the IP address of the remote host where syslog messages will be sent.

*state* [enable | disable] – Allows the sending of syslog messages to the remote host, specified above, to be enabled and disabled.

**Restrictions**

User Account Command Level – Administrator and Operator

Example usage:

To configure a syslog host:

```
DES-3800:admin#config syslog host 1 severity all facility local0
Command: config syslog host all severity all facility local0

Success.

DES-3800:admin#
```

Example usage:

To configure a syslog host for all hosts:

```
DES-3800:admin#config syslog host all severity all facility local0
Command: config syslog host all severity all facility local0

Success.

DES-3800:admin#
```

## delete syslog host

<b>Purpose</b>	Used to remove a syslog host, that has been previously configured, from the Switch.
<b>Syntax</b>	<b>delete syslog host [&lt;index 1-4&gt;   all]</b>
<b>Description</b>	The <i>delete syslog host</i> command is used to remove a syslog host that has been previously configured from the Switch.
<b>Parameters</b>	<index 1-4> – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4. all – Specifies that the command will be applied to all hosts.
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To delete a previously configured syslog host:

```
DES-3800:admin#delete syslog host 4
Command: delete syslog host 4

Success.

DES-3800:admin#
```

## show syslog host

<b>Purpose</b>	Used to display the syslog hosts currently configured on the Switch.
<b>Syntax</b>	<b>show syslog host {&lt;index 1-4&gt;}</b>
<b>Description</b>	The <b>show syslog host</b> command is used to display the syslog hosts that are currently configured on the Switch.
<b>Parameters</b>	<index 1-4> – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.
<b>Restrictions</b>	User Account Command Level – All

Example usage:

To show Syslog host information:

```
DES-3800:admin#show syslog host
```

```
Command: show syslog host
```

```
Syslog Global State: Disabled
```

Host Id	Host IP Address	Severity	Facility	UDP port	Status
1	10.1.1.2	All	Local0	514	Disabled
2	10.40.2.3	All	Local0	514	Disabled
3	10.21.13.1	All	Local0	514	Disabled

```
Total Entries : 3
```

```
DES-3800:admin#
```

## config system\_severity

Purpose	To configure severity level of an alert required for log entry or trap message.
Syntax	<b>config system_severity [trap   log   all] [critical   warning   information]</b>
Description	<p>This command is used to configure the system severity levels on the Switch. When an event occurs on the Switch, a message will be sent to the SNMP agent (trap), the Switch's log or both. Events occurring on the Switch are separated into three main categories, these categories are NOT precisely the same as the parameters of the same name (see below).</p> <ul style="list-style-type: none"> <li>Information – Events classified as information are basic events occurring on the Switch that are not deemed as problematic, such as enabling or disabling various functions on the Switch.</li> <li>Warning - Events classified as warning are problematic events that are not critical to the overall function of the Switch but do require attention, such as unsuccessful downloads or uploads and failed logins.</li> <li>Critical – Events classified as critical are fatal exceptions occurring on the Switch, such as hardware failures or spoofing attacks.</li> </ul>
Parameters	<p>Choose one of the following to identify where severity messages are to be sent.</p> <ul style="list-style-type: none"> <li><i>trap</i> – Entering this parameter will define which events occurring on the Switch will be sent to a SNMP agent for analysis.</li> <li><i>log</i> – Entering this parameter will define which events occurring on the Switch will be sent to the Switch's log for analysis.</li> <li><i>all</i> – Entering this parameter will define which events occurring on the Switch will be sent to a SNMP agent and the Switch's log for analysis.</li> </ul> <p>Choose one of the following to identify what level of severity warnings are to be sent to the destination entered above.</p> <ul style="list-style-type: none"> <li><i>critical</i> – Entering this parameter along with the proper destination, stated above, will instruct the Switch to send only critical events to the Switch's log or SNMP agent.</li> <li><i>warning</i> – Entering this parameter along with the proper destination, stated above, will instruct the Switch to send critical and warning events to the Switch's log or SNMP agent.</li> <li><i>information</i> – Entering this parameter along with the proper destination, stated above, will instruct the switch to send informational, warning and critical events to the Switch's log or SNMP agent.</li> </ul>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure the system severity settings for critical traps only:

```
DES-3800:admin#config system_severity trap critical
Command: config system_severity trap critical

Success.

DES-3800:admin#
```

## show system\_severity

Purpose	To display the current severity settings set on the Switch.
Syntax	<b>show system_severity</b>
Description	This command is used to view the severity settings that have been implemented on the Switch using the <b>config system_severity</b> command.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To view the system severity settings currently implemented on the Switch:

```
DES-3800:admin#show system_severity
Command: show system_severity

system_severity log   : information
system_severity trap  : critical

DES-3800:admin#
```

## MULTIPLE SPANNING TREE PROTOCOL (MSTP) COMMANDS

This Switch supports three versions of the Spanning Tree Protocol; 802.1d STP, 802.1w Rapid STP and 802.1s MSTP. Multiple Spanning Tree Protocol, or MSTP, is a standard defined by the IEEE community that allows multiple VLANs to be mapped to a single spanning tree instance, which will provide multiple pathways across the network. Therefore, these MSTP configurations will balance the traffic load, preventing wide scale disruptions when a single spanning tree instance fails. This will allow for faster convergences of new topologies for the failed instance. Frames designated for these VLANs will be processed quickly and completely throughout interconnected bridges utilizing either of the three spanning tree protocols (STP, RSTP or MSTP). This protocol will also tag BPDU packets so receiving devices can distinguish spanning tree instances, spanning tree regions and the VLANs associated with them. These instances will be classified by an *instance\_id*. MSTP will connect multiple spanning trees with a Common and Internal Spanning Tree (CIST). The CIST will automatically determine each MSTP region, its maximum possible extent and will appear as one virtual bridge that runs a single spanning tree. Consequentially, frames assigned to different VLANs will follow different data routes within administratively established regions on the network, continuing to allow simple and full processing of frames, regardless of administrative errors in defining VLANs and their respective spanning trees. Each switch utilizing the MSTP on a network will have a single MSTP configuration that will have the following three attributes:

- A configuration name defined by an alphanumeric string of up to 32 characters (defined in the *config stp mst\_config\_id* command as *name <string>*).
- A configuration revision number (named here as a *revision\_level*) and;
- A 4096 element table (defined here as a *vid\_range*) which will associate each of the possible 4096 VLANs supported by the Switch for a given instance.

To utilize the MSTP function on the Switch, three steps need to be taken:

- The Switch must be set to the MSTP setting (*config stp version*).
- The correct spanning tree priority for the MSTP instance must be entered (*config stp priority*).
- VLANs that will be shared must be added to the MSTP Instance ID (*config stp instance\_id*).

The Multiple Spanning Tree Protocol commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
enable stp	
disable stp	
config stp version	[mstp   rstp   stp]
config stp	{maxage <value 6-40>   maxhops <value 1-20>   hellotime <1-10>   forwarddelay <value 4-30>   txholdcount <value 1-10>   fbpdu [enable   disable]   lbd [enable   disable]   lbd_recover_timer [0   <value 60-1000000>]}
config stp ports	<portlist> {externalCost [auto   <value 1-200000000>]   hellotime <value 1-10>   migrate [yes   no] edge [true   false]   p2p [true   false   auto]   state [enable   disable]   lbd [enable   disable]   fbpdu [enable   disable]}
create stp instance_id	<value 1-4>
config stp instance_id	<value 1-4> [add_vlan   remove_vlan] <vidlist>
delete stp instance_id	<value 1-4>
config stp priority	<value 0-61440> instance_id <value 0-4>
config stp mst_config_id	{revision_level <int 0-65535>   name <string>}
config stp mst_ports	<portlist> instance_id <value 0-4> {internalCost [auto   value 1-200000000]   priority <value 0-240>}
show stp	
show stp ports	{<portlist>}

Command	Parameters
show stp instance_id	{<value 0-4>}
show stp mst_config id	

Each command is listed, in detail, in the following sections.

### enable stp

Purpose	Used to globally enable STP on the Switch.
Syntax	<b>enable stp</b>
Description	This command allows the Spanning Tree Protocol to be globally enabled on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable STP, globally, on the Switch:

```
DES-3800:admin#enable stp
Command: enable stp

Success.

DES-3800:admin#
```

### disable stp

Purpose	Used to globally disable STP on the Switch.
Syntax	<b>disable stp</b>
Description	This command allows the Spanning Tree Protocol to be globally disabled on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable STP on the Switch:

```
DES-3800:admin#disable stp
Command: disable stp

Success.

DES-3800:admin#
```

### config stp version

Purpose	Used to globally set the version of STP on the Switch.
Syntax	<b>config stp version [mstp   rstp   stp]</b>
Description	This command allows the user to choose the version of the spanning tree to be implemented on the Switch.

## config stp version

Parameters	<p><i>mstp</i> – Selecting this parameter will set the Multiple Spanning Tree Protocol (MSTP) globally on the Switch.</p> <p><i>rstp</i> - Selecting this parameter will set the Rapid Spanning Tree Protocol (RSTP) globally on the Switch.</p> <p><i>stp</i> - Selecting this parameter will set the Spanning Tree Protocol (STP) globally on the Switch.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To set the Switch globally for the Multiple Spanning Tree Protocol (MSTP):

```
DES-3800:admin#config stp version mstp
```

```
Command: config stp version mstp
```

```
Success.
```

```
DES-3800:admin#
```

## config stp

Purpose	Used to setup STP, RSTP and MSTP on the Switch.
Syntax	<b>config stp {maxage &lt;value 6-40&gt;   maxhops &lt;value 1-20&gt;   hellotime &lt;1-10&gt;   forwarddelay &lt;value 4-30&gt;   txholdcount &lt;value 1-10&gt;   fbpdu [enable   disable]   lbd [enable   disable]   lbd_recover_timer [0   &lt;value 60-1000000&gt;}}</b>
Description	This command is used to setup the Spanning Tree Protocol (STP) for the entire switch. All commands here will be implemented for the STP version that is currently set on the Switch.
Parameters	<p><i>maxage</i> &lt;value 6-40&gt; – This value may be set to ensure that old information does not endlessly circulate through redundant paths in the network, preventing the effective propagation of the new information. Set by the Root Bridge, this value will aid in determining that the Switch has spanning tree configuration values consistent with other devices on the bridged LAN. If the value ages out and a BPDU has still not been received from the Root Bridge, the Switch will start sending its own BPDU to all other switches for permission to become the Root Bridge. If it turns out that your switch has the lowest Bridge Identifier, it will become the Root Bridge. The user may choose a time between 6 and 40 seconds. The default value is 20.</p> <p><i>maxhops</i> &lt;value 1-20&gt; - The number of hops between devices in a spanning tree region before the BPDU (bridge protocol data unit) packet sent by the Switch will be discarded. Each switch on the hop count will reduce the hop count by one until the value reaches zero. The Switch will then discard the BPDU packet and the information held for the port will age out. The user may set a hop count from 1 to 20. The default is 20.</p> <p><i>hellotime</i> &lt;value 1-10&gt; – The user may set the time interval between transmission of configuration messages by the root device in STP, or by the designated router in RSTP, thus stating that the Switch is still functioning. A time between 1 and 10 seconds may be chosen, with a default setting of 2 seconds.</p> <p>In MSTP, the spanning tree is configured by port and therefore, the <i>hellotime</i> must be set using the <b>configure stp ports</b> command for switches utilizing the Multiple Spanning Tree Protocol.</p>

## config stp

*forwarddelay* <value 4-30> – The maximum amount of time (in seconds) that the root device will wait before changing states. The user may choose a time between 4 and 30 seconds. The default is 15 seconds.

*txholdcount* <value 1-10> – The maximum number of BPDU Hello packets transmitted per interval. Default value = 3.

*fbpdu* [enable | disable] – Allows the forwarding of STP BPDU packets from other network devices when STP is disabled on the Switch. The default is *enable*.

*lbd* [enable | disable] – This feature is used to temporarily shutdown a port on the Switch when a BPDU packet has been looped back to the switch. When the Switch detects its own BPDU packet coming back, it signifies a loop on the network. STP will automatically be blocked and an alert will be sent to the administrator. The LBD STP port will restart (change to discarding state) when the **LBD Recover Time** times out. The Loopback Detection function will only be implemented on one port at a time. The default is enabled.

*lbd\_recover\_timer* [0 | <value 60-1000000>] – This field will set the time the STP port will wait before recovering the STP state set. 0 will denote that the LBD will never time out or restart until the administrator personally changes it. The user may also set a time between 60 and 1000000 seconds. The default is 60 seconds.

Restrictions

User Account Command Level – Administrator and Operator

Example usage:

To configure STP with maxage 18 and maxhops of 15:

```
DES-3800:admin#config stp maxage 18 maxhops 15
```

```
Command: config stp maxage 18 maxhops 15
```

```
Success.
```

```
DES-3800:admin#
```

## config stp ports

**Purpose** Used to setup STP on the port level.

**Syntax** **config stp ports** <portlist> {externalCost [auto | <value 1-200000000>] | hellotime <value 1-10> | migrate [yes | no] edge [true | false] | p2p [true | false | auto] | state [enable | disable] | lbd [enable | disable] | fbpdu [enable | disable]}

**Description** This command is used to create and configure STP for a group of ports.

**Parameters** <portlist> – Specifies a range of ports to be configured. The beginning and end of the port list range are separated by a dash. For example, 1-4 specifies all of the ports between port 1 and port 4.

*externalCost* – This defines a metric that indicates the relative cost of forwarding packets to the specified port list. Port cost can be set automatically or as a metric value. The default value is *auto*.

*auto* – Setting this parameter for the external cost will automatically set the speed for forwarding packets to the specified port(s) in the list for optimal efficiency. Default port cost: 100Mbps port = 200000. Gigabit port = 20000.

<value 1-200000000> – Define a value between 1 and 200000000 to determine the external cost. The lower the number, the greater the

**config stp ports**

probability the port will be chosen to forward packets.

*hellotime* <value 1-10> – The time interval between transmission of configuration messages by the designated port, to other devices on the bridged LAN, thus stating that the Switch is still functioning. The user may choose a time between 1 and 10 seconds. The default is 2 seconds.

*migrate* [yes | no] – Setting this parameter as “yes” will set the ports to send out BPDU packets to other bridges, requesting information on their STP setting. If the Switch is configured for RSTP, the port will be capable to migrate from 802.1d STP to 802.1w RSTP. If the Switch is configured for MSTP, the port is capable of migrating from 802.1d STP to 802.1s MSTP. RSTP and MSTP can coexist with standard STP, however the benefits of RSTP and MSTP are not realized on a port where an 802.1d network connects to an 802.1w or 802.1s enabled network. Migration should be set as yes on ports connected to network stations or segments that are capable of being upgraded to 802.1w RSTP or 802.1s MSTP on all or some portion of the segment.

*edge* [true | false] – *true* designates the port as an edge port. Edge ports cannot create loops, however an edge port can lose edge port status if a topology change creates a potential for a loop. An edge port normally should not receive BPDU packets. If a BPDU packet is received it automatically loses edge port status. *false* indicates that the port does not have edge port status.

*p2p* [true | false | auto] – *true* indicates a point-to-point (P2P) shared link. P2P ports are similar to edge ports however they are restricted in that a P2P port must operate in full-duplex. Like edge ports, P2P ports transition to a forwarding state rapidly thus benefiting from RSTP. A *p2p* value of *false* indicates that the port cannot have *p2p* status. *auto* allows the port to have *p2p* status whenever possible and operate as if the *p2p* status were *true*. If the port cannot maintain this status (for example if the port is forced to half-duplex operation) the *p2p* status changes to operate as if the *p2p* value were *false*. The default setting for this parameter is *auto*.

*state* [enable | disable] – Allows STP to be enabled or disabled for the ports specified in the port list. The default is *enable*.

*lbd* [enable | disable] – Used to enable or disable the loopback detection function on the Switch for the ports configured above in the **config stp** command.

*fbpdu* [enable | disable] – Allows the forwarding of STP BPDU packets from other network devices when STP is disabled on the Switch. This function can only be in use when STP is globally disabled and forwarding BPDU packets is enabled. The default is *enabled* and BPDU packets will not be forwarded.

Restrictions      User Account Command Level – Administrator and Operator

Example usage:

To configure STP with path cost 19, hellotime set to 5 seconds, migration enable, and state enable for ports 1-5 of module 1.

```
DES-3800:admin#config stp ports 1-5 externalCost 19 hellotime 5
migrate yes state enable
```

```
Command: config stp ports 1-5 externalCost 19 hellotime 5
migrate yes state enable
```

```
Success.
```

```
DES-3800:admin#
```

**create stp instance\_id**

Purpose	Used to create a STP instance ID for MSTP.
Syntax	<b>create stp instance_id &lt;value 1-4&gt;</b>
Description	This command allows the user to create a STP instance ID for the Multiple Spanning Tree Protocol. There are 5 STP instances on the Switch (one internal CIST, unchangeable) and the user may create up to 4 instance IDs for the Switch.
Parameters	<value 1-4> - Enter a value between 1 and 4 to identify the Spanning Tree instance on the Switch.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To create a spanning tree instance 2:

```
DES-3800:admin#create stp instance_id 2
```

```
Command: create stp instance_id 2
```

```
Success.
```

```
DES-3800:admin#
```

**config stp instance\_id**

Purpose	Used to add or delete an STP instance ID.
Syntax	<b>config stp instance_id &lt;value 1-4&gt; [add_vlan   remove_vlan] &lt;vidlist&gt;</b>
Description	<p>This command is used to map VIDs (VLAN IDs) to previously configured STP instances on the Switch by creating an <i>instance_id</i>. A STP instance may have multiple members with the same MSTP configuration. There is no limit to the number of STP regions in a network but each region only supports a maximum of 16 spanning tree instances (one unchangeable default entry). VIDs can belong to only one spanning tree instance at a time.</p> <p>Note that switches in the same spanning tree region having the same STP <i>instance_id</i> must be mapped identically, and have the same configuration <i>revision_level</i> number and the same <i>name</i>.</p>
Parameters	<p>&lt;value 1-4&gt; - Enter a number between 1 and 4 to define the <i>instance_id</i>. The Switch supports 16 STP regions with one unchangeable default instance ID set as 0.</p> <p><i>add_vlan</i> – Along with the <i>vid_range</i> &lt;vidlist&gt; parameter, this command will add VIDs to the previously configured STP <i>instance_id</i>.</p> <p><i>remove_vlan</i> – Along with the <i>vid_range</i> &lt;vidlist&gt; parameter, this command will remove VIDs to the previously configured STP <i>instance_id</i>.</p> <p>&lt;vidlist&gt; – Specify the VID range from configured VLANs set on the Switch. Supported VIDs on the Switch range from ID number 1 to 4094.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure instance ID 2 to add VID 10:

```
DES-3800:admin#config stp instance_id 2 add_vlan 10
Command : config stp instance_id 2 add_vlan 10

Success.

DES-3800:admin#
```

Example usage:

To remove VID 10 from instance ID 2:

```
DES-3800:admin#config stp instance_id 2 remove_vlan 10
Command : config stp instance_id 2 remove_vlan 10

Success.

DES-3800:admin#
```

## delete stp instance\_id

Purpose	Used to delete a STP instance ID from the Switch.
Syntax	<b>delete stp instance_id &lt;value 1-4&gt;</b>
Description	This command allows the user to delete a previously configured STP instance ID from the Switch.
Parameters	<i>&lt;value 1-4&gt;</i> - Enter a value between 1 and 4 to identify the Spanning Tree instance on the Switch.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete stp instance ID 2 from the Switch.

```
DES-3800:admin#delete stp instance_id 2
Command: delete stp instance_id 2

Success.

DES-3800:admin#
```

## config stp priority

Purpose	Used to update the STP instance configuration.
Syntax	<b>config stp priority &lt;value 0-61440&gt; instance_id &lt;value 0-4&gt;</b>
Description	This command is used to update the STP instance configuration settings on the Switch. The MSTP will utilize the priority in selecting the root bridge, root port and designated port. Assigning higher priorities to STP regions will instruct the Switch to give precedence to the selected <i>instance_id</i> for forwarding packets. The lower the priority value set, the higher the priority.
Parameters	<p><i>priority &lt;value 0-61440&gt;</i> - Select a value between 0 and 61440 to specify the priority for a specified instance id for forwarding packets. The lower the value, the higher the priority. This entry must be divisible by 4096.</p> <p><i>instance_id &lt;value 0-4&gt;</i> - Enter the value corresponding to the previously configured instance id for which to set the priority value. An instance id of 0 denotes the default <i>instance_id</i> (CIST) internally set on</p>

**config stp priority**

the Switch.

Restrictions User Account Command Level – Administrator and Operator

Example usage:

To set the priority value for *instance\_id* 2 as 4096:**DES-3800:admin#config stp priority 4096 instance\_id 2****Command : config stp priority 4096 instance\_id 2****Success.****DES-3800:admin#****config stp mst\_config\_id**

Purpose Used to update the MSTP configuration identification.

Syntax **config stp mst\_config\_id {revision\_level <int 0-65535> | name <string>}**Description This command will uniquely identify the MSTP configuration currently configured on the Switch. Information entered here will be attached to BPDU packets as an identifier for the MSTP region to which it belongs. Switches having the same *revision\_level* and *name* will be considered as part of the same MSTP region.Parameters *revision\_level* <int 0-65535>– Enter a number between 0 and 65535 to identify the MSTP region. This value, along with the name will identify the MSTP region configured on the Switch. The default setting is 0.  
*name* <string> - Enter an alphanumeric string of up to 32 characters to uniquely identify the MSTP region on the Switch. This *name*, along with the *revision\_level* value will identify the MSTP region configured on the Switch. If no *name* is entered, the default name will be the MAC address of the device.

Restrictions User Account Command Level – Administrator and Operator

Example usage:

To configure the MSTP region of the Switch with *revision\_level* 10 and the *name* “Trinity”:**DES-3800:admin#config stp mst\_config\_id revision\_level 10 name Trinity****Command: config stp mst\_config\_id revision\_level 10 name Trinity****Success.****DES-3800:admin#****config stp mst\_ports**

Purpose Used to update the port configuration for a MSTP instance.

Syntax **config stp mst\_ports <portlist> instance\_id <value 0-4> {internalCost [auto | <value 1-20000000>] priority <value 0-240>}**Description This command will update the port configuration for a STP *instance\_id*. If a loop occurs, the MSTP function will use the port priority to select an interface to put into the forwarding state. Set a higher priority value for interfaces to be selected for forwarding first. In

## config stp mst\_ports

	instances where the priority value is identical, the MSTP function will implement the lowest port number into the forwarding state and other interfaces will be blocked. Remember that lower priority values mean higher priorities for forwarding packets.
Parameters	<p><b>&lt;portlist&gt;</b> - Specifies a range of ports to be configured. The beginning and end of the port list range are separated by a dash. For example, 1-4 specifies all of the ports between port 1 and port 4.</p> <p><b>instance_id &lt;value 0-4&gt;</b> - Enter a numerical value between 0 and 4 to identify the <i>instance_id</i> previously configured on the Switch. An entry of 0 will denote the CIST (Common and Internal Spanning Tree).</p> <p><b>internalCost</b> – This parameter is set to represent the relative cost of forwarding packets to specified ports when an interface is selected within a STP instance. The default setting is <i>auto</i>. There are two options:</p> <ul style="list-style-type: none"> <li><i>auto</i> – Selecting this parameter for the <i>internalCost</i> will set quickest route automatically and optimally for an interface. The default value is derived from the media speed of the interface.</li> <li><i>value 1-2000000</i> – Selecting this parameter with a value in the range of 1-2000000 will set the quickest route when a loop occurs. A lower <i>internalCost</i> represents a quicker transmission.</li> </ul> <p><b>priority &lt;value 0-240&gt;</b> - Enter a value between 0 and 240 to set the priority for the port interface. A higher priority will designate the interface to forward packets first. A lower number denotes a higher priority.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To designate ports 1 to 2 on, with instance ID 1, to have an auto internalCost and a priority of 0:

```
DES-3800:admin#config stp mst_ports 1-2 instance_id 1 internalCost auto priority 0
Command: config stp mst_ports 1-2 instance_id 1 internalCost auto priority 0

Success.

DES-3800:admin#
```

## show stp

Purpose	Used to display the Switch's current STP configuration.
Syntax	<b>show stp</b>
Description	This command displays the Switch's current STP configuration.
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To display the status of STP on the Switch:

**Status 1: STP enabled with STP compatible version**

```
DES-3800:admin#show stp
Command: show stp

STP Status           : Enabled
STP Version           : STP Compatible
Max Age               : 20
Hello Time            : 2
Forward Delay         : 15
Max Age               : 20
TX Hold Count         : 3
Forwarding BPDU       : Enabled
Loopback Detection    : Enabled
LBD Recover Time      : 60

DES-3800:admin#
```

Status 2 : STP enabled for RSTP

```
DES-3800:admin#show stp
Command: show stp

STP Status           : Enabled
STP Version           : RSTP
Max Age               : 20
Hello Time            : 2
Forward Delay         : 15
Max Age               : 20
TX Hold Count         : 3
Forwarding BPDU       : Enabled
Loopback Detection    : Enabled
LBD Recover Time      : 60

DES-3800:admin#
```

Status 3 : STP enabled for MSTP

```
DES-3800:admin#show stp
Command: show stp

STP Status           : Enabled
STP Version           : MSTP
Max Age               : 20
Forward Delay         : 15
Max Age               : 20
TX Hold Count         : 3
Forwarding BPDU       : Enabled
Loopback Detection    : Enabled
LBD Recover Time      : 60

DES-3800:admin#
```

## show stp ports

Purpose	Used to display the Switch's current <i>instance_id</i> configuration.
Syntax	<b>show stp ports &lt;portlist&gt;</b>
Description	This command displays the STP Instance Settings and STP Instance Operational Status currently implemented on the Switch.
Parameters	<portlist> – Specifies a range of ports to be configured. The beginning and end of the port list range are separated by a dash. For example, 1-4 specifies all of the ports between port 1 and port 4.
Restrictions	User Account Command Level – All

Example usage:

To show STP ports 1 through 9:

```
DES-3800:admin#show stp ports 1-9
Command: show stp ports 1-9

MSTP Port Information
-----
Port Index      : 1 , Hello Time: 2 / 2 , Port STP enabled LBD: Yes
External PathCost : Auto/200000 , Edge Port : No /No , P2P : Auto /Yes
Port Forward BPDU enabled

Msti  Designated Bridge  Internal PathCost  Prio  Status      Role
-----
0      8000/0050BA7120D6   200000             128   Forwarding   Root
1      8001/0053131A3324   200000             128   Forwarding   Master

CTRL+C ESC q Quit SPACE n Next Page p Previous Page r Refresh
```

## show stp instance\_id

Purpose	Used to display the Switch's STP instance configuration
Syntax	<b>show stp instance_id &lt;value 0-4&gt;</b>
Description	This command displays the Switch's current STP Instance Settings and the STP Instance Operational Status.
Parameters	<value 0-4> - Enter a value defining the previously configured <i>instance_id</i> on the Switch. An entry of 0 will display the STP configuration for the CIST internally set on the Switch.
Restrictions	User Account Command Level – All

Example usage:

To display the STP instance configuration for instance 0 (the internal CIST) on the Switch:

```
DES-3800:admin#show stp instance_id 0
Command: show stp instance_id 0

STP Instance Settings
-----
Instance Type      : CIST
Instance Status    : Enabled
Instance Priority   : 32768(bridge priority : 32768, sys ID ext : 0 )

STP Instance Operational Status
-----
Designated Root Bridge : 32766/00-90-27-39-78-E2
External Root Cost      : 200012
Regional Root Bridge   : 32768/00-53-13-1A-33-24
Internal Root Cost      : 0
Designated Bridge      : 32768/00-50-BA-71-20-D6
Root Port              : 1
Max Age                : 20
Forward Delay          : 15
Last Topology Change    : 856
Topology Changes Count  : 2987

CTRL+C ESC q Quit SPACE n Next Page p Previous Page r Refresh
```

**show stp mst\_config\_id**

Purpose	Used to display the MSTP configuration identification.
Syntax	<b>show stp mst_config_id</b>
Description	This command displays the Switch's current MSTP configuration identification.
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To show the MSTP configuration identification currently set on the Switch:

```
DES-3800:admin#show stp mst_config_id
Command: show stp mst_config_id

Current MST Configuration Identification
-----

Configuration Name : [00:10:20:33:45:00      ] Revision Level :0
MSTI ID   Vid list
-----
  CIST    1-4094

DES-3800:admin#
```

## FORWARDING DATABASE COMMANDS

The layer 2 forwarding database commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create fdb	<vlan_name 32> <macaddr> port <port>
create multicast_fdb	<vlan_name 32> <macaddr>
config multicast_fdb	<vlan_name 32> <macaddr> [add   delete] <portlist>
config fdb aging_time	<sec 10-1000000>
delete fdb	<vlan_name 32> <macaddr>
clear fdb	[vlan <vlan_name 32>   port <port>   all]
show multicast_fdb	{vlan <vlan_name 32>   mac_address <macaddr>}
show fdb	{port <port>   vlan <vlan_name 32>   mac_address <macaddr>   static   aging_time}
show ipfdb	{[ip_address <ipaddr>   interface <ipif_name 12>   port <port>]}

Each command is listed, in detail, in the following sections.

create fdb	
<b>Purpose</b>	Used to create a static entry to the unicast MAC address forwarding table (database).
<b>Syntax</b>	<b>create fdb &lt;vlan_name 32&gt; &lt;macaddr&gt; port &lt;port&gt;</b>
<b>Description</b>	This command will make an entry into the Switch's unicast MAC address forwarding database.
<b>Parameters</b>	<p><b>&lt;vlan_name 32&gt;</b> – The name of the VLAN on which the MAC address resides.</p> <p><b>&lt;macaddr&gt;</b> – The MAC address that will be added to the forwarding table.</p> <p><b>port &lt;port&gt;</b> – The port number corresponding to the MAC destination address. The Switch will always forward traffic to the specified device through this port.</p>
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To create a unicast MAC FDB entry:

```
DES-3800:admin#create fdb default 00-00-00-00-01-02 port 5
Command: create fdb default 00-00-00-00-01-02 port 5

Success.

DES-3800:admin#
```

**create multicast\_fdb**

<b>Purpose</b>	Used to create a static entry to the multicast MAC address forwarding table (database)
<b>Syntax</b>	<b>create multicast_fdb &lt;vlan_name 32&gt; &lt;macaddr&gt;</b>
<b>Description</b>	This command will make an entry into the Switch's multicast MAC address forwarding database.
<b>Parameters</b>	<p><i>&lt;vlan_name 32&gt;</i> – The name of the VLAN on which the MAC address resides.</p> <p><i>&lt;macaddr&gt;</i> – The MAC address that will be added to the forwarding table.</p>
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To create multicast MAC forwarding:

```
DES-3800:admin#create multicast_fdb default 01-00-00-00-00-01
Command: create multicast_fdb default 01-00-00-00-00-01

Success.

DES-3800:admin#
```

**config multicast\_fdb**

<b>Purpose</b>	Used to configure the Switch's multicast MAC address forwarding database.
<b>Syntax</b>	<b>config multicast_fdb &lt;vlan_name 32&gt; &lt;macaddr&gt; [add   delete] &lt;portlist&gt;</b>
<b>Description</b>	This command configures the multicast MAC address forwarding table.
<b>Parameters</b>	<p><i>&lt;vlan_name 32&gt;</i> – The name of the VLAN on which the MAC address resides.</p> <p><i>&lt;macaddr&gt;</i> – The MAC address that will be added to the multicast forwarding table.</p> <p><i>[add   delete]</i> – <i>add</i> will add ports to the forwarding table. <i>delete</i> will remove ports from the multicast forwarding table.</p> <p><i>&lt;portlist&gt;</i> – Specifies a port or range of ports to be configured.</p>
<b>Restrictions</b>	User Account Command Level – Administrator and Operator

Example usage:

To add multicast MAC forwarding:

```
DES-3800:admin#config multicast_fdb default 01-00-00-00-00-01 add 1-5
Command: config multicast_fdb default 01-00-00-00-00-01 add 1-5

Success.

DES-3800:admin#
```

**config fdb aging\_time**

Purpose	Used to set the aging time of the forwarding database.
Syntax	<b>config fdb aging_time &lt;sec 10-1000000&gt;</b>
Description	The aging time affects the learning process of the Switch. Dynamic forwarding table entries, which are made up of the source MAC addresses and their associated port numbers, are deleted from the table if they are not accessed within the aging time. The aging time can be from 10 to 1000000 seconds with a default value of 300 seconds. A very long aging time can result in dynamic forwarding table entries that are out-of-date or no longer exist. This may cause incorrect packet forwarding decisions by the Switch. If the aging time is too short however, many entries may be aged out too soon. This will result in a high percentage of received packets whose source addresses cannot be found in the forwarding table, in which case the Switch will broadcast the packet to all ports, negating many of the benefits of having a switch.
Parameters	<sec 10-1000000> – The aging time for the MAC address forwarding database value. The value in seconds may be between 10 and 1000000 seconds.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To set the FDB aging time:

```
DES-3800:admin#config fdb aging_time 300
Command: config fdb aging_time 300

Success.

DES-3800:admin#
```

**delete fdb**

Purpose	Used to delete an entry to the Switch's forwarding database.
Syntax	<b>delete fdb &lt;vlan_name 32&gt; &lt;macaddr&gt;</b>
Description	This command is used to delete a previous entry to the Switch's MAC address forwarding database.
Parameters	<vlan_name 32> – The name of the VLAN on which the MAC address resides. <macaddr> – The MAC address that will be added to the forwarding table.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete a permanent FDB entry:

```
DES-3800:admin#delete fdb default 00-00-00-00-01-02
Command: delete fdb default 00-00-00-00-01-02

Success.

DES-3800:admin#
```

Example usage:

To delete a multicast FDB entry:

```
DES-3800:admin#delete fdb default 01-00-00-00-01-02
Command: delete fdb default 01-00-00-00-01-02

Success.

DES-3800:admin#
```

## clear fdb

Purpose	Used to clear the Switch's forwarding database of all dynamically learned MAC addresses.
Syntax	<b>clear fdb [vlan &lt;vlan_name 32&gt;   port &lt;port&gt;   all]</b>
Description	This command is used to clear dynamically learned entries to the Switch's forwarding database.
Parameters	<p>&lt;vlan_name 32&gt; – The name of the VLAN on which the MAC address resides.</p> <p>port &lt;port&gt; – The port number corresponding to the MAC destination address. The Switch will always forward traffic to the specified device through this port.</p> <p>all – Clears all dynamic entries to the Switch's forwarding database.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To clear all FDB dynamic entries:

```
DES-3800:admin#clear fdb all
Command: clear fdb all

Success.

DES-3800:admin#
```

## show multicast\_fdb

Purpose	Used to display the contents of the Switch's multicast forwarding database.
Syntax	<b>show mulitcast_fdb [vlan &lt;vlan_name 32&gt;   mac_address &lt;macaddr&gt;]</b>
Description	This command is used to display the current contents of the Switch's multicast MAC address forwarding database.
Parameters	<p>&lt;vlan_name 32&gt; – The name of the VLAN on which the MAC address resides.</p> <p>&lt;macaddr&gt; – The MAC address that is present in the forwarding database table.</p>
Restrictions	User Account Command Level – All

Example usage:

To display multicast MAC address table:

```
DES-3800:admin#show multicast_fdb vlan default
```

```
Command: show multicast_fdb vlan default
```

```
VLAN Name      : default
MAC Address     : 01-00-5E-00-00-00
Egress Ports    : 1-5
Mode            : Static
```

```
Total Entries   : 1
```

```
DES-3800:admin#
```

## show fdb

Purpose	Used to display the current unicast MAC address forwarding database.
Syntax	<b>show fdb {port &lt;port&gt;   vlan &lt;vlan_name 32&gt;   mac_address &lt;macaddr&gt;   static   aging_time}</b>
Description	This command will display the current contents of the Switch's forwarding database.
Parameters	<p><i>port &lt;port&gt;</i> – The port number corresponding to the MAC destination address. The Switch will always forward traffic to the specified device through this port.</p> <p><i>&lt;vlan_name 32&gt;</i> – The name of the VLAN on which the MAC address resides.</p> <p><i>&lt;macaddr&gt;</i> – The MAC address that is present in the forwarding database table.</p> <p><i>static</i> – Displays the static MAC address entries.</p> <p><i>aging_time</i> – Displays the aging time for the MAC address forwarding database.</p>
Restrictions	User Account Command Level – All

Example usage:

To display unicast MAC address table:

DES-3800:admin#show fdb

Command: show fdb

Unicast MAC Address Aging Time = 300

VID	VLAN Name	MAC Address	Port	Type
1	default	00-00-39-34-66-9A	10	Dynamic
1	default	00-00-51-43-70-00	10	Dynamic

## show ipfdb

Purpose	Used to display the current network address forwarding database.
Syntax	<b>show ipfdb</b> {[ip_address <ipaddr>   interface <ipif_name 12>   port <port>]}
Description	The show ipfdb command displays the current network address forwarding database.
Parameters	<p><i>ip_address</i> &lt;ipaddr&gt; -Displays the specified IP address.</p> <p><i>interface</i> &lt;ipif_name 12 &gt; - Displays the ipfdb in the specified interface.</p> <p><i>port</i> &lt;port&gt; - Displays the ipfdb by the specified port number.</p>
Restrictions	User Account Command Level – All

Example usage:

To display unicast MAC address table:

DES-3800:admin#show fdb

Command: show fdb

Unicast MAC Address Aging Time = 300

VID	VLAN Name	MAC Address	Port	Type
---	-----	-----	----	-----

## BROADCAST STORM CONTROL COMMANDS

On a computer network, packets such as Multicast packets and Broadcast packets continually flood the network as normal procedure. At times, this traffic may increase do to a malicious endstation on the network or a malfunctioning device, such as a faulty network card. Thus, switch throughput problems will arise and consequently affect the overall performance of the switch network. To help rectify this packet storm, the Switch will monitor and control the situation.

The packet storm is monitored to determine if too many packets are flooding the network, based on the threshold level provided by the user. Once a packet storm has been detected, the Switch will drop packets coming into the Switch until the storm has subsided. This method can be utilized by selecting the **Drop** option of the **Action** field in the window below. The Switch will also scan and monitor packets coming into the Switch by monitoring the Switch's chip counter. This method is only viable for Broadcast and Multicast storms because the chip only has counters for these two types of packets. Once a storm has been detected (that is, once the packet threshold set below has been exceeded), the Switch will shutdown the port to all incoming traffic with the exception of STP BPDU packets, for a time period specified using the CountDown field. If this field times out and the packet storm continues, the port will be placed in a Shutdown Forever mode which will produce a warning message to be sent to the Trap Receiver. Once in Shutdown Forever mode, the only method of recovering this port is to manually recoup it using the **Port Configuration** window in the **Administration** folder and selecting the disabled port and returning it to an Enabled status. To utilize this method of Storm Control, choose the **Shutdown** option of the **Action** field in the window below.

The broadcast storm control commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config traffic control	[<portlist>   all] {broadcast [enable   disable]   multicast [enable   disable]   dlf [enable   disable]   action [drop   shutdown]   threshold <value 0-255000>   time_interval <sec 5-30>   countdown [0   <minute 5-30>]}
show traffic control	{[all   <portlist>]}
config traffic control_trap	[none   storm_occurred   storm_cleared   both]

Each command is listed, in detail, in the following sections.

config traffic control	
Purpose	Used to configure broadcast/multicast/dlf packet storm control. The software mechanism is provided to monitor the traffic rate in addition to the hardware storm control mechanism previously provided.
Syntax	<b>config traffic control</b> [<portlist>   all] { <b>broadcast</b> [enable   disable]   <b>multicast</b> [enable   disable]   <b>dlf</b> [enable   disable]   <b>action</b> [drop   shutdown]   <b>threshold</b> <value 0-255000>   <b>time_interval</b> <sec 5-30>   <b>countdown</b> [0   <minute 5-30>]}
Description	This command is used to configure broadcast/multicast/dlf storm control. By adding the new software traffic control mechanism, the user can now use both a hardware and software mechanism, the latter of which will now provide shutdown, recovery and trap notification functions for the Switch.
Parameters	<p>&lt;portlist&gt; – Used to specify a range of ports to be configured for traffic control.</p> <p><i>all</i> – Specifies all ports are to be configured for traffic control on the Switch.</p> <p><i>broadcast</i> [enable   disable] – Enables or disables broadcast storm control.</p> <p><i>multicast</i> [enable   disable] – Enables or disables multicast storm control.</p> <p><i>dlf</i> [enable   disable] – Enables or disables dlf traffic control.</p> <p><i>action</i> – Used to configure the action taken when a storm control has been</p>

## config traffic control

detected on the Switch. The user has two options:

- *drop* - Utilizes the hardware Traffic Control mechanism, which means the Switch's hardware will determine the Packet Storm based on the Threshold value stated and drop packets until the issue is resolved.
- *shutdown* - Utilizes the Switch's software Traffic Control mechanism to determine the Packet Storm occurring. Once detected, the port will deny all incoming traffic to the port except STP BPDU packets, which are essential in keeping the Spanning Tree operational on the Switch. If the countdown timer has expired and yet the Packet Storm continues, the port will be placed in Shutdown Forever mode and is no longer operational until the user manually resets the port using the **config ports enable** command. Choosing this option obligates the user to configure the *time\_interval* field as well, which will provide packet count samplings from the Switch's chip to determine if a Packet Storm is occurring.

*threshold <value 0-255000>* – The upper threshold at which the specified traffic control is switched on. The *<value>* is the number of broadcast/multicast/dlf packets, in packets per second (pps), received by the Switch that will trigger the storm traffic control measures. The default setting is 128000.

*time\_interval* - The Interval will set the time between Multicast and Broadcast packet counts sent from the Switch's chip to the Traffic Control function. These packet counts are the determining factor in deciding when incoming packets exceed the Threshold value.

*sec 5-30* - The Interval may be set between 5 and 30 seconds with the default setting of 5 seconds.

*countdown* - The countdown timer is set to determine the amount of time, in minutes, that the Switch will wait before shutting down the port that is experiencing a traffic storm. This parameter is only useful for ports configured as **shutdown** in the **action** field of this command and therefore will not operate for Hardware based Traffic Control implementations.

- *0* - 0 is the default setting for this field and 0 will denote that the port will never shutdown.
- *minutes 5-30* – Select a time from 5 to 30 minutes that the Switch will wait before shutting down. Once this time expires and the port is still experiencing packet storms, the port will be placed in shutdown forever mode and can only be manually recovered using the config ports command mentioned previously in this manual.

Restrictions

User Account Command Level – Administrator and Operator

Example usage:

To configure traffic control and enable broadcast storm control for ports 1-12:

```
DES-3800:admin# config traffic control 1-12 broadcast enable action
shutdown threshold 1 countdown 10 time_interval 10
```

```
Command: config traffic control 1-12 broadcast enable action shutdown
threshold 1 countdown 10 time_interval 10
```

Success.

```
DES-3800:admin#
```

**show traffic control**

Purpose	Used to display current traffic control settings.
Syntax	<b>show traffic control</b> {[all   <portlist>]}
Description	This command displays the current storm traffic control configuration on the Switch.
Parameters	<i>all</i> - Used to specify all ports for which to display traffic control settings. <i>&lt;portlist&gt;</i> - Used to specify port or list of ports for which to display traffic control settings. The beginning and end of the port list range are separated by a dash.
Restrictions	User Account Command Level – All

Example usage:

To display traffic control setting for ports 1-4:

DES-3800:admin#show traffic control 1-4

Command: show traffic control 1-4

Traffic Storm Control Trap: [Occurred]

Port	Broadcast / Threshold	Multicast / Threshold	DLF / Threshold	Action	Time Interval	Count down
-----	-----	-----	-----	-----	-----	-----
1	Disabled/128000	Disabled/128000	Disabled/128000	drop	5	0
2	Disabled/128000	Disabled/128000	Disabled/128000	drop	5	0
3	Disabled/128000	Disabled/128000	Disabled/128000	drop	5	0
4	Disabled/128000	Disabled/128000	Disabled/128000	drop	5	0

Total Entries: 5

DES-3800:admin#

**config traffic control\_trap**

Purpose	Used to configure the trap settings for the packet storm control mechanism.
Syntax	<b>config traffic control_trap</b> [none   storm_occurred   storm_cleared   both]
Description	This command will configure how packet storm control trap messages will be used when a packet storm is detected by the Switch. This function can only be used for the software traffic storm control mechanism (when the <b>action</b> field in the <b>config traffic storm_control</b> command is set as <b>shutdown</b> ).
Parameters	<i>none</i> – No notification will be generated or sent when a packet storm control is detected by the Switch. <i>storm_occurred</i> – A notification will be generated and sent when a packet storm has been detected by the Switch. <i>storm_cleared</i> – A notification will be generated and sent when a packet storm has been cleared by the Switch. <i>both</i> – A notification will be generated and sent when a packet storm has been detected and cleared by the Switch.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure notifications to be sent when a packet storm control has been detected and cleared by the Switch.

```
DES-3800:admin# config traffic control_trap both
```

```
Command: config traffic control_trap both
```

```
Success.
```

```
DES-3800:admin#
```

## QoS COMMANDS

The xStack DES-3800 Series supports 802.1p priority queuing. The Switch has 8 priority queues. These priority queues are numbered from 7 (Class 7) — the highest priority queue — to 0 (Class 0) — the lowest priority queue. The eight priority tags specified in IEEE 802.1p (p0 to p7) are mapped to the Switch's priority queues as follows:

- Priority 0 is assigned to the Switch's Q2 queue.
- Priority 1 is assigned to the Switch's Q0 queue.
- Priority 2 is assigned to the Switch's Q1 queue.
- Priority 3 is assigned to the Switch's Q3 queue.
- Priority 4 is assigned to the Switch's Q4 queue.
- Priority 5 is assigned to the Switch's Q5 queue.
- Priority 6 is assigned to the Switch's Q6 queue.
- Priority 7 is assigned to the Switch's Q7 queue.

Priority scheduling is implemented by the priority queues stated above. The Switch will empty the eight hardware priority queues in order, beginning with the highest priority queue, 7, to the lowest priority queue, 0. Each hardware queue will transmit all of the packets in its buffer before permitting the next lower priority to transmit its packets. When the lowest hardware priority queue has finished transmitting all of its packets, the highest hardware priority queue will begin transmitting any packets it may have received.

### WRED Settings

WRED or Weighted Random Early Discard is another implementation for QoS that will help the overall throughput for your QoS queues. Based on the egress queue of the QoS function set on the Switch, this method will analyze these packets and their QoS queue to determine if there will be an overflow of packets entering the QoS queues and consequentially, minimize the packet flow into these queues by dropping random packets. WRED employs two methods of avoiding congestion within the QoS queue.

1. Every QoS queue has a minimum and a maximum level for acceptance of packets. Once the maximum threshold has been reached for this queue, the Switch will begin discarding all ingress packets, this minimizing the allotted bandwidth for QoS. When below the minimum threshold, the switch will accept all ingress packets.
2. When the ingress packets are somewhere between the maximum and minimum queue, the Switch will use a slope probability function to determine a random method of dropping packets based on the fill percentage of the QoS queue. If queues are closer to being full, the Switch will increase the discarding of random packets to even out the flow to the queues and avoid overflows to higher priority queues.

The commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config bandwidth_control	<portlist> {rx_rate [no_limit   <value 64-1000000>]   tx_rate [no_limit   <value 64-1000000>]}
show bandwidth_control	{<portlist>}
config scheduling	<class_id 0-7> {max_packet <value 0-15>}
show scheduling	
config 802.1p user_priority	<priority 0-7> <class_id 0-7>
show 802.1p user_priority	
config 802.1p default_priority	[<portlist>   all] <priority 0-7>
show 802.1p default_priority	{<portlist>}
config scheduling_mechanism	[strict   weight_robin]
show scheduling_mechanism	
enable wred	
disable wred	

Command	Parameters
config wred ports	[<portlist>   all] [class_id <class_id 0-7> {drop_start <int 0-100>  drop_slope <int 0-90>}   {drop_start <int 0-100>   drop_slope <int 0-90>   average_time <int 1-32768>}]
show wred	{ports [<portlist>   all]}

Each command is listed, in detail, in the following sections.

<b>config bandwidth_control</b>	
Purpose	Used to configure bandwidth control on a port by-port basis.
Syntax	<b>&lt;portlist&gt; {rx_rate [no_limit   &lt;value 64-1000000&gt;]   tx_rate [no_limit   &lt;value 64-1000000&gt;]}</b>
Description	The <b>config bandwidth_control</b> command is used to configure bandwidth on a port by-port basis.
Parameters	<p><b>&lt;portlist&gt;</b> – Specifies a port or range of ports to be configured.</p> <p><b>rx_rate</b> – Specifies that one of the parameters below (<i>no_limit</i> or <i>&lt;value 64-1000000&gt;</i>) will be applied to the rate at which the above specified ports will be allowed to receive packets</p> <ul style="list-style-type: none"> <li><i>no_limit</i> – Specifies that there will be no limit on the rate of packets received by the above specified ports.</li> <li><i>&lt;value 64-1000000&gt;</i> – Specifies the packet limit, in Kbps, that the above ports will be allowed to receive.</li> </ul> <p><b>tx_rate</b> – Specifies that one of the parameters below (<i>no_limit</i> or <i>&lt;value 1-1000&gt;</i>) will be applied to the rate at which the above specified ports will be allowed to transmit packets.</p> <ul style="list-style-type: none"> <li><i>no_limit</i> – Specifies that there will be no limit on the rate of packets received by the above specified ports.</li> <li><i>&lt;value 64-1000000&gt;</i> – Specifies the packet limit, in Kbps, that the above ports will be allowed to receive.</li> </ul> <p>The transfer (tx) and receive (rx) rate of packets for all ports must be configured in a multiple of 64 Kbits. (64, 128, 192...)</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure bandwidth control:

```
DES-3800:admin#config bandwidth_control 1-8 rx_rate 64 tx_rate 64
Command: config bandwidth_control 1-8 rx_rate 64 tx_rate 64

Success.

DES-3800:admin#
```

<b>show bandwidth_control</b>	
Purpose	Used to display the bandwidth control table.
Syntax	<b>show bandwidth_control {&lt;portlist&gt;}</b>
Description	The <b>show bandwidth_control</b> command displays the current bandwidth control configuration on the Switch, on a port-by-port basis.
Parameters	<b>&lt;portlist&gt;</b> – Specifies a port or range of ports to be viewed.
Restrictions	User Account Command Level – All

Example usage:

To display bandwidth control settings:

```
DES-3800:admin#show bandwidth_control 1-10
Command: show bandwidth_control 1-10
```

#### Bandwidth Control Table

Port	RX Rate (Mbit/sec)	TX_RATE (Mbit/sec)
1	no_limit	no_limit
2	no_limit	no_limit
3	no_limit	no_limit
4	no_limit	no_limit
5	no_limit	no_limit
6	no_limit	no_limit
7	no_limit	no_limit
8	no_limit	no_limit
9	no_limit	no_limit
10	no_limit	no_limit

```
DES-3800:admin#
```

## config scheduling

Purpose	Used to configure the traffic scheduling mechanism for each COS queue.
Syntax	<b>config scheduling &lt;class_id 0-7&gt; {max_packet &lt;value 0-15&gt;}</b>
Description	<p>The Switch contains 8 hardware priority queues. Incoming packets must be mapped to one of these four queues. This command is used to specify the rotation by which these eight hardware priority queues are emptied. The Switch's default (if the <b>config scheduling</b> command is not used, or if the config scheduling command is entered with the max_packet set to 0) is to empty the hardware priority queues in order – from the highest priority queue (hardware queue 7) to the lowest priority queue (hardware queue 0). Each hardware queue will transmit all of the packets in its buffer before allowing the next lower priority queue to transmit its packets. When the lowest hardware priority queue has finished transmitting all of its packets, the highest hardware priority queue can again transmit any packets it may have received.</p> <p>The <i>max_packets</i> parameter allows you to specify the maximum number of packets a given hardware priority queue can transmit before allowing the next lowest hardware priority queue to begin transmitting its packets. A value between 0 and 15 can be specified. For example, if a value of 3 is specified, then the highest hardware priority queue (number 7) will be allowed to transmit 3 packets – then the next lowest hardware priority queue (number 6) will be allowed to transmit 3 packets, and so on, until all of the queues have transmitted 3 packets. The process will then repeat.</p>
Parameters	<p><b>&lt;class_id 0-7&gt;</b> – This specifies to which of the eight hardware priority queues the <i>config scheduling</i> command will apply. The eight hardware priority queues are identified by number, from 0 to 7, with the 0 queue being the lowest priority.</p> <p><b>max_packet &lt;value 0-15&gt;</b> – Specifies the maximum number of packets the above specified hardware priority queue will be allowed to transmit before allowing the next lowest priority queue to transmit its packets. A value between 0 and 15 can be specified.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure the traffic scheduling mechanism for each queue:

```
DES-3800:admin# config scheduling 0 max_packet 12
Command: config scheduling 0 max_packet 12

Success.

DES-3800:admin#
```

## show scheduling

Purpose	Used to display the currently configured traffic scheduling on the Switch.
Syntax	<b>show scheduling</b>
Description	The <b>show scheduling</b> command will display the current traffic scheduling mechanisms in use on the Switch.
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To display the current scheduling configuration:

```
DES-3800:admin#show scheduling

## config 802.1p user\_priority

Purpose	Used to map the 802.1p user priority of an incoming packet to one of the four hardware queues available on the Switch.														
Syntax	<b>config 802.1p user_priority &lt;priority 0-7&gt; &lt;class_id 0-7&gt;</b>														
Description	<p>This command allows users to configure the way the Switch will map an incoming packet, based on its 802.1p user priority, to one of the eight available hardware priority queues on the Switch.</p> <p>The Switch's default is to map the following incoming 802.1p user priority values to the eight hardware priority queues:</p> <table><tr><th>802.1p</th><th>Hardware Queue</th><th>Remark</th></tr><tr><td>0</td><td>2</td><td>Mid-low</td></tr><tr><td>1</td><td>0</td><td>Lowest</td></tr><tr><td>2</td><td>1</td><td>Lowest</td></tr></table>			802.1p	Hardware Queue	Remark	0	2	Mid-low	1	0	Lowest	2	1	Lowest
802.1p	Hardware Queue	Remark													
0	2	Mid-low													
1	0	Lowest													
2	1	Lowest													

**config 802.1p user\_priority**

3	3	Mid-low
4	4	Mid-high
5	5	Mid-high
6	6	Highest
7	7	Highest.

This mapping scheme is based upon recommendations contained in IEEE 802.1D.

Change this mapping by specifying the 802.1p user priority to go to the `<class_id 0-7>` (the number of the hardware queue).

`<priority 0-7>` – The 802.1p user priority to associate with the `<class_id 0-7>` (the number of the hardware queue).

`<class_id 0-7>` – The number of the Switch's hardware priority queue. The Switch has eight hardware priority queues available. They are numbered between 0 (the lowest priority) and 7 (the highest priority).

Restrictions      User Account Command Level – Administrator and Operator

Example usage:

To configure 802.1p user priority on the Switch:

```
DES-3800:admin# config 802.1p user_priority 1 7
Command: config 802.1p user_priority 1 7
```

Success.

```
DES-3800:admin#
```

**show 802.1p user\_priority**

Purpose	Used to display the current mapping between an incoming packet's 802.1p priority value and one of the Switch's eight hardware priority queues.
Syntax	<b>show 802.1p user_priority</b>
Description	The <b>show 802.1p user_priority</b> command displays the current mapping of an incoming packet's 802.1p priority value to one of the Switch's eight hardware priority queues.
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To show 802.1p user priority:

```
DES-3800:admin#show 802.1p user_priority
Command: show 802.1p user_priority
```

**QOS Class of Traffic**

```
Priority-0 -> <Class-2>
Priority-1 -> <Class-0>
Priority-2 -> <Class-1>
Priority-3 -> <Class-3>
Priority-4 -> <Class-4>
Priority-5 -> <Class-5>
```

```
Priority-6 -> <Class-6>
Priority-7 -> <Class-7>

DES-3800:admin#
```

## config 802.1p default\_priority

Purpose	Used to configure the 802.1p default priority settings on the Switch. If an untagged packet is received by the Switch, the priority configured with this command will be written to the packet's priority field.
Syntax	<b>config 802.1p default_priority [&lt;portlist&gt;   all] &lt;priority 0-7&gt;</b>
Description	This command allows you to specify default priority handling of untagged packets received by the Switch. The priority value entered with this command will be used to determine to which of the eight hardware priority queues the packet is forwarded.
Parameters	<p><i>&lt;portlist&gt;</i> – Specifies a port or range of ports to be configured.</p> <p><i>all</i> – Specifies that the command applies to all ports on the Switch.</p> <p><i>&lt;priority 0-7&gt;</i> – The priority value to assign to untagged packets received by the Switch or a range of ports on the Switch.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure 802.1p default priority on the Switch:

```
DES-3800:admin#config 802.1p default_priority all 5
Command: config 802.1p default_priority all 5

Success.

DES-3800:admin#
```

## show 802.1p default\_priority

Purpose	Used to display the currently configured 802.1p priority value that will be assigned to an incoming, untagged packet before being forwarded to its destination.
Syntax	<b>show 802.1p default_priority {&lt;portlist&gt;}</b>
Description	The <b>show 802.1p default_priority</b> command displays the currently configured 802.1p priority value that will be assigned to an incoming, untagged packet before being forwarded to its destination.
Parameters	<i>&lt;portlist&gt;</i> – Specifies a port or range of ports for which to display the default-priority.
Restrictions	User Account Command Level – All

Example usage:

To display the current 802.1p default priority configuration on the Switch:

```
DES-3800:admin# show 802.1p default_priority
Command: show 802.1p default_priority
```

Port	Priority

```
DES-3800:admin#
```

## config scheduling\_mechanism

Purpose	Used to configure the scheduling mechanism for the QoS function
Syntax	<b>config scheduling_mechanism [strict   weight_robin]</b>
Description	<p>The <b>config scheduling_mechanism</b> command allows the user to select between a <b>weight robin (WRR)</b> and a <b>Strict</b> mechanism for emptying the priority classes of service of the QoS function. The Switch contains eight hardware priority classes of service. Incoming packets must be mapped to one of these eight hardware priority classes of service. This command is used to specify the rotation by which these eight hardware priority classes of service are emptied.</p> <p>The Switch's default is to empty the eight priority classes of service in order – from the highest priority class of service (queue 7) to the lowest priority class of service (queue 0). Each queue will transmit all of the packets in its buffer before allowing the next lower priority class of service to transmit its packets. Lower classes of service will be pre-empted from emptying its queue if a packet is received on a higher class of service. The packet that was received on the higher class of service will transmit its packet before allowing the lower class to resume clearing its queue.</p>
Parameters	<p><b>strict</b> – Entering the <b>strict</b> parameter indicates that the highest class of service is the first to be processed. That is, the highest class of service should finish emptying before the others begin.</p> <p><b>weight_robin</b> – Entering the weight fair parameter indicates that the priority classes of service will empty packets in a weighted round-robin (<b>WRR</b>) order. That is to say that they will be emptied in an even distribution.</p>

## config scheduling\_mechanism

Restrictions User Account Command Level – Administrator and Operator

Example usage:

To configure the traffic scheduling mechanism for each COS queue:

```
DES-3800:admin#config scheduling_mechanism strict
Command: config scheduling_mechanism strict

Success.

DES-3800:admin#
```

## show scheduling\_mechanism

Purpose	Used to display the current traffic scheduling mechanisms in use on the Switch.
Syntax	<b>show scheduling_mechanism</b>
Description	This command will display the current traffic scheduling mechanisms in use on the Switch.
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To show the scheduling mechanism:

```
DES-3800:admin#show scheduling_mechanism
Command: show scheduling_mechanism

QOS scheduling_mechanism
CLASS ID Mechanism
-----
Class-0 strict
Class-1 strict
Class-2 strict
Class-3 strict
Class-4 strict
Class-5 strict
Class-6 strict
Class-6 strict

DES-3800:admin#
```

## enable wred

Purpose	Used to enable WRED on the Switch.
Syntax	<b>enable wred</b>
Description	This command, along with the <b>disable wred</b> command will enable and disable the Weighted Random Early Discard (WRED) mechanism on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable WRED switch wide.

```
DES-3800:admin#enable wred
Command: enable wred

Success.

DES-3800:admin#
```

## disable wred

Purpose	Used to disable WRED on the Switch.
Syntax	<b>disable wred</b>
Description	This command, along with the <b>enable wred</b> command will enable and disable the Weighted Random Early Discard (WRED) mechanism on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable WRED switch wide.

```
DES-3800:admin#disable wred
Command: disable wred

Success.

DES-3800:admin#
```

## config wred ports

Purpose	Used to configure the WRED settings on the Switch.
Syntax	<b>config wred ports [&lt;portlist&gt;   all] [class_id &lt;class_id 0-7&gt; {drop_start &lt;int 0-100&gt;   drop_slope &lt;int 0-90&gt;}   {drop_start &lt;int 0-100&gt;   drop_slope &lt;int 0-90&gt;   average_time &lt;int 1-32768&gt;}]</b>
Description	This command is used to configure the Weighted Random Early Discard (WRED) parameters on the Switch, on a port by port basis, including the drop start point, drop slope and the average time checking interval.
Parameters	<p><b>&lt;portlist&gt;</b> - Specify a port or group of ports for which to configure WRED settings. A list of ports are configured by entering the first and last port of the list, separated by a dash. Multiple separate ports may be entered by separating them with a comma.</p> <p><b>class_id &lt;class_id 0-7&gt;</b> - Specifies the hardware priority queues to be configured for WRED. If no class ID is chosen, all class IDs will be configured for WRED.</p> <p><b>drop start &lt;int 0-100&gt;</b> - Select a percentage between 0 and 100 to initialize the discarding of random packets. This percentage is based on the fill percentage of the QoS queue stated in the Class ID field. (Once the specified queue reaches the target percentage specified here, the Switch will begin randomly discarding packets). Entering a 0 percentage will drop all incoming packets.</p>

**config wred ports**

*drop\_slope* <int 0-90> - Specifies the angle of the drop slope for drop probability of incoming packets. The angle 0 would disable the WRED drop probability for the specified hardware queue.

*average\_time* <int 1-32768>] - Enter a time, in microseconds, that the Switch will check the CoS queues to determine abnormalities in the settings and boundaries which will trigger the WRED function to initialize. This parameter can only be specified and implemented for ports in the portlist and NOT by individual class.

Restrictions      User Account Command Level – Administrator and Operator

Example usage:

To config the WRED function parameters for port 2 and class ID 2, with a drop start of 50% and a drop slope of 45°:

```
DES-3800:admin#config wred ports 2 class_id 2 drop_start 50 drop_slope 45
Command: config wred ports 2 class_id 2 drop_start 50 drop_slope 45

Success.

DES-3800:admin#
```

Example usage:

To config the WRED function parameters for port 2 and all class IDs, with a drop start of 50% and a drop slope of 45° and average time of 100 microseconds:

```
DES-3800:admin#config wred ports 2 drop_start 50 drop_slope 45 average_time 100
Command: config wred ports 2 drop_start 50 drop_slope 45 average_time 100

Success.

DES-3800:admin#
```

**show wred**

Purpose	Used to disable WRED on the Switch.
Syntax	<b>show wred {ports [&lt;portlist&gt;   all]}</b>
Description	This command will display the configured parameters for the WRED settings on the Switch.
Parameters	<p><i>ports</i> &lt;portlist&gt; - Specify a port or group of ports for which to display WRED settings. A list of ports are configured by entering the first and last port of the list, separated by a dash. Multiple separate ports may be entered by separating them with a comma.</p> <p><i>all</i> – Specifying this parameter will display the WRED settings for all ports on the Switch.</p>
Restrictions	User Account Command Level – All

Example usage:

To display the WRED parameters set on the Switch.

**DES-3800:admin#show wred ports 1**

**Command: show wred ports 1**

**Global WRED : Disabled**

**Port : 1**

**Average time : 100 (us)**

**Class\_ID Drop Start Drop Slope**

<b>-----</b>	<b>-----</b>	<b>-----</b>
<b>0</b>	<b>50</b>	<b>45</b>
<b>1</b>	<b>50</b>	<b>45</b>
<b>2</b>	<b>50</b>	<b>45</b>
<b>3</b>	<b>50</b>	<b>45</b>
<b>4</b>	<b>50</b>	<b>45</b>
<b>5</b>	<b>50</b>	<b>45</b>
<b>6</b>	<b>50</b>	<b>45</b>
<b>7</b>	<b>50</b>	<b>45</b>

**DES-3800:admin#**

## PORT MIRRORING COMMANDS

The port mirroring commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config mirror port	<port> [add   delete] source ports <portlist> [rx   tx   both]
enable mirror	
disable mirror	
show mirror	

Each command is listed, in detail, in the following sections.

config mirror port	
Purpose	Used to configure a mirror port – source port pair on the Switch. Traffic from any source port to a target port can be mirrored for real-time analysis. A logic analyzer or an RMON probe can then be attached to study the traffic crossing the source port in a completely obtrusive manner.
Syntax	<b>config mirror port &lt;port&gt; [add   delete] source ports &lt;portlist&gt; [rx   tx   both]</b>
Description	This command allows a range of ports to have all of their traffic also sent to a designated port, where a network sniffer or other device can monitor the network traffic. In addition, you can specify that only traffic received by or sent by one or both is mirrored to the Target port.
Parameters	<p><b>&lt;port&gt;</b> – This specifies the Target port (the port where mirrored packets will be received). The target port must be configured in the same VLAN and must be operating at the same speed as the source port. If the target port is operating at a lower speed, the source port will be forced to drop its operating speed to match that of the target port.</p> <p><b>[add   delete]</b> – Specify to add or delete ports to be mirrored that are specified in the <i>source ports</i> parameter.</p> <p><b>source ports</b> – The port or ports being mirrored. This cannot include the Target port.</p> <ul style="list-style-type: none"> <li><b>&lt;portlist&gt;</b> – This specifies a port or range of ports that will be mirrored. That is, the range of ports in which all traffic will be copied and sent to the Target port.</li> </ul> <p><b>rx</b> – Allows the mirroring of only packets received by (flowing into) the port or ports in the port list.</p> <p><b>tx</b> – Allows the mirroring of only packets sent to (flowing out of) the port or ports in the port list.</p> <p><b>both</b> – Mirrors all the packets received or sent by the port or ports in the port list.</p>
Restrictions	User Account Command Level – Administrator and Operator. The Target port cannot be listed as a source port.

Example usage:

To add the mirroring ports:

```
DES-3800:admin# config mirror port 1 add source ports 2-7 both
Command: config mirror port 1 add source ports 2-7 both

Success.

DES-3800:admin#
```

Example usage:

To delete the mirroring ports:

```
DES-3800:admin#config mirror port 1 delete source port 2-4
Command: config mirror 1 delete source 2-4

Success.

DES-3800:admin#
```

## enable mirror

Purpose	Used to enable a previously entered port mirroring configuration.
Syntax	<b>enable mirror</b>
Description	This command, combined with the <b>disable mirror</b> command below, allows you to enter a port mirroring configuration into the Switch, and then turn the port mirroring on and off without having to modify the port mirroring configuration.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable mirroring configurations:

```
DES-3800:admin#enable mirror
Command: enable mirror

Success.

DES-3800:admin#
```

## disable mirror

Purpose	Used to disable a previously entered port mirroring configuration.
Syntax	<b>disable mirror</b>
Description	This command, combined with the <b>enable mirror</b> command above, allows you to enter a port mirroring configuration into the Switch, and then turn the port mirroring on and off without having to modify the port mirroring configuration.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable mirroring configurations:

```
DES-3800:admin#disable mirror
Command: disable mirror

Success.

DES-3800:admin#
```

## show mirror

Purpose	Used to show the current port mirroring configuration on the Switch.
Syntax	<b>show mirror</b>
Description	This command displays the current port mirroring configuration on the Switch.
Parameters	None
Restrictions	User Account Command Level – All

Example usage:

To display mirroring configuration:

```
DES-3800:admin#show mirror
Command: show mirror

Current Settings
Mirror Status : Enabled
Target Port   : 1
Mirrored Port :
    RX :
    TX : 5-7

DES-3800:admin#
```

## VLAN COMMANDS (INCLUDING DOUBLE VLANs)

Along with normal VLAN configurations, this Switch now incorporate Double VLANs. Better known as Q-IN-Q VLANs, Double VLANs allow network providers to expand their VLAN configurations to place VLANs within a larger inclusive VLAN, which adds a new layer to the VLAN configuration. This basically lets large ISP's create L2 Virtual Private Networks and also create transparent LANs for their customers, which will connect two or more customer LAN points without over complicating configurations on the client's side. Not only will over-complication be avoided, but now the administrator has over 4000 VLANs in which over 4000 VLANs can be placed, therefore greatly expanding the VLAN network.

Implementation of this feature adds a VLAN frame to an existing VLAN frame for the ISP VLAN recognition and classification. To ensure devices notice this added VLAN frame, an Ethernet encapsulation, here known as a tpid, is also added to the frame. The device recognizes this tpid and therefore checks the VLAN tagged packet to see if a provider VLAN tag has been added. If so, the packet is then routed through this provider VLAN, which contains smaller VLANs with similar configurations to ensure speedy and guaranteed routing destination of the packet.

The VLAN commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create vlan	<vlan_name 32> {tag <vlanid 1-4094>   advertisement}
delete vlan	<vlan_name 32>
config vlan	<vlan_name 32> {[add [tagged   untagged   forbidden]   delete] <portlist>   advertisement [enable   disable]}
config gvrp	[<portlist>   all] {state [enable   disable]   ingress_checking [enable   disable]   acceptable_frame [tagged_only   admit_all]   pvid <vlanid 1-4094>}
enable gvrp	
disable gvrp	
show vlan	{<vlan_name 32>}
show gvrp	{<portlist>}
enable double_vlan	
disable double_vlan	
create double_vlan	<vlan_name 32> spvid <vlanid 1-4094> {tpid <hex 0x0-0xffff>}
config double_vlan	<vlan_name> {[add [uplink   access]   delete] <portlist>   tpid <hex 0x0-0xffff>}
delete double_vlan	<vlan_name>
show double_vlan	{<vlan_name>}

Each command is listed, in detail, in the following sections.

### create vlan

Purpose	Used to create a VLAN on the Switch.
Syntax	<b>create vlan &lt;vlan_name 32&gt; {tag &lt;vlanid 1-4094&gt;   advertisement}</b>
Description	This command allows the creation of a VLAN on the Switch.
Parameters	<p>&lt;vlan_name 32&gt; – The name of the VLAN to be created.</p> <p>&lt;vlanid 1-4094&gt; – The VLAN ID of the VLAN to be created. Allowed values = 1-4094</p> <p>advertisement – Specifies that the VLAN is able to join GVRP. If</p>

## create vlan

	this parameter is not set, the VLAN cannot be configured to have forbidden ports.
Restrictions	User Account Command Level – Administrator and Operator Each VLAN name can be up to 32 characters. If the VLAN is not given a tag, it will be a port-based VLAN. Up to 255 static VLANs may be created per configuration.

Example usage:

To create a VLAN v1, tag 2:

```
DES-3800:admin#create vlan v1 tag 2
Command: create vlan v1 tag 2

Success.

DES-3800:admin#
```

## delete vlan

Purpose	Used to delete a previously configured VLAN on the Switch.
Syntax	<b>delete vlan &lt;vlan_name 32&gt;</b>
Description	This command will delete a previously configured VLAN on the Switch.
Parameters	<vlan_name 32> – The VLAN name of the VLAN to delete.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To remove the VLAN “v1”:

```
DES-3800:admin#delete vlan v1
Command: delete vlan v1

Success.

DES-3800:admin#
```

## config vlan

Purpose	Used to add additional ports to a previously configured VLAN.
Syntax	<b>config vlan &lt;vlan_name 32&gt; {[add [tagged   untagged   forbidden]   delete] &lt;portlist&gt;   advertisement [enable   disable]}</b>
Description	This command is used to add ports to the port list of a previously configured VLAN. The additional ports can be specified as tagging, untagging, or forbidden. The default is to assign the ports as untagging.
Parameters	<vlan_name 32> – The name of the VLAN to which to add ports. add – Entering the add parameter will add ports to the VLAN. There are three types of ports to add: <ul style="list-style-type: none"> <li>• <i>tagged</i> – Specifies the additional ports as tagged.</li> </ul>

## config vlan

- *untagged* – Specifies the additional ports as untagged.
- *forbidden* – Specifies the additional ports as forbidden

*delete* – Deletes ports from the specified VLAN.

*<portlist>* – A port or range of ports to add to, or delete from the specified VLAN.

*advertisement [enable | disable]* – Enables or disables GVRP on the specified VLAN.

Restrictions      User Account Command Level – Administrator and Operator

Example usage:

To add 4 through 8 as tagged ports to the VLAN v1:

```
DES-3800:admin#config vlan v1 add tagged 4-8
```

```
Command: config vlan v1 add tagged 4-8
```

```
Success.
```

```
DES-3800:admin#
```

To delete ports from a VLAN:

```
DES-3800:admin#config vlan v1 delete 6-8
```

```
Command: config vlan v1 delete 6-8
```

```
Success.
```

```
DES-3800:admin#
```

## config gvrp

Purpose      Used to configure GVRP on the Switch.

Syntax      **config gvrp [<portlist> | all] {state [enable | disable] | ingress\_checking [enable | disable] | acceptable\_frame [tagged\_only | admit\_all] | pvid <vlanid 1-4094>}**

Description      This command is used to configure the Group VLAN Registration Protocol on the Switch. You can configure ingress checking, the sending and receiving of GVRP information, and the Port VLAN ID (PVID).

Parameters      *<portlist>* – A port or range of ports for which you want to enable GVRP for.  
*all* – Specifies all of the ports on the Switch.  
*state [enable | disable]* – Enables or disables GVRP for the ports specified in the port list.  
*ingress\_checking [enable | disable]* – Enables or disables ingress checking for the specified port list.  
*acceptable\_frame [tagged\_only | admit\_all]* – This parameter states the frame type that will be accepted by the Switch for this function. *tagged\_only* implies that only VLAN tagged frames will be accepted, while *admit\_all* implies tagged and untagged frames will be accepted by the Switch.  
*pvid <vlanid 1-4094>* – Specifies the default VLAN associated with the port.

Restrictions      User Account Command Level – Administrator and Operator

Example usage:

To set the ingress checking status, the sending and receiving GVRP information :

```
DES-3800:admin#config gvrp 1-4 state enable ingress_checking enable
acceptable_frame tagged_only pvid 2
Command: config gvrp 1-4 state enable ingress_checking enable
acceptable_frame tagged_only pvid 2

Success.

DES-3800:admin#
```

## enable gvrp

Purpose	Used to enable GVRP on the Switch.
Syntax	<b>enable gvrp</b>
Description	This command, along with <b>disable gvrp</b> below, is used to enable and disable GVRP on the Switch, without changing the GVRP configuration on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable the generic VLAN Registration Protocol (GVRP):

```
DES-3800:admin#enable gvrp
Command: enable gvrp

Success.

DES-3800:admin#
```

## disable gvrp

Purpose	Used to disable GVRP on the Switch.
Syntax	<b>disable gvrp</b>
Description	This command, along with <b>enable gvrp</b> , is used to enable and disable GVRP on the Switch, without changing the GVRP configuration on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable the Generic VLAN Registration Protocol (GVRP):

```
DES-3800:admin#disable gvrp
Command: disable gvrp

Success.

DES-3800:admin#
```

**show vlan**

Purpose	Used to display the current VLAN configuration on the Switch
Syntax	<b>show vlan {&lt;vlan_name 32&gt;}</b>
Description	This command displays summary information about each VLAN including the VLAN ID, VLAN name, the Tagging/Untagging status, and the Member/Non-member/Forbidden status of each port that is a member of the VLAN.
Parameters	<vlan_name 32> – The VLAN name of the VLAN for which to display a summary of settings.
Restrictions	User Account Command Level – All

Example usage:

To display the Switch's current VLAN settings:

```
DES-3800:admin#show vlan
Command: show vlan

VID          : 1          VLAN Name    : default
VLAN TYPE    : static     Advertisement : Enabled
Member ports : 1,5-26
Static ports  : 1,5-26
Current Untagged ports : 1,5-26
Static Untagged ports : 1,5-26
Forbidden ports :

VID          : 4094       VLAN Name    : Trinity
VLAN TYPE    : static     Advertisement : Enabled
Member ports  : 2-4
Static ports  : 2-4
Current Untagged ports : 2-4
Static Untagged ports : 2-4
Forbidden ports :

Total Entries : 2

DES-3800:admin#
```

**show gvrp**

Purpose	Used to display the GVRP status for a port list on the Switch.
Syntax	<b>show gvrp {&lt;portlist&gt;}</b>
Description	This command displays the GVRP status for a port list on the Switch.
Parameters	<portlist> – Specifies a port or range of ports for which the GVRP status is to be displayed.
Restrictions	User Account Command Level – All

Example usage:

To display GVRP port status:

```
DES-3800:admin#show gvrp
Command: show gvrp
```

Global GVRP : Disabled

```

## enable double\_vlan

Purpose	Used to enable the Double VLAN feature on the Switch.
Syntax	<b>enable double_vlan</b>
Description	This command, along with the <b>disable double_vlan</b> command, enables and disables the Double Tag VLAN. When Double VLANs are enabled, the system configurations for VLANs will return to the default setting, in order to enable the Double VLAN mode. In the Double VLAN mode, normal VLANs and GVRP functions are disabled. The Double VLAN default setting is disabled.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable the Double VLAN feature on the Switch, thus disabling normal VLANs and GVRP.

```
DES-3800:admin#enable double_vlan
```

```
Command: enable double_vlan
```

```
Success.
```

```
DES-3800:admin#
```

## disable double\_vlan

Purpose	Used to disable the Double VLAN feature on the Switch.
Syntax	<b>disable double_vlan</b>
Description	This command, along with the <b>enable double_vlan</b> command, enables and disables the Double Tag VLAN. When Double VLANs are enabled, the system configurations for VLANs will return to the default setting, in order to enable the Double VLAN mode. In the Double VLAN mode, normal VLANs and GVRP functions are disabled. The Double VLAN default setting is disabled.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable the Double VLAN feature on the Switch

```
DES-3800:admin#disable double_vlan
```

```
Command: disable double_vlan
```

```
Success.
```

```
DES-3800:admin#
```

## create double\_vlan

Purpose	Used to create a Double VLAN on the Switch.
Syntax	<b>create double_vlan &lt;vlan_name 32&gt; spvid &lt;vlanid 1-4094&gt; {tpid &lt;hex 0x0-0xffff&gt;}</b>
Description	This command is used to create a Double VLAN (service provider VLAN) on the Switch.
Parameters	<p><i>vlan &lt;vlan_name 32&gt;</i> - The name of the Double VLAN to be created. The user is to enter an alphanumeric string of up to 32 characters to identify this VLAN.</p> <p><i>spvid &lt;vlanid 1-4094&gt;</i> - The VLAN ID of the service provider VLAN. The user is to identify this VLAN with a number between 1 and 4094.</p> <p><i>tpid &lt;hex 0x0-0xffff&gt;</i> - The tag protocol ID. This ID, identified here in hex form, will help identify packets to devices as Double VLAN tagged packets. The default setting is 0x8100.</p>
Restrictions	<p>User Account Command Level – Administrator and Operator</p> <p>Users must have the Switch enabled for Double VLANs.</p>

```
DES-3800:admin#create double_vlan Trinity spvid 6 tpid 0x9100
Command: create double_vlan Trinity spvid 6 tpid 0x9100
```

Success.

```
DES-3800:admin#
```

## config double\_vlan

Purpose	Used to config the parameters for a previously created Double VLAN on the Switch.
Syntax	<b>config double_vlan &lt;vlan_name&gt; {[add [uplink   access]   delete] &lt;portlist&gt;   tpid &lt;hex 0x0-0xffff&gt;}</b>
Description	This command is used to create a Double VLAN (service provider VLAN) on the Switch.
Parameters	<p><i>vlan &lt;vlan_name 32&gt;</i> - The name of the Double VLAN to be configured. The user is to enter an alphanumeric string of up to 32 characters to identify this VLAN.</p> <p><i>add</i> – Specify this parameter to add ports configured in the <i>&lt;portlist&gt;</i> as one of the two following types of ports.</p> <ul style="list-style-type: none"> <li><i>uplink</i> – Add this parameter to configure these ports as uplink ports. Uplink ports are for connecting Switch VLANs to the Provider VLANs on a remote source. Only gigabit ports can be configured as uplink ports.</li> <li><i>access</i> - Add this parameter to configure these ports as access ports. Access ports are for connecting Switch VLANs to customer VLANs. Gigabit ports can not be configured as access ports.</li> <li><i>portlist</i> – Enter a list of ports to be added to this VLAN. A list of ports are configured by entering the first and last port of the list, separated by a dash. Multiple separate ports may be entered by separating them with a comma.</li> </ul> <p><i>delete</i> - Specify this parameter to delete ports configured in the <i>&lt;portlist&gt;</i> from this VLAN.</p> <ul style="list-style-type: none"> <li><i>portlist</i> – Enter a list of ports to be deleted from this VLAN. A list of ports are configured by entering the first and last port of the list, separated by a dash. Multiple separate ports may be entered by separating them with a comma.</li> </ul> <p><i>tpid &lt;hex 0x0-0xffff&gt;</i>- The tag protocol ID. This ID, identified here in hex form, will help identify packets to devices as Double VLAN tagged packets. The default setting is 0x8100.</p>
Restrictions	User Account Command Level – Administrator and Operator Users must have the Switch enabled for Double VLANs.

Example usage:

To add ports 4 through 8 as access ports to the Double VLAN Trinity:

```
DES-3800:admin#config double_vlan Trinity add access 4-8
Command: config double_vlan Trinity add access 4-8
```

Success.

```
DES-3800:admin#
```

Example usage:

To delete ports 4 through 8 on the Double VLAN Trinity:

```
DES-3800:admin#config double_vlan Trinity delete 4-8
Command: config double_vlan Trinity delete 4-8

Success.

DES-3800:admin#
```

## show double\_vlan

Purpose	Used to display the Double VLAN settings on the Switch.
Syntax	<b>show double_vlan &lt;vlan_name&gt;</b>
Description	This command will display the current double VLAN parameters configured on the Switch.
Parameters	<i>vlan name</i> - Enter the name of a previously created VLAN for which to display the settings.
Restrictions	User Account Command Level – All Users must have the Switch enabled for Double VLANs.

Example usage:

To display parameters for the Double VLAN Trinity:

```
DES-3800:admin#show double_vlan Trinity
Command: show double_vlan Trinity

Global Double VLAN : Enabled
=====
SPVID       : 6
VLAN Name   : Trinity
TPID        : 0x9200
Uplink ports :
Access ports : 4-8
Unknow ports :

Total Entries : 1

DES-3800:admin#
```

## LINK AGGREGATION COMMANDS

The link aggregation commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create link_aggregation group_id	<value 1-32> {type [lacp   static]}
delete link_aggregation group_id	<value 1-32>
config link_aggregation group_id	<value1-32> {master_port <port>   ports <portlist> state [enable   disable]}
config link_aggregation algorithm	[mac_source   mac_destination   mac_source_dest   ip_source   ip_destination   ip_source_dest]
show link_aggregation	{group_id <value 1-32>   algorithm}
config lacp_port	<portlist> mode [active   passive]
show lacp_port	{<portlist>}

Each command is listed, in detail, in the following sections.

### create link\_aggregation

Purpose	Used to create a link aggregation group on the Switch.
Syntax	<b>create link_aggregation group_id &lt;value 1-32&gt; {type [lacp   static]}</b>
Description	This command will create a link aggregation group with a unique identifier.
Parameters	<p><b>&lt;value&gt;</b> – Specifies the group ID. The Switch allows up to 32 link aggregation groups to be configured. The group number identifies each of the groups.</p> <p><b>type</b> – Specify the type of link aggregation used for the group. If the type is not specified the default type is <i>static</i>.</p> <ul style="list-style-type: none"> <li><i>lacp</i> – This designates the port group as LACP compliant. LACP allows dynamic adjustment to the aggregated port group. LACP compliant ports may be further configured (see config lacp_ports). LACP compliant must be connected to LACP compliant devices.</li> <li><i>static</i> – This designates the aggregated port group as static. Static port groups can not be changed as easily as LACP compliant port groups since both linked devices must be manually configured if the configuration of the trunked group is changed. If static link aggregation is used, be sure that both ends of the connection are properly configured and that all ports have the same speed/duplex settings.</li> </ul>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To create a link aggregation group:

```
DES-3800:admin#create link_aggregation group_id 1
Command: create link_aggregation group_id 1

Success.

DES-3800:admin#
```

**delete link\_aggregation group\_id**

Purpose	Used to delete a previously configured link aggregation group.
Syntax	<b>delete link_aggregation group_id &lt;value 1-32&gt;</b>
Description	This command is used to delete a previously configured link aggregation group.
Parameters	<i>&lt;value 1-32&gt;</i> – Specifies the group ID. The Switch allows up to 6 link aggregation groups to be configured. The group number identifies each of the groups.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete link aggregation group:

```
DES-3800:admin#delete link_aggregation group_id 6
Command: delete link_aggregation group_id 6

Success.

DES-3800:admin#
```

**config link\_aggregation**

Purpose	Used to configure a previously created link aggregation group.
Syntax	<b>config link_aggregation group_id &lt;value 1-32&gt; {master_port &lt;port&gt;   ports &lt;portlist&gt;   state [enable   disable]}</b>
Description	This command allows you to configure a link aggregation group that was created with the <b>create link_aggregation</b> command above. The DES-3800 supports link aggregation cross box which specifies that link aggregation groups may be spread over multiple switches in the switching stack.
Parameters	<p><i>group_id &lt;value 32&gt;</i> – Specifies the group ID. The Switch allows up to 32 link aggregation groups to be configured. The group number identifies each of the groups.</p> <p><i>master_port &lt;port&gt;</i> – Master port ID. Specifies which port (by port number) of the link aggregation group will be the master port. All of the ports in a link aggregation group will share the port configuration with the master port.</p> <p><i>ports &lt;portlist&gt;</i> – Specifies a port or range of ports that will belong to the link aggregation group.</p> <p><i>state [enable   disable]</i> – Allows users to enable or disable the specified link aggregation group.</p>
Restrictions	User Account Command Level – Administrator and Operator Link aggregation groups may not overlap.

Example usage:

To define a load-sharing group of ports, group-id 1, master port 5 with group members ports 5-7 plus port 9:

```
DES-3800:admin#config link_aggregation group_id 1 master_port 1 ports 5-7, 9
Command: config link_aggregation group_id 1 master_port 1 ports 5-7, 9

Success.

DES-3800:admin#
```

## config link\_aggregation algorithm

Purpose	Used to configure the link aggregation algorithm.
Syntax	<b>config link_aggregation algorithm [mac_source   mac_destination   mac_source_dest   ip_source   ip_destination   ip_source_dest]</b>
Description	This command configures the part of the packet examined by the Switch when selecting the egress port for transmitting load-sharing data. This feature is only available using the address-based load-sharing algorithm.
Parameters	<p><i>mac_source</i> – Indicates that the Switch should examine the MAC source address.</p> <p><i>mac_destination</i> – Indicates that the Switch should examine the MAC destination address.</p> <p><i>mac_source_dest</i> – Indicates that the Switch should examine the MAC source and destination addresses</p> <p><i>ip_source</i> – Indicates that the Switch should examine the IP source address.</p> <p><i>ip_destination</i> – Indicates that the Switch should examine the IP destination address.</p> <p><i>ip_source_dest</i> – Indicates that the Switch should examine the IP source address and the destination address.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure link aggregation algorithm for mac-source-dest:

```
DES-3800:admin#config link_aggregation algorithm mac_source_dest
Command: config link_aggregation algorithm mac_source_dest

Success.

DES-3800:admin#
```

## show link\_aggregation

Purpose	Used to display the current link aggregation configuration on the Switch.
Syntax	<b>show link_aggregation {group_id &lt;value 1-32&gt;   algorithm}</b>
Description	This command will display the current link aggregation configuration of the Switch.
Parameters	<p><i>&lt;value 1-32&gt;</i> – Specifies the group ID. The Switch allows up to 32 link aggregation groups to be configured. The group number identifies each of the groups.</p> <p><i>algorithm</i> – Allows you to specify the display of link aggregation by the algorithm in use by that group.</p>
Restrictions	User Account Command Level – All

Example usage:

To display Link Aggregation configuration:

```

DES-3800:admin#show link_aggregation
Command: show link_aggregation

Link Aggregation Algorithm = MAC-source-dest

Group ID       : 1
Master Port    : 1
Member Port    : 5-10
Active Port    :
Status         : Disabled
Flooding Port  : 5

DES-3800:admin#

```

## config lacp\_ports

Purpose	Used to configure settings for LACP compliant ports.
Syntax	<b>config lacp_ports &lt;portlist&gt; mode [active   passive]</b>
Description	This command is used to configure ports that have been previously designated as LACP ports (see <b>create link_aggregation</b> ).
Parameters	<p><b>&lt;portlist&gt;</b> – Specifies a port or range of ports to be configured.</p> <p><b>mode</b> – Select the mode to determine if LACP ports will process LACP control frames.</p> <ul style="list-style-type: none"> <li><i>active</i> – Active LACP ports are capable of processing and sending LACP control frames. This allows LACP compliant devices to negotiate the aggregated link so the group may be changed dynamically as needs require. In order to utilize the ability to change an aggregated port group, that is, to add or subtract ports from the group, at least one of the participating devices must designate LACP ports as active. Both devices must support LACP.</li> <li><i>passive</i> – LACP ports that are designated as passive cannot process LACP control frames. In order to allow the linked port group to negotiate adjustments and make changes dynamically, at one end of the connection must have “active” LACP ports (see above).</li> </ul>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure LACP port mode settings:

```

DES-3800:admin#config lacp_port 1-12 mode active
Command: config lacp_port 1-12 mode active

Success.

DES-3800:admin#

```

**show lacp\_port**

Purpose	Used to display current LACP port mode settings.
Syntax	<b>show lacp_port {&lt;portlist&gt;}</b>
Description	This command will display the LACP mode settings as they are currently configured.
Parameters	<b>&lt;portlist&gt;</b> - Specifies a port or range of ports to be configured. If no parameter is specified, the system will display the current LACP status for all ports.
Restrictions	User Account Command Level – All

Example usage:

To display LACP port mode settings:

```
DES-3800:admin#show lacp_port 1-10
```

```
Command: show lacp_port 1-10
```

Port	Activity
------	----------

-----	-----
-------	-------

1	Active
---	--------

2	Active

8	Active
---	--------

9	Active
---	--------

10	Active
----	--------

```
DES-3800:admin#
```

## IP-MAC BINDING COMMANDS

The IP network layer uses a four-byte address. The Ethernet link layer uses a six-byte MAC address. Binding these two address types together allows the transmission of data between the layers. The primary purpose of IP-MAC binding is to restrict the access to a switch to a number of authorized users. Only the authorized client can access the Switch's port by checking the pair of IP-MAC addresses with the pre-configured database. If an unauthorized user tries to access an IP-MAC binding enabled port, the system will block the access by dropping its packet. The maximum number of IP-MAC binding entries is dependant on chip capability (e.g. the ARP table size) and storage size of the device. For the DES-3800 series, the maximum number of IP-MAC Binding entries is 512. The creation of authorized users can be manually configured by CLI or Web. The function is port-based, meaning a user can enable or disable the function on the individual port.

### ACL Mode

Due to some special cases that have arisen with the IP-MAC binding, this Switch has been equipped with a special ACL Mode for IP-MAC Binding, which should alleviate this problem for users. When enabled, the Switch will create two entries in the Access Profile Table. The entries may only be created if there are at least two Profile IDs available on the Switch. If not, when the ACL Mode is enabled, an error message will be prompted to the user. When the ACL Mode is enabled, the Switch will only accept packets from a created entry in the IP-MAC Binding Setting window. All others will be discarded.

To configure the ACL mode, the user must first create an IP-MAC binding using the **create address\_binding ip\_mac ipaddress** command and select the mode as *acl*. Then the user must enable the mode by entering the **enable address\_binding acl\_mode** command. If an IP-MAC binding entry is created and the user wishes to change it to an ACL mode entry, the user may use the **config address\_binding ip\_mac ipaddress** command and select the mode as *acl*.

**NOTE:** When configuring the ACL mode function of the IP-MAC binding function, please pay close attention to previously set ACL entries. Since the ACL mode entries will fill the first two available access profiles and access profile IDs denote the ACL priority, the ACL mode entries may take precedence over other configured ACL entries. This may render some user-defined ACL parameters inoperable due to the overlapping of settings combined with the ACL entry priority (defined by profile ID). For more information on ACL settings, please see "Configuring the Access Profile" section mentioned previously in this chapter.

**NOTE:** Once ACL profiles have been created by the Switch through the IP-MAC binding function, the user cannot modify, delete or add ACL rules to these ACL mode access profile entries. Any attempt to modify, delete or add ACL rules will result in a configuration error as seen in the previous figure.

**NOTE:** When downloading configuration files to the Switch, be aware of the ACL configurations loaded, as compared to the ACL mode access profile entries set by this function, which may cause both access profile types to experience problems.

The IP-MAC Binding commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create address_binding ip_mac ipaddress	<ipaddr> mac_address <macaddr> {ports [<portlist>   all]   mode {arp   acl}}
config address_binding ip_mac ipaddress	<ipaddr> mac_address <macaddr> {ports [<portlist>   all]   mode {arp   acl}}
config address_binding ip_mac ports	[<portlist>   all] state [enable   disable]
show address_binding	[ip_mac {[all   ipaddress <ipaddr> mac_address <macaddr>]}   blocked {[all   vlan_name <vlan_name> mac_address <macaddr>]}   ports]
delete address_binding	[ip-mac [ipaddress <ipaddr> mac_address <macaddr> [all]   blocked [all   vlan_name <vlan_name> mac_address <macaddr>]]
enable address_binding acl_mode	
disable address_binding acl_mode	
enable address_binding trap_log	
disable address_binding trap_log	

Each command is listed, in detail, in the following sections.

create address_binding ip_mac ipaddress	
Purpose	Used to create an IP-MAC Binding entry.
Syntax	<b>&lt;ipaddr&gt; mac_address &lt;macaddr&gt; {ports [&lt;portlist&gt;   all]   mode {arp   acl}}</b>
Description	This command will create an IP-MAC Binding entry.
Parameters	<p><i>&lt;ipaddr&gt;</i> The IP address of the device where the IP-MAC binding is made.</p> <p><i>&lt;macaddr&gt;</i> The MAC address of the device where the IP-MAC binding is made.</p> <p><i>&lt;portlist&gt;</i> - Specifies a port or range of ports to be configured for address binding.</p> <p><i>all</i> – Specifies that all ports on the switch will be configured for address binding.</p> <p><i>mode</i> – The user may set the mode for this IP-MAC binding settings by choosing one of the following:</p> <ul style="list-style-type: none"> <li><i>arp</i> - Choosing this selection will set a normal IP-MAC Binding entry for the IP address and MAC address entered.</li> <li><i>acl</i> - Choosing this entry will allow only packets from the source IP-MAC binding entry created here. All other packets with a different IP address will be discarded by the Switch. This mode can only be used if the ACL Mode has been enabled in the IP-MAC Binding Ports window as seen previously.</li> </ul>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To create address binding on the Switch:

```
DES-3800:admin#create address_binding ip_mac ipaddress 10.1.1.3
mac_address 00-00-00-00-00-04
Command: create address_binding ip_mac ipaddress 10.1.1.3
mac_address 00-00-00-00-00-04
```

Success.

```
DES-3800:admin#
```

To create address binding on the Switch for ACL mode:

```
DES-3800:admin#create address_binding ip_mac ipaddress 10.1.1.3
mac_address 00-00-00-00-00-04 mode acl
Command: create address_binding ip_mac ipaddress 10.1.1.3 mac_address
00-00-00-00-00-04 mode acl
```

Success.

```
DES-3800:admin#
```

Once the ACL mode has been created and enabled (without previously created access profiles), the access profile table will look like this:

```
DES-3800:admin#show access_profile
Command: show access_profile
```

#### Access Profile Table

##### Access Profile ID : 1

Type : Packet Content Filter

Owner : Address\_binding

Masks :

Offset 0-15	: 0x00000000	0000ffff	ffffff	00000000

Offset 64-79	: 0x00000000	00000000	00000000	00000000

**CTRL+C** **ESC** **q** Quit **SPACE** **n** Next Page **Enter** Next Entry **a** All

The **show access\_profile** command will display the two access profiles created and their corresponding rules for every port on the Switch.

**config address\_binding ip\_mac ipaddress**

Purpose	Used to configure an IP-MAC Binding entry.
Syntax	<b>&lt;ipaddr&gt; mac_address &lt;macaddr&gt; {ports [&lt;portlist&gt;   all]   mode {arp   acl}}</b>
Description	This command will configure an IP-MAC Binding entry.
Parameters	<p><b>&lt;ipaddr&gt;</b> - The IP address of the device where the IP-MAC binding is made.</p> <p><b>&lt;macaddr&gt;</b> - The MAC address of the device where the IP-MAC binding is made.</p> <p><b>&lt;portlist&gt;</b> - Specifies a port or range of ports to be configured for address binding.</p> <p><b>all</b> – Specifies that all ports on the switch will be configured for address binding.</p> <p><b>mode</b> – The user may set the mode for this IP-MAC binding settings by choosing one of the following:</p> <ul style="list-style-type: none"> <li><b>arp</b> - Choosing this selection will set a normal IP-MAC Binding entry for the IP address and MAC address entered.</li> <li><b>acl</b> - Choosing this entry will allow only packets from the source IP-MAC binding entry created here. All other packets with a different IP address will be discarded by the Switch. This mode can only be used if the ACL Mode has been enabled in the IP-MAC Binding Ports window as seen previously.</li> </ul>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure address binding on the Switch:

```
DES-3800:admin#config address_binding ip_mac ipaddress 10.1.1.3
mac_address 00-00-00-00-00-05
Command: config address_binding ip_mac ipaddress 10.1.1.3 mac_address
00-00-00-00-00-05

Success.

DES-3800:admin#
```

To configure address binding on the Switch for ACL mode:

```
DES-3800:admin#config address_binding ip_mac ipaddress 10.1.1.3
mac_address 00-00-00-00-00-05 mode acl
Command: config address_binding ip_mac ipaddress 10.1.1.3 mac_address
00-00-00-00-00-05 mode acl

Success.

DES-3800:admin#
```

**config address\_binding ip\_mac ports**

Purpose	Used to configure an IP-MAC state to enable or disable for specified ports.
Syntax	<b>[&lt;portlist&gt;   all] state [enable   disable]</b>
Description	This command will configure IP-MAC state to enable or disable for specified ports.
Parameters	<b>&lt;portlist&gt;</b> – Specifies a port or range of ports.

**config address\_binding ip\_mac ports***all* – specifies all ports on the switch.*state [enable | disable]* – Enables or disables the specified range of ports.

Restrictions      User Account Command Level – Administrator and Operator

Example usage:

To configure address binding on the Switch:

**DES-3800:admin#config address\_binding ip\_mac ports 2 state enable****Command: config address\_binding ip\_mac ports 2 state enable****Success.****DES-3800:admin#****show address\_binding**

Purpose      Used to display IP-MAC Binding entries.

Syntax      **[ip\_mac {[all | ipaddress <ipaddr> mac\_address <macaddr>}] |  
blocked {[all | vlan\_name <vlan\_name> mac\_address <macaddr>}]  
| ports]**

Description      This command will display IP-MAC Binding entries. Three different kinds of information can be viewed.

- *ip\_mac* – Address Binding entries can be viewed by entering the physical and IP addresses of the device.
- *blocked* – Blocked address binding entries (bindings between VLAN names and MAC addresses) can be viewed by entering the VLAN name and the physical address of the device.
- *ports* – The number of enabled ports on a device.

Parameters      *all* – For IP\_MAC binding *all* specifies all the IP-MAC binding entries; for Blocked Address Binding entries *all* specifies all the blocked VLANs and their bound physical addresses.

*<ipaddr>* The IP address of the device where the IP-MAC binding is made.

*<macaddr>* The MAC address of the device where the IP-MAC binding is made.

*<vlan\_name>* The VLAN name of the VLAN that is bound to a MAC address in order to block a specific device on a known VLAN.

Restrictions      User Account Command Level – All

Example usage:

To show IP-MAC Binding on the switch:

```
DES-3800:admin#show address_binding ip_mac ipaddress 10.1.1.8
mac_address 00-00-00-00-00-12
Command: show address_binding ip_mac ipaddress 10.1.1.8
mac_address 00-00-00-00-00-12
```

```
ACL_mode : Enabled
Trap/Log   : Disabled
Enabled ports: 2
```

IP Address	MAC Address	Ports	Status	Mode
10.1.1.8	00-00-00-00-00-12	1-26	Active	ACL

```
Total entries : 1
```

```
DES-3800:admin#
```

## delete address\_binding

Purpose	Used to delete IP-MAC Binding entries.
Syntax	<b>[ip-mac [ipaddress &lt;ipaddr&gt; mac_address &lt;macaddr&gt;   all]   blocked [all   vlan_name &lt;vlan_name&gt; mac_address &lt;macaddr&gt;]]</b>
Description	<p>This command will delete IP-MAC Binding entries. Two different kinds of information can be deleted.</p> <ul style="list-style-type: none"> <li><i>IP_MAC</i> –Individual Address Binding entries can be deleted by entering the physical and IP addresses of the device. Toggling to <i>all</i> will delete all the Address Binding entries.</li> <li><i>Blocked</i> – Blocked address binding entries (bindings between VLAN names and MAC addresses) can be deleted by entering the VLAN name and the physical address of the device. To delete all the Blocked Address Binding entries, toggle <i>all</i>.</li> </ul>
Parameters	<p>&lt;ipaddr&gt; The IP address of the device where the IP-MAC binding is made.</p> <p>&lt;macaddr&gt; The MAC address of the device where the IP-MAC binding is made.</p> <p>&lt;vlan_name&gt; The VLAN name of the VLAN that is bound to a MAC address in order to block a specific device on a known VLAN.</p> <p><i>all</i> – For IP_MAC binding <i>all</i> specifies all the IP-MAC binding entries; for Blocked Address Binding entries <i>all</i> specifies all the blocked VLANs and their bound physical addresses.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete an IP-MAC Binding on the Switch:

```
DES-3800:admin#delete address-binding ip-mac ipaddress 10.1.1.1 mac_address 00-00-00-00-00-06
Command: delete address-binding ip-mac ipaddress 10.1.1.1 mac_address 00-00-00-00-00-06
```

```
Success.
```

```
DES-3800:admin#
```

**enable address\_binding acl\_mode**

Purpose	Used to enable the ACL mode for an IP-MAC binding entry.
Syntax	<b>enable address_binding acl_mode</b>
Description	This command, along with the <b>disable address_binding acl_mode</b> will enable and disable the ACL mode for IP-MAC binding on the Switch, without altering previously set configurations. When enabled, the Switch will automatically create two ACL packet content mask entries that can be viewed using the <b>show access_profile</b> command. These two ACL entries will aid the user in processing certain IP-MAC binding entries created.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator  The ACL entries created when this command is enabled, can only be automatically installed if the Access Profile table has two entries available of the possible 9 entries allowed. These access profile entries can only be deleted using the <b>disable address_binding acl_mode</b> and not though the <b>delete access_profile profile_id</b> command. Also, the <b>show config</b> command will not display the commands for creating the IP-MAC ACL mode access profile entries.

Example usage:

To enable IP-MAC Binding ACL mode on the Switch:

```
DES-3800:admin#enable address_binding acl_mode
Command: enable address_binding acl_mode

Success.

DES-3800:admin#
```

**disable address\_binding acl\_mode**

Purpose	Used to disable the ACL mode for an IP-MAC binding entry.
Syntax	<b>disable address_binding acl_mode</b>
Description	This command, along with the <b>enable address_binding acl_mode</b> will enable and disable the ACL mode for IP-MAC binding on the Switch, without altering previously set configurations. When disabled, the Switch will automatically delete two previously created ACL packet content mask entries that can be viewed using the <b>show access_profile</b> command.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator  The ACL entries created when this command is enabled, can only be automatically installed if the Access Profile table has two entries available of the possible 9 entries allowed. These access profile entries can only be deleted using the <b>disable address_binding acl_mode</b> and <b>NOT</b> though the <b>delete access_profile profile_id</b> command. Also, the <b>show config</b> command will not display the commands for creating the IP-MAC ACL mode access profile entries.

Example usage:

To disable IP-MAC Binding ACL mode on the Switch:

```
DES-3800:admin#disable address_binding acl_mode
Command: disable address_binding acl_mode
```

Success.

```
DES-3800:admin#
```

## enable address\_binding trap\_log

Purpose	Used to enable the trap log for the IP-MAC binding function.
Syntax	<b>enable address_binding trap_log</b>
Description	This command, along with the <b>disable address_binding trap_log</b> will enable and disable the sending of trap log messages for IP-MAC binding. When enabled, the Switch will send a trap log message to the SNMP agent and the Switch log when an ARP packet is received that doesn't match the IP-MAC binding configuration set on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable sending of IP-MAC Binding trap log messages on the Switch:

```
DES-3800:admin#enable address_binding trap_log
Command: enable address_binding trap_log
```

Success.

```
DES-3800:admin#
```

## disable address\_binding trap\_log

Purpose	Used to disable the trap log for the IP-MAC binding function.
Syntax	<b>disable address_binding trap_log</b>
Description	This command, along with the <b>enable address_binding trap_log</b> will enable and disable the sending of trap log messages for IP-MAC binding. When enabled, the Switch will send a trap log message to the SNMP agent and the Switch log when an ARP packet is received that doesn't match the IP-MAC binding configuration set on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable sending of IP-MAC Binding trap log messages on the Switch:

```
DES-3800:admin#disable address_binding trap_log
Command: disable address_binding trap_log
```

Success.

```
DES-3800:admin#
```

## IP COMMANDS (INCLUDING IP MULTINETTING)

IP Multinetting is a function that allows multiple IP interfaces to be assigned to the same VLAN. This is beneficial to the administrator when the number of IPs on the original interface is insufficient and the network administrator wishes not to resize the interface. IP Multinetting is capable of assigning another IP interface on the same VLAN without affecting the original stations or settings of the original interface.

Two types of interfaces are configured for IP multinetting, *primary* and *secondary*, and every IP interface must be classified as one of these. A *primary* interface refers to the first interface created on a VLAN, with no exceptions. All other interfaces created will be regarded as *secondary* only, and can only be created once a *primary* interface has been configured. There may be five interfaces per VLAN (one primary, and up to four secondary) and they are, in most cases, independent of each other. *Primary* interfaces cannot be deleted if the VLAN contains a *secondary* interface. Once the user creates multiple interfaces for a specified VLAN (*primary* and *secondary*), that set IP interface cannot be changed to another VLAN.

IP Multinetting is a valuable tool for network administrators requiring a multitude of IP addresses, but configuring the Switch for IP multinetting may cause troubleshooting and bandwidth problems, and should not be used as a long term solution. Problems may include:

The Switch may use extra resources to process packets for multiple IP interfaces.

The amount of broadcast data, such as RIP update packets and PIM hello packets, will be increased

The IP interface commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Each command is listed, in detail, in the following sections.

Command	Parameters
create ipif	<ipif_name 12> <ip_addr/netmask> <vlan_name 32> {secondary   state [enable   disable]   proxy_arp [enable   disable]}
config ipif	<ipif_name 12> [{ipaddress <network_address>   vlan <vlan_name 32>   state [enable   disable]}   proxy_arp [enable   disable]}   bootp   dhcp]
enable ipif	{<ipif_name 12>   all}
disable ipif	{<ipif_name 12>   all}
delete ipif	{<ipif_name 12>   all}
show ipif	{<ipif_name 12>}

Each command is listed, in detail, in the following sections.

create ipif	
Purpose	Used to create an IP interface on the Switch.
Syntax	<b>create ipif &lt;ipif_name 12&gt; &lt;ip_addr/netmask&gt; &lt;vlan_name 32&gt; {secondary   {state [enable   disable]   proxy_arp [enable   disable]}}</b>
Description	This command will create an IP interface.
Parameters	<p><b>&lt;ipif_name 12&gt;</b> – The name for the IP interface to be created. The user may enter an alphanumeric string of up to 12 characters to define the IP interface.</p> <p><b>&lt;ip_addr/netmask&gt;</b> – IP address and netmask of the IP interface to be created. The address and mask information can be specified using the traditional format (for example, 10.1.2.3/255.0.0.0) or in CIDR format, (10.1.2.3/8). (This parameter may also appear as &lt;ip_addr/netmask&gt;).</p> <p><b>&lt;vlan_name 32&gt;</b> – The name of the VLAN that will be associated with the above IP interface.</p> <p><b>secondary</b> – Enter this parameter if this configured IP interface is to be a <i>secondary</i> IP interface of the VLAN previously specified. <i>secondary</i></p>

## create ipif

interfaces can only be configured if a *primary* interface is first configured.

*proxy\_arp [enable | disable]* – Choose to enable or disable the proxy ARP for this IP interface. The Proxy ARP feature will allow this IP interface to reply to ARP requests destined for another interface by faking its identities the original ARP requester. The Switch is then capable of routing packets to the intended destination without configuring static routing or a default gateway. The default is disable.

*state [enable | disable]* – Allows the user to enable or disable the IP interface.

Restrictions User Account Command Level – Administrator and Operator

Example usage:

To create the primary IP interface, p1 on VLAN Trinity:

```
DES-3800:admin#create ipif p1 ipaddress 10.1.1.1 Trinity state enable
```

```
Command: create ipif p1 ipaddress 10.1.1.1 Trinity state enable
```

Success.

```
DES-3800:admin#
```

To create the secondary IP interface, p1 on VLAN Trinity:

```
DES-3800:admin#create ipif p1 ipaddress 12.1.1.1 Trinity secondary state enable
```

```
Command: create ipif p1 ipaddress 12.1.1.1 Trinity secondary state enable
```

Success.

```
DES-3800:admin#
```

## config ipif

Purpose	Used to configure an IP interface set on the Switch.
Syntax	<b>config ipif &lt;ipif_name 12&gt; [{ipaddress &lt;network_address&gt;   vlan &lt;vlan_name 32&gt;   state [enable   disable]   proxy_arp [enable   disable]}]   bootp   dhcp]</b>
Description	This command is used to configure the System IP interface on the Switch.
Parameters	<p><i>&lt;ipif_name 12&gt;</i> - Enter the previously created IP interface name desired to be configured.</p> <p><i>ipaddress &lt;network_address&gt;</i> – IP address and netmask of the IP interface to be configured. The address and mask information can be specified using the traditional format (for example, 10.1.2.3/255.0.0.0 or in CIDR format, 10.1.2.3/8). (This parameter may also appear as <i>&lt;ip_addr/netmask&gt;</i>).</p> <p><i>vlan &lt;vlan_name 32&gt;</i> – The name of the VLAN corresponding to the previously created IP interface. If a primary and secondary IP interface are configured for the same VLAN (subnet), the user cannot change the VLAN of the IP interface.</p> <p><i>state [enable   disable]</i> – Allows users to enable or disable the IP interface.</p> <p><i>proxy_arp [enable   disable]</i> – Choose to enable or disable the proxy ARP for this IP interface. The Proxy ARP feature will allow this IP interface to reply to ARP requests destined for another interface by faking its identities the original ARP requester. The Switch is then</p>

## config ipif

	capable of routing packets to the intended destination without configuring static routing or a default gateway. The default is disable.
	<i>bootp</i> – Allows the selection of the BOOTP protocol for the assignment of an IP address to the Switch's System IP interface.
	<i>dhcp</i> – Allows the selection of the DHCP protocol for the assignment of an IP address to the Switch's System IP interface.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure the IP interface System:

```
DES-3800:admin#config ipif System ipaddress 10.48.74.122/8
Command: config ipif System ipaddress 10.48.74.122/8

Success.

DES-3800:admin#
```

## enable ipif

Purpose	Used to enable an IP interface on the Switch.
Syntax	<b>enable ipif {&lt;ipif_name 12&gt;   all}</b>
Description	This command will enable the IP interface function on the Switch.
Parameters	<p><i>&lt;ipif_name 12&gt;</i> – The name of a previously configured IP interface to enable. Enter an alphanumeric entry of up to twelve characters to define the IP interface.</p> <p><i>all</i> – Entering this parameter will enable all the IP interfaces currently configured on the Switch.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable the ipif function on the Switch:

```
DES-6500:4#enable ipif s2
Command: enable ipif s2

Success.

DES-6500:4#
```

## disable ipif

Purpose	Used to disable the configuration of an IP interface on the Switch.
Syntax	<b>disable ipif {&lt;ipif_name 12&gt;   all}</b>
Description	This command will disable an IP interface on the Switch, without altering its configuration values.
Parameters	<p><i>&lt;ipif_name 12&gt;</i> – The name previously created to define the IP interface.</p> <p><i>all</i> – Entering this parameter will disable all the IP interfaces currently configured on the Switch.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable the IP interface named “s2”:

```
DES-3800:admin#disable ipif s2
Command: disable ipif s2

Success.

DES-3800:admin#
```

## delete ipif

Purpose	Used to delete the configuration of an IP interface on the Switch.
Syntax	<b>delete ipif {&lt;ipif_name 12&gt;   all}</b>
Description	This command will delete the configuration of an IP interface on the Switch.
Parameters	<ipif_name 12> – The name of the IP interface to delete. all – Entering this parameter will delete all the IP interfaces currently configured on the Switch.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete the IP interface named s2:

```
DES-3800:admin#delete ipif s2
Command: delete ipif s2

Success.

DES-3800:admin#
```

## show ipif

Purpose	Used to display the configuration of an IP interface on the Switch.
Syntax	<b>show ipif {&lt;ipif_name 12&gt;}</b>
Description	This command will display the configuration of an IP interface on the Switch.
Parameters	<ipif_name 12> – The name created for the IP interface to be viewed.
Restrictions	User Account Command Level – All

Example usage:

To display IP interface settings.

```
DES-3800:admin#show ipif System
Command: show ipif System

IP Interface Settings

Interface Name : System
Secondary      : FALSE
IP Address     : 10.48.74.122  (MANUAL)
Subnet Mask    : 255.0.0.0
VLAN Name     : default
Admin. State   : Enabled
Proxy ARP     : Disabled
Link Status    : Link UP
Member Ports  : 1-28

DES-3800:admin#
```

**NOTE:** In the IP Interface Settings table shown above, the Secondary field will have two displays. *FALSE* denotes that the IP interface is a primary IP interface while *TRUE* denotes a secondary IP interface.

## IGMP COMMANDS (INCLUDING IGMP v3)

IGMP or Internet Group Management Protocol is a protocol implemented by systems utilizing IPv4 to collect the membership information needed by the multicast routing protocol through various query messages sent out from the router or switch. Computers and network devices that want to receive multicast transmissions need to inform nearby routers that they will become members of a multicast group. The **Internet Group Management Protocol (IGMP)** is used to communicate this information. IGMP is also used to periodically check the multicast group for members that are no longer active.

In the case where there is more than one multicast router on a subnetwork, one router is elected as the 'querier'. This router then keeps track of the membership of the multicast groups that have active members. The information received from IGMP is then used to determine if multicast packets should be forwarded to a given subnetwork or not. The router can check, using IGMP, to see if there is at least one member of a multicast group on a given subnetwork. If there are no members on a subnetwork, packets will not be forwarded to that subnetwork.

The current release of the xStack DES-3800 Series switches now implements IGMPv3. Improvements of IGMPv3 over version 2 include:

- The introduction of the *SSM* or *Source Specific Multicast*. In previous versions of IGMP, the host would receive all packets sent to the multicast group. Now, a host will receive packets only from a specific source or sources. This is done through the implementation of *include* and *exclude* filters used to accept or deny traffic from these specific sources.
- In IGMPv2, Membership reports could contain only one multicast group whereas in v3, these reports can contain multiple multicast groups.
- Leaving a multicast group could only be accomplished using a specific leave message in v2. In v3, leaving a multicast group is done through a Membership report which includes a block message in the group report packet.
- For version 2, the host could respond to either a group query but in version 3, the host is now capable to answer queries specific to the group and the source.

IGMPv3 is backwards compatible with other versions of IGMP and all IGMP protocols must be used in conjunction with PIM-DM or DVMRP for optimal use.

The IGMP commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config igmp	[ipif <ipif_name 12>   all] {version <value 1-3>   query_interval <sec 1-31744>   max_response_time <sec 1-25>   robustness_variable <value 1-255>   last_member_query_interval <value 1-25>   state [enable   disable]}
show igmp	{ipif <ipif_name 12>}
show igmp group	{group <group>   ipif <ipif_name 12>}

Each command is listed, in detail, in the following sections.

### config igmp

Purpose	Used to configure IGMP on the Switch.
Syntax	<b>config igmp [ipif &lt;ipif_name 12&gt;   all] {version &lt;value 1-3&gt;   query_interval &lt;sec 1-31744&gt;   max_response_time &lt;sec 1-25&gt;   robustness_variable &lt;value 1-255&gt;   last_member_query_interval &lt;value 1-25&gt;   state [enable   disable]}</b>
Description	This command allows users to configure IGMP on the Switch.
Parameters	<p>&lt;ipif_name 12&gt; – The name of the IP interface for which you want to configure IGMP.</p> <p>all – Specifies all the IP interfaces on the Switch.</p> <p>version &lt;value 1-3&gt; – Select the IGMP version number.</p> <p>query_interval &lt;sec 1-31744&gt; – The time in seconds between general query transmissions, in seconds.</p>

## config igmp

*max\_response\_time* <sec 1-25> – Enter the maximum time in seconds that the Switch will wait for reports from members.

*robustness\_variable* <value 1-255> – This value states the permitted packet loss that guarantees IGMP.

*last\_member\_query\_interval* <value 1-25> – The Max Response Time inserted into Group-Specific Queries and Group-and-Source specific queries sent in response to Leave Group messages, and is also the amount of time between Group-Specific Query and Group-and-Source specific query messages. The default is 1 second

*state* [*enable* | *disable*] – Enables or disables IGMP for the specified IP interface.

Restrictions User Account Command Level – Administrator and Operator

Example Usage:

To configure the IGMPv2 for all IP interfaces.

```
DES-3800:admin#config igmp all version 2
```

```
Command: config igmp all version 2
```

```
Success.
```

```
DES-3800:admin#
```

## show igmp

Purpose Used to display the IGMP configuration for the Switch of for a specified IP interface.

Syntax **show igmp {ipif <ipif\_name 12>}**

Description This command will display the IGMP configuration for the Switch if no IP interface name is specified. If an IP interface name is specified, the command will display the IGMP configuration for that IP interface.

Parameters <ipif\_name 12> – The name of the IP interface for which the IGMP configuration will be displayed.

Restrictions User Account Command Level – All

Example usage:

To display IGMP configurations:

```
DES-3800:admin#show igmp
```

```
Command: show igmp
```

### IGMP Interface Configurations

Interface	IP Address/Netmask	Ver- sion	Query	Maximum Response Time	Robust- ness Value	Last Member Query Interval	State
System	10.90.90.90/8	1	125	10	2	1	Enabled
p1	20.1.1.1/8	1	125	10	2	1	Enabled

```
Total Entries: 2
```

```
DES-3800:admin#
```

## show igmp group

Purpose	Used to display the Switch's IGMP group table.
Syntax	<b>show igmp group {group &lt;group&gt;   ipif &lt;ipif_name 12&gt;}</b>
Description	This command will display the IGMP group configuration.
Parameters	<i>group &lt;group&gt;</i> – The ID of the multicast group to be displayed. <i>&lt;ipif_name 12&gt;</i> – The name of the IP interface of which the IGMP group is a member.
Restrictions	User Account Command Level – All

Example usage:

To display IGMP group table:

**DES-3800:admin#show igmp group**

**Command: show igmp group**

Interface	Multicast Group	Last Reporter	IP Querier	IP Expire
System	224.0.0.2	10.42.73.111	10.48.74.122	260
System	224.0.0.9	10.20.53.1	10.48.74.122	260
System	224.0.1.24	10.18.1.3	10.48.74.122	259
System	224.0.1.41	10.1.43.252	10.48.74.122	259
System	224.0.1.149	10.20.63.11	10.48.74.122	259

**Total Entries: 5**

**DES-3800:admin#**

## IGMP SNOOPING COMMANDS

The IGMP Snooping commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config igmp_snooping	[<vlan_name 32>   all] {host_timeout <sec 1-16711450>   router_timeout <sec 1-16711450>   leave_timer <sec 0-16711450>   state [enable   disable]   fast_leave [enable   disable]}
config igmp_snooping querier	[<vlan_name 32>   all] {query_interval <sec 1-65535>   max_response_time <sec 1-25>   robustness_variable <value 1-255>   last_member_query_interval <sec 1-25>   state [enable   disable]}
config router_ports	<vlan_name 32> [add   delete] <portlist>
enable igmp_snooping	{forward_mcrouter_only}
show igmp_snooping	{vlan <vlan_name 32>}
disable igmp_snooping	{forward_mcrouter_only}
show igmp snooping group	vlan <vlan_name 32>
show router_ports	{vlan <vlan_name 32>} {static   dynamic}
show igmp_snooping forwarding	{vlan <vlan_name 32>}

Each command is listed, in detail, in the following sections.

config igmp_snooping	
Purpose	Used to configure IGMP snooping on the Switch.
Syntax	<b>config igmp_snooping [&lt;vlan_name 32&gt;   all] {host_timeout &lt;sec 1-16711450&gt;   router_timeout &lt;sec 1-16711450&gt;   leave_timer &lt;sec 0-16711450&gt;   state [enable   disable]}   fast_leave [enable   disable]}</b>
Description	This command allows users to configure IGMP snooping on the Switch.
Parameters	<p>&lt;vlan_name 32&gt; – The name of the VLAN for which IGMP snooping is to be configured.</p> <p>host_timeout &lt;sec 1-16711450&gt; – Specifies the maximum amount of time a host can be a member of a multicast group without the Switch receiving a host membership report. The default is 260 seconds.</p> <p>router_timeout &lt;sec 1-16711450&gt; – Specifies the maximum amount of time a route can be a member of a multicast group without the Switch receiving a host membership report. The default is 260 seconds.</p> <p>leave_timer &lt;sec 1-16711450&gt; – Specifies the amount of time a Multicast address will stay in the database before it is deleted, after it has sent out a leave group message. An entry of zero (0) specifies an immediate deletion of the Multicast address. The default is 2 seconds.</p> <p>state [enable   disable] – Allows users to enable or disable IGMP snooping for the specified VLAN.</p> <p>fast_leave [enable   disable] – This parameter allows the user to enable the fast leave function. Enabled, this function will allow members of a multicast group to leave the group immediately (without the implementation of the Last Member Query Timer) when an IGMP Leave Report Packet is received by the Switch.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure IGMP snooping:

```
DES-3800:admin#config igmp_snooping default host_timeout 250 state enable
Command: config igmp_snooping default host_timeout 250 state enable

Success.

DES-3800:admin#
```

**NOTE:** The *Fast Leave* function in the **config igmp\_snooping** command can only be implemented if IGMP is disabled for all IP interfaces on the Switch. Configuring this function when IGMP is enabled will produce the error message “*Cannot set Fast leave when IGMP is running*” and consequently will not be implemented.

## config igmp\_snooping querier

Purpose	This command configures IGMP snooping querier.
Syntax	<b>config igmp_snooping querier</b> [ <b>&lt;vlan_name 32&gt;</b>   <b>all</b> ] <b>{query_interval &lt;sec 1-65535&gt;   max_response_time &lt;sec 1-25&gt;   robustness_variable &lt;value 1-255&gt;   last_member_query_interval &lt;sec 1-25&gt;   state [enable   disable]}</b>
Description	Used to configure the time in seconds between general query transmissions, the maximum time in seconds to wait for reports from members and the permitted packet loss that guarantees IGMP snooping.
Parameters	<p><b>&lt;vlan_name 32&gt;</b> – The name of the VLAN for which IGMP snooping querier is to be configured.</p> <p><b>query_interval &lt;sec 1-65535&gt;</b> – Specifies the amount of time in seconds between general query transmissions. The default setting is 125 seconds.</p> <p><b>max_response_time &lt;sec 1-25&gt;</b> – Specifies the maximum time in seconds to wait for reports from members. The default setting is 10 seconds.</p> <p><b>robustness_variable &lt;value 1-255&gt;</b> – Provides fine-tuning to allow for expected packet loss on a subnet. The value of the robustness variable is used in calculating the following IGMP message intervals:</p> <ul style="list-style-type: none"> <li>Group member interval—Amount of time that must pass before a multicast router decides there are no more members of a group on a network. This interval is calculated as follows: (robustness variable x query interval) + (1 x query response interval).</li> <li>Other querier present interval—Amount of time that must pass before a multicast router decides that there is no longer another multicast router that is the querier. This interval is calculated as follows: (robustness variable x query interval) + (0.5 x query response interval).</li> <li>Last member query count—Number of group-specific queries sent before the router assumes there are no local members of a group. The default number is the value of the robustness variable.</li> <li>By default, the robustness variable is set to 2. You might want to increase this value if you expect a subnet to be lossy. Although 1 is specified as a valid entry, the robustness variable should not be one or problems may arise.</li> </ul>

## config igmp\_snooping querier

*last\_member\_query\_interval* <sec 1-25> – The maximum amount of time between group-specific query messages, including those sent in response to leave-group messages. You may lower this interval to reduce the amount of time it takes a router to detect the loss of the last member of a group.

*state* [enable | disable] – Allows the Switch to be specified as an IGMP Querier or Non-querier.

Restrictions User Account Command Level – Administrator and Operator

Example usage:

To configure IGMP snooping:

**DES-3800:admin#config igmp\_snooping querier default query\_interval 125 state enable**

**Command: config igmp\_snooping querier default query\_interval 125 state enable**

**Success.**

**DES-3800:admin#**

## config router\_ports

Purpose Used to configure ports as router ports.

Syntax **config router\_ports <vlan\_name 32> [add | delete] <portlist>**

Description This command allows designation of a range of ports as being connected to multicast-enabled routers. This will ensure that all packets with such a router as its destination will reach the multicast-enabled router – regardless of protocol, etc.

Parameters *add* | *delete* – Specify whether to add or delete ports as router ports.  
*<vlan\_name 32>* – The name of the VLAN on which the router port resides.  
*<portlist>* – Specifies a port or range of ports that will be configured as router ports.

Restrictions User Account Command Level – Administrator and Operator

Example usage:

To set up static router ports:

**DES-3800:admin#config router\_ports default add 1-10**

**Command: config router\_ports default add 1-10**

**Success.**

**DES-3800:admin#**

## enable igmp\_snooping

Purpose Used to enable IGMP snooping on the Switch.

Syntax **enable igmp\_snooping {forward\_mcrouter\_only}**

Description This command allows enabling of IGMP snooping on the Switch. If *forward\_mcrouter\_only* is specified, the Switch will only forward all multicast traffic to the multicast router, only. Otherwise, the Switch forwards all multicast traffic to any IP router.

**enable igmp\_snooping**

Parameters	<i>forward_mcrouter_only</i> – Specifies that the Switch should only forward all multicast traffic to a multicast-enabled router. Otherwise, the Switch will forward all multicast traffic to any IP router.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable IGMP snooping on the Switch:

```
DES-3800:admin#enable igmp_snooping
Command: enable igmp_snooping

Success.

DES-3800:admin#
```

**disable igmp\_snooping**

Purpose	Used to disable IGMP snooping on the Switch.
Syntax	<b>disable igmp_snooping {forward_mcrouter_only}</b>
Description	This command disables IGMP snooping on the Switch. IGMP snooping can be disabled only if IP multicast routing is not being used. Disabling IGMP snooping allows all IGMP and IP multicast traffic to flood within a given IP interface.
Parameters	<i>forward_mcrouter_only</i> – Adding this parameter to this command will disable forwarding all multicast traffic to a multicast-enabled routers. The Switch will then forward all multicast traffic to any IP router. Entering this command without the parameter will disable igmp snooping on the Switch.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable IGMP snooping on the Switch:

```
DES-3800:admin#disable igmp_snooping
Command: disable igmp_snooping

Success.

DES-3800:admin#
```

Example usage:

To disable forwarding all multicast traffic to a multicast-enabled router:

```
DES-3800:admin#disable igmp_snooping forward_mcrouter_only
Command: disable igmp_snooping forward_mcrouter_only

Success.

DES-3800:admin#
```

**show igmp\_snooping**

Purpose	Used to show the current status of IGMP snooping on the Switch.
Syntax	<b>show igmp_snooping {vlan &lt;vlan_name 32&gt;}</b>
Description	This command will display the current IGMP snooping configuration on the Switch.
Parameters	<vlan_name 32> – The name of the VLAN for which to view the IGMP snooping configuration.
Restrictions	User Account Command Level – All

Example usage:

To show IGMP snooping:

```
DES-3800:admin#show igmp_snooping
Command: show igmp_snooping

IGMP Snooping Global State : Disabled
Multicast router Only      : Disabled

DES-3800:admin#
```

**show igmp\_snooping group**

Purpose	Used to display the current IGMP snooping group configuration on the Switch.
Syntax	<b>show igmp_snooping group {vlan &lt;vlan_name 32&gt;}</b>
Description	This command will display the current IGMP snooping group configuration on the Switch.
Parameters	<vlan_name 32> – The name of the VLAN for which to view IGMP

**show igmp\_snooping group**

snooping group configuration information.

Restrictions User Account Command Level – All

Example usage:

To show IGMP snooping group:

DES-3800:admin#show igmp\_snooping group

Command: show igmp\_snooping group

VLAN Name : default  
 Multicast group: 224.0.0.2  
 MAC address : 01-00-5E-00-00-02  
 Reports : 1  
 Port Member : 2,5

VLAN Name : default  
 Multicast group: 224.0.0.9  
 MAC address : 01-00-5E-00-00-09  
 Reports : 1  
 Port Member : 6,8

VLAN Name : default  
 Multicast group: 234.5.6.7  
 MAC address : 01-00-5E-05-06-07  
 Reports : 1  
 Port Member : 4,10

VLAN Name : default  
 Multicast group: 236.54.63.75  
 MAC address : 01-00-5E-36-3F-4B  
 Reports : 1  
 Port Member : 18,22

VLAN Name : default  
 Multicast group: 239.255.255.250  
 MAC address : 01-00-5E-7F-FF-FA  
 Reports : 2  
 Port Member : 9,19

VLAN Name : default  
 Multicast group: 239.255.255.254  
 MAC address : 01-00-5E-7F-FF-FE  
 Reports : 1  
 Port Member : 13,17  
 Total Entries : 6

DES-3800:admin#

**show router\_ports**

Purpose	Used to display the currently configured router ports on the Switch.
Syntax	<b>show router_ports {vlan &lt;vlan_name 32&gt;} {static   dynamic}</b>
Description	This command will display the router ports currently configured on the Switch.
Parameters	<p>&lt;vlan_name 32&gt; – The name of the VLAN on which the router port resides.</p> <p><i>static</i> – Displays router ports that have been statically configured.</p>

## show router\_ports

*dynamic* – Displays router ports that have been dynamically configured.

Restrictions User Account Command Level – All

Example usage:

To display the router ports.

```
DES-3800:admin#show router_ports
```

```
Command: show router_ports
```

```
VLAN Name      : default
```

```
Static router port : 1-2,10
```

```
Dynamic router port :
```

```
Total Entries: 1
```

```
DES-3800:admin#
```

## show igmp\_snooping forwarding

Purpose Used to display the IGMP snooping forwarding table entries on the Switch.

Syntax **show igmp\_snooping forwarding {vlan <vlan\_name 32>}**

Description This command will display the current IGMP snooping forwarding table entries currently configured on the Switch.

Parameters <vlan\_name 32> – The name of the VLAN for which to view IGMP snooping forwarding table information.

Restrictions User Account Command Level – All

Example usage:

To view the IGMP snooping forwarding table for VLAN “Trinity”:

```
DES-3800:admin#show igmp_snooping forwarding vlan Trinity
```

```
Command: show igmp_snooping forwarding vlan Trinity
```

```
VLAN Name      : Trinity
```

```
Multicast group : 224.0.0.2
```

```
MAC address    : 01-00-5E-00-00-02
```

```
Port Member    : 17
```

```
Total Entries: 1
```

```
DES-3800:admin#
```

**DHCP RELAY**

The DHCP relay commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config dhcp_relay	{hops <value 1-16>   time <sec 0-65535>}
config dhcp_relay add ipif	<ipif_name 12> <ipaddr>
config dhcp_relay delete ipif	<ipif_name 12> <ipaddr>
config dhcp_relay option_82 state	[enable   disable]
config dhcp_relay option_82 check	[enable   disable]
config dhcp_relay option_82 policy	[replace   drop   keep]
show dhcp_relay	{ipif <ipif_name 12>}
enable dhcp_relay	
disable dhcp_relay	

Each command is listed in detail in the following sections.

**config dhcp\_relay**

Purpose	Used to configure the DHCP/BOOTP relay feature of the switch.
Syntax	<b>config dhcp_relay {hops &lt;value 1-16&gt;   time &lt;sec 0-65535&gt;}</b>
Description	This command is used to configure the DHCP/BOOTP relay feature.
Parameters	<p><i>hops &lt;value 1-16&gt;</i> - Specifies the maximum number of relay agent hops that the DHCP packets can cross.</p> <p><i>time &lt;sec 0-65535&gt;</i> - If this time is exceeded, the Switch will relay the DHCP packet.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To config DHCP relay:

```
DES-3800:admin#config dhcp_relay hops 2 time 23
Command: config dhcp_relay hops 2 time 23

Success.

DES-3800:admin#
```

**config dhcp\_relay add ipif**

Purpose	Used to add an IP destination address to the switch's DHCP/BOOTP relay table.
Syntax	<b>config dhcp_relay add ipif &lt;ipif_name 12&gt; &lt;ipaddr&gt;</b>
Description	This command adds an IP address as a destination to which to forward (relay) DHCP/BOOTP relay packets.
Parameters	<ipif_name 12> The name of the IP interface in which DHCP relay is to be enabled. <ipaddr> The DHCP server IP address.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To add an IP destination to the DHCP relay table:

```
DES-3800:admin#config dhcp_relay add ipif System 10.58.44.6
Command: config dhcp_relay add ipif System 10.58.44.6

Success.

DES-3800:admin#
```

**config dhcp\_relay delete ipif**

Purpose	Used to delete one or all IP destination addresses from the Switch's DHCP/BOOTP relay table.
Syntax	<b>config dhcp_relay delete ipif &lt;ipif_name 12&gt; &lt;ipaddr&gt;</b>
Description	This command is used to delete an IP destination addresses in the Switch's DHCP/BOOTP relay table.
Parameters	<ipif_name 12> The name of the IP interface that contains the IP address below. <ipaddr> The DHCP server IP address.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete an IP destination from the DHCP relay table:

```
DES-3800:admin#config dhcp_relay delete ipif System 10.58.44.6
Command: config dhcp_relay delete ipif System 10.58.44.6

Success.

DES-3800:admin#
```

**config dhcp\_relay option\_82 state**

Purpose	Used to configure the state of DHCP relay agent information option 82 of the switch.
Syntax	<b>config dhcp_relay option_82 state [enable   disable]</b>
Description	This command is used to configure the state of DHCP relay agent information option 82 of the switch. The relay agent will insert and remove DHCP relay information (option 82 field) in messages between

**config dhcp\_relay option\_82 state**

	DHCP server and client. When the relay agent receives the DHCP request, it adds the option 82 information, and the IP address of the relay agent (if the relay agent is configured), to the packet. Once the option 82 information has been added to the packet it is sent on to the DHCP server, which receives the packet, and if the server is capable of option 82, it can implement policies like restricting the number of IP addresses that can be assigned to a single remote ID or circuit ID. The DHCP server will then echo the option 82 field in the DHCP reply. The DHCP server unicasts the reply to the back to the relay agent if the request was relayed to the server by the relay agent. The Switch then verifies that it originally inserted the option 82 data. Finally, the relay agent removes the option 82 field and forwards the packet to the switch port that is connected to the DHCP client that sent the DHCP request.
Parameters	<p><i>enable</i> – Choose this parameter to enable the addition of option 82 information to a packet.</p> <p><i>disable</i> - Choose <i>disable</i> the relay agent from inserting and removing DHCP relay information (option 82 field) in messages between DHCP servers and clients, and the check and policy settings will have no effect.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure DHCP relay option 82 state:

```
DES-3800:admin#config dhcp_relay option_82 state enable
Command: config dhcp_relay option_82 state enable

Success.

DES-3800:admin#
```

**config dhcp\_relay option\_82 check**

Purpose	Used to configure the checking mechanism of DHCP relay agent information option 82 of the switch.
Syntax	<b>config dhcp_relay option_82 check [enable   disable]</b>
Description	This command is used to configure the checking mechanism of DHCP/BOOTP relay agent information option 82 of the switch. The relay agent will check the validity of the packet's option 82 field. If the switch receives a packet that contains the option 82 field from a DHCP client, the switch drops the packet because it is invalid. In packets received from DHCP servers, the relay agent will drop invalid messages.
Parameters	<p><i>enable</i> – Choose this parameter to enable validity checking of option 82 within packets.</p> <p><i>disable</i> - When the field is toggled to <i>disable</i>, the relay agent will not check the validity of the packet's option 82 field.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure DHCP relay option 82 check:

```
DES-3800:admin#config dhcp_relay option_82 check enable
Command: config dhcp_relay option_82 check enable
```

Success.

```
DES-3800:admin#
```

## config dhcp\_relay option\_82 policy

Purpose	Used to configure the reforwarding policy of relay agent information option 82 of the Switch.
Syntax	<b>config dhcp_relay option_82 policy [replace   drop   keep]</b>
Description	This command is used to configure the reforwarding policy of DHCP relay agent information option 82 of the Switch.
Parameters	<p><i>replace</i> - The option 82 field will be replaced if the option 82 field already exists in the packet received from the DHCP client.</p> <p><i>drop</i> - The packet will be dropped if the option 82 field already exists in the packet received from the DHCP client.</p> <p><i>keep</i> - The option 82 field will be retained if the option 82 field already exists in the packet received from the DHCP client.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure DHCP relay option 82 policy:

```
DES-3800:admin#config dhcp_relay option_82 policy replace
Command: config dhcp_relay option_82 policy replace
```

Success.

```
DES-3800:admin#
```

## show dhcp\_relay

Purpose	Used to display the current DHCP/BOOTP relay configuration.
Syntax	<b>show dhcp_relay {ipif &lt;ipif_name 12&gt;}</b>
Description	This command will display the current DHCP relay configuration for the Switch, or if an IP interface name is specified, the DHCP relay configuration for that IP interface.
Parameters	<i>ipif &lt;ipif_name 12&gt;</i> - The name of the IP interface for which to display the current DHCP relay configuration.
Restrictions	User Account Command Level – All

Example usage:

To show the DHCP relay configuration:

```
DES-3800:admin#show dhcp_relay
Command: show dhcp_relay

DHCP/BOOTP Relay Status           : Enabled
DHCP/BOOTP Hops Count Limit       : 2
DHCP/BOOTP Relay Time Threshold   : 23
DHCP Relay Agent Information Option 82 State : Enabled
DHCP Relay Agent Information Option 82 Check : Enabled
DHCP Relay Agent Information Option 82 Policy : Replace

Interface  Server 1  Server 2  Server 3  Server 4
-----
System     10.58.44.6

DES-3800:admin#
```

Example usage:

To show a single IP destination of the DHCP relay configuration:

```
DES-3800:admin#show dhcp_relay ipif System
Command: show dhcp_relay ipif System

Interface  Server 1  Server 2  Server 3  Server 4
-----
System     10.58.44.6

DES-3800:admin#
```

## enable dhcp\_relay

Purpose	Used to enable the DHCP/BOOTP relay function on the Switch.
Syntax	<b>enable dhcp_relay</b>
Description	This command is used to enable the DHCP/BOOTP relay function on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable DHCP relay:

```
DES-3800:admin#enable dhcp_relay
Command: enable dhcp_relay

Success.

DES-3800:admin#
```

## **disable dhcp\_relay**

Purpose	Used to disable the DHCP/BOOTP relay function on the Switch.
Syntax	<b>disable dhcp_relay</b>
Description	This command is used to disable the DHCP/BOOTP relay function on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable DHCP relay:

```
DES-3800:admin#disable dhcp_relay
Command: disable dhcp_relay

Success.

DES-3800:admin#
```

## LIMITED IP MULTICAST ADDRESS

The Limited IP Multicast command allows the administrator to permit or deny access to a port or range of ports by specifying a range of multicast addresses. The Limited IP Multicast Commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config limited multicast address	<portlist> {from <multicast_ipaddr> to <multicast_ipaddr> access [permit   deny]   state [enable   disable]}
delete limited multicast address	[all   <portlist>]
show limited multicast address	{<portlist>}

Each command is listed in detail in the following sections.

config limited multicast address	
Purpose	Used to configure limited IP multicast address range.
Syntax	<b>config limited multicast address &lt;portlist&gt; {from &lt;multicast_ipaddr&gt; to &lt;multicast_ipaddr&gt; access [permit   deny]   state [enable   disable]}</b>
Description	The <b>config limited multicast address</b> command allows the user to configure the multicast address range, access level, and state.
Parameters	<p><b>&lt;portlist&gt;</b> - A port or range of ports to config the limited multicast address.</p> <p><b>from</b> - Enter the lowest multicast IP address of the range.</p> <p><b>to</b> - Enter the highest multicast IP address of the range.</p> <p><b>access</b> - Use the access field to either <i>permit</i> or <i>deny</i> to limit or grant access to a specified range of Multicast addresses on a particular port or range of ports.</p> <p><b>state</b> - This parameter allows the user to <i>enable</i> or <i>disable</i> the limited multicast address range on a specific port or range of ports.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure the limited multicast address on ports 1-3:

```
DES-3800:admin#config limited multicast address 1-3 from 224.1.1.1 to 224.1.1.2 access
permit state enable
Command: config limited multicast address 1-3 from 224.1.1.1 to 224.1.1.2 access
permit state enable

Success.

DES-3800:admin#
```

**delete limited multicast address**

Purpose	Used to delete Limited IP multicast address range.
Syntax	<b>delete limited multicast address [all   &lt;portlist&gt;]</b>
Description	The <b>delete limited multicast address</b> command allows the user to delete all multicast address ranges or a selected range based on what port or ports the range has been assigned to.
Parameters	<i>all</i> - Allows the user to delete all limited multicast addresses that have been configured on the Switch. <i>&lt;portlist&gt;</i> - Allows the user to delete only those multicast address ranges that have been assigned to a particular port or range of ports.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete the limited multicast address on ports 1-3:

```
DES-3800:admin#delete limited multicast address 1-3
Command: delete limited multicast address 1-3

Success.

DES-3800:admin#
```

**show limited multicast address**

Purpose	Used to show per-port limited IP multicast address range.
Syntax	<b>show limited multicast address {&lt;portlist&gt;}</b>
Description	The show limited multicast address command allows you to show multicast address range by ports.
Parameters	<i>&lt;portlist&gt;</i> A port or range of ports on which the limited multicast address range to be shown has been assigned.
Restrictions	User Account Command Level – All

Example usage:

To show the limited multicast address on ports 1-3:

```
DES-3800:admin#show limited multicast address 1-3
Command: show limited multicast address 1-3
```

Port	From	To	Access	Status
1	224.1.1.1	224.1.1.2	permit	enable
2	224.1.1.1	224.1.1.2	permit	enable
3	224.1.1.1	224.1.1.2	permit	enable

```
DES-3800:admin#
```

## 802.1X COMMANDS (INCLUDING GUEST VLANs)

The DES-3800 implements the server-side of the IEEE 802.1x Port-based and MAC-based Network Access Control. This mechanism is intended to allow only authorized users, or other network devices, access to network resources by establishing criteria for each port on the Switch that a user or network device must meet before allowing that port to forward or receive frames.

Command	Parameters
enable 802.1x	
disable 802.1x	
show 802.1x auth_state	{ports <portlist>}
show 802.1x auth_configuration	{ports <portlist>}
config 802.1x capability ports	[<portlist>   all] [authenticator   none]
config 802.1x auth_parameter ports	[<portlist>   all] [default   {direction [both   in]   port_control [force_unauth   auto   force_auth]   quiet_period <sec 0-65535>   tx_period <sec 1-65535>   supp_timeout <sec 1-65535>   server_timeout <sec 1-65535>   max_req <value 1-10>   reauth_period <sec 1-65535>   enable_reauth [enable   disable]}]
config 802.1x init	[port_based ports [<portlist>   all]   mac_based [ports] [<portlist>   all] {mac_address <macaddr>}]
config 802.1x auth_mode	[port_based   mac_based]
config 802.1x reauth	{port_based ports [<portlist>   all]   mac_based [ports] [<portlist>   all] {mac_address <macaddr>}}
config radius add	<server_index 1-3> <server_ip> key <passwd 32> [default   {auth_port <udp_port_number 1-65535>   acct_port <udp_port_number 1-65535>}]
config radius delete	<server_index 1-3>
config radius	<server_index 1-3> {ipaddress <server_ip>   key <passwd 32> [auth_port <udp_port_number 1-65535> acct_port <udp_port_number 1-65535>]}
show radius	
create 802.1x guest_vlan	<vlan_name 32>
config 802.1x guest_vlan ports	[<portlist>   all] state [enable   disable]
delete 802.1x guest_vlan	{<vlan_name 32>}
show 802.1x guest_vlan	

Each command is listed, in detail, in the following sections

### enable 802.1x

Purpose	Used to enable the 802.1x server on the Switch.
Syntax	<b>enable 802.1x</b>
Description	The <b>enable 802.1x</b> command enables the 802.1x Network Access control server application on the Switch. To select between port-based or MAC-based, use the <b>config 802.1x auth_mode</b> command.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable 802.1x switch wide:

```
DES-3800:admin#enable 802.1x
Command: enable 802.1x

Success.

DES-3800:admin#
```

## disable 802.1x

Purpose	Used to disable the 802.1x server on the Switch.
Syntax	<b>disable 802.1x</b>
Description	The <b>disable 802.1x</b> command is used to disable the 802.1x Network Access control server application on the Switch. To select between port-based or MAC-based, use the <b>config 802.1x auth_mode</b> command.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable 802.1x on the Switch:

```
DES-3800:admin#disable 802.1x
Command: disable 802.1x

Success.

DES-3800:admin#
```

## show 802.1x auth\_configuration

Purpose	Used to display the current configuration of the 802.1x server on the Switch.
Syntax	<b>show 802.1x auth_configuration {ports &lt;portlist&gt;}</b>
Description	The <b>show 802.1x user</b> command is used to display the 802.1x Port-based or MAC-based Network Access control local users currently configured on the Switch.
Parameters	<p><i>ports &lt;portlist&gt;</i> – Specifies a port or range of ports to view.</p> <p>The following details are displayed:</p> <p>802.1x Enabled / Disabled – Shows the current status of 802.1x functions on the Switch.</p> <p>Authentication Mode – Shows the authentication mode, whether it be by MAC address or by port.</p> <p>Authentication Protocol: Radius_Eap – Shows the authentication protocol suite in use between the Switch and a RADIUS server. May read <i>Radius_Eap</i> or <i>Radius_Pap</i>.</p> <p>Port number – Shows the physical port number on the Switch.</p> <p>Capability: Authenticator/None – Shows the capability of 802.1x functions on the port number displayed above. There are two 802.1x capabilities that can be set on the Switch: Authenticator and None.</p> <p>AdminCtlDir: Both / In – Shows whether a controlled Port that is unauthorized will exert control over communication in both receiving and transmitting</p>

**show 802.1x auth\_configuration**

directions, or just the receiving direction.

OpenCrDir: Both / In – Shows whether a controlled Port that is unauthorized will exert control over communication in both receiving and transmitting directions, or just the receiving direction.

Port Control: ForceAuth / ForceUnauth / Auto – Shows the administrative control over the port's authorization status. ForceAuth forces the Authenticator of the port to become Authorized. ForceUnauth forces the port to become Unauthorized.

QuietPeriod – Shows the time interval between authentication failure and the start of a new authentication attempt.

TxPeriod – Shows the time to wait for a response from a supplicant (user) to send EAP Request / Identity packets.

SuppTimeout – Shows the time to wait for a response from a supplicant (user) for all EAP packets, except for the Request / Identity packets.

ServerTimeout – Shows the length of time to wait for a response from a Radius server.

MaxReq – Shows the maximum number of times to retry sending packets to the supplicant.

ReAuthPeriod – Shows the time interval between successive re-authentications.

ReAuthenticate: Enabled / Disabled – Shows whether or not to re-authenticate.

Restrictions

User Account Command Level – All

Example usage:

To display the 802.1x authentication states:

```
DES-3800:admin#show 802.1x auth_configuration ports 1
```

```
Command: show 802.1x auth_configuration ports 1
```

```
802.1X           : Enabled
Authentication Mode : Port_based
Authentication Protocol : Radius_Eap
```

```
Port number      : 1
Capability       : None

ReAuthPeriod     : 3600 sec
ReAuthenticate    : Disabled
```

```
CTRL+C ESC q Quit SPACE n Next Page Enter Next Entry a All
```

**show 802.1x auth\_state**

**Purpose** Used to display the current authentication state of the 802.1x server on the Switch.

**Syntax** **show 802.1x auth\_state {ports <portlist>}**

**Description** The **show 802.1x auth\_state** command is used to display the current

**show 802.1x auth\_state**

authentication state of the 802.1x Port-based or MAC-based Network Access Control server application on the Switch.

**Parameters**

*ports <portlist>* – Specifies a port or range of ports to be viewed.

The following details what is displayed:

Port number – Shows the physical port number on the Switch.

Auth PAE State: Initialize / Disconnected / Connecting / Authenticating / Authenticated / Held / ForceAuth / ForceUnauth – Shows the current state of the Authenticator PAE.

Backend State: Request / Response / Fail / Idle / Initialize / Success / Timeout – Shows the current state of the Backend Authenticator.

Port Status: Authorized / Unauthorized – Shows the result of the authentication process. Authorized means that the user was authenticated, and can access the network. Unauthorized means that the user was not authenticated, and cannot access the network.

**Restrictions**

User Account Command Level – All

Example usage:

To display the 802.1x auth state for Port-based 802.1x:

<b>DES-3800:admin#show 802.1x auth_state</b>				
<b>Command: show 802.1x auth_state</b>				
<b>Port</b>	<b>Auth</b>	<b>PAE State</b>	<b>Backend State</b>	<b>Port Status</b>

## config 802.1x auth\_mode

Purpose	Used to configure the 802.1x authentication mode on the Switch.
Syntax	<b>config 802.1x auth_mode {port_based   mac_based}</b>
Description	The config 802.1x authentication mode command is used to enable either the port-based or MAC-based 802.1x authentication feature on the Switch.
Parameters	<i>[port_based   mac_based]</i> – The Switch allows users to authenticate 802.1x by either port or MAC address.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure 802.1x authentication by MAC address:

```
DES-3800:admin#config 802.1x auth_mode mac_based
```

```
Command: config 802.1x auth_mode mac_based
```

```
Success.
```

```
DES-3800:admin#
```

## config 802.1x capability ports

Purpose	Used to configure the 802.1x capability of a range of ports on the Switch.
Syntax	<b>config 802.1x capability ports [&lt;portlist&gt;   all] [authenticator   none]</b>
Description	The <b>config 802.1x</b> command has four capabilities that can be set for each port. Authenticator, Supplicant, Authenticator and Supplicant,

**config 802.1x capability ports**

	and None.
Parameters	<p><i>&lt;portlist&gt;</i> – Specifies a port or range of ports to be configured.</p> <p><i>all</i> – Specifies all of the ports on the Switch.</p> <p><i>authenticator</i> – A user must pass the authentication process to gain access to the network.</p> <p><i>none</i> – The port is not controlled by the 802.1x functions.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure 802.1x capability on ports 1-10:

```
DES-3800:admin#config 802.1x capability ports 1 – 10 authenticator
Command: config 802.1x capability ports 1 – 10 authenticator

Success.

DES-3800:admin#
```

**config 802.1x auth\_parameter**

<b>Purpose</b>	Used to configure the 802.1x authentication parameters on a range of ports. The default parameter will return all ports in the specified range to their default 802.1x settings.
<b>Syntax</b>	<b>config 802.1x auth_parameter ports [&lt;portlist&gt;   all] [default   {direction [both   in]   port_control [force_unauth   auto   force_auth]   quiet_period &lt;sec 0-65535&gt;   tx_period &lt;sec 1-65535&gt;   supp_timeout &lt;sec 1-65535&gt;   server_timeout &lt;sec 1-65535&gt;   max_req &lt;value 1-10&gt;   reauth_period &lt;sec 1-65535&gt;   enable_reauth [enable   disable]]]</b>
<b>Description</b>	The <b>config 802.1x auth_parameter</b> command is used to configure the 802.1x Authentication parameters on a range of ports. The default parameter will return all ports in the specified range to their default 802.1x settings.
<b>Parameters</b>	<p><i>&lt;portlist&gt;</i> – Specifies a port or range of ports to be configured.</p> <p><i>all</i> – Specifies all of the ports on the Switch.</p> <p><i>default</i> – Returns all of the ports in the specified range to their 802.1x default settings.</p> <p><i>direction [both   in]</i> – Determines whether a controlled port blocks communication in both the receiving and transmitting directions, or just the receiving direction.</p> <p><i>port_control</i> – Configures the administrative control over the authentication process for the range of ports. The user has the following authentication options:</p> <ul style="list-style-type: none"> <li><i>force_auth</i> – Forces the Authenticator for the port to become authorized. Network access is allowed.</li> <li><i>auto</i> – Allows the port's status to reflect the outcome of the authentication process.</li> <li><i>force_unauth</i> – Forces the Authenticator for the port to become unauthorized. Network access will be blocked.</li> </ul> <p><i>quiet_period &lt;sec 0-65535&gt;</i> – Configures the time interval between authentication failure and the start of a new authentication attempt.</p> <p><i>tx_period &lt;sec 1-65535&gt;</i> – Configures the time to wait for a response from a supplicant (user) to send EAP Request/Identity packets.</p>

**config 802.1x auth\_parameter**

*supp\_timeout* <sec 1-65535> - Configures the time to wait for a response from a supplicant (user) for all EAP packets, except for the Request/Identity packets.

*server\_timeout* <sec 1-65535> - Configure the length of time to wait for a response from a RADIUS server.

*max\_req* <value 1-10> - Configures the number of times to retry sending packets to a supplicant (user).

*reauth\_period* <sec 1-65535> - Configures the time interval between successive re-authentications.

*enable\_reauth* [enable | disable] - Determines whether or not the Switch will re-authenticate. Enabled causes re-authentication of users at the time interval specified in the Re-authentication Period field, above.

**Restrictions**

User Account Command Level – Administrator and Operator

Example usage:

To configure 802.1x authentication parameters for ports 1 – 20:

```
DES-3800:admin#config 802.1x auth_parameter ports 1-20 direction both
Command: config 802.1x auth_parameter ports 1-20 direction both

Success.

DES-3800:admin#
```

**config 802.1x init**

Purpose	Used to initialize the 802.1x function on a range of ports.
Syntax	<b>config 802.1x init {port_based ports [&lt;portlist&gt;   all]   mac_based [ports] [&lt;portlist&gt;   all] {mac_address &lt;macaddr&gt;}}</b>
Description	The <b>config 802.1x init</b> command is used to immediately initialize the 802.1x functions on a specified range of ports or for specified MAC addresses operating from a specified range of ports.
Parameters	<p><i>port_based</i> – This instructs the Switch to initialize 802.1x functions based only on the port number. Ports approved for initialization can then be specified.</p> <p><i>mac_based</i> – This instructs the Switch to initialize 802.1x functions based only on the MAC address. MAC addresses approved for initialization can then be specified.</p> <p><i>ports</i> &lt;portlist&gt; – Specifies a port or range of ports to be configured.</p> <p><i>all</i> – Specifies all of the ports on the Switch.</p> <p><i>mac_address</i> &lt;macaddr&gt; - Enter the MAC address to be initialized.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To initialize the authentication state machine of all ports:

```
DES-3800:admin# config 802.1x init port_based ports all
Command: config 802.1x init port_based ports all

Success.

DES-3800:admin#
```

## config 802.1x reauth

Purpose	Used to configure the 802.1x re-authentication feature of the Switch.
Syntax	<b>config 802.1x reauth {port_based ports [&lt;portlist&gt;   all]   mac_based [ports] [&lt;portlist&gt;   all] {mac_address &lt;macaddr&gt;}}</b>
Description	The <b>config 802.1x reauth</b> command is used to re-authenticate a previously authenticated device based on port number.
Parameters	<p><i>port_based</i> – This instructs the Switch to re-authorize 802.1x functions based only on the port number. Ports approved for re-authorization can then be specified.</p> <p><i>mac_based</i> – This instructs the Switch to re-authorize 802.1x functions based only on the MAC address. MAC addresses approved for re-authorization can then be specified.</p> <p><i>ports &lt;portlist&gt;</i> – Specifies a port or range of ports to be re-authorized.</p> <ul style="list-style-type: none"> <li>all – Specifies all of the ports on the Switch.</li> </ul> <p><i>mac_address &lt;macaddr&gt;</i> - Enter the MAC address to be re-authorized.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure 802.1x reauthentication for ports 1-18:

```
DES-3800:admin#config 802.1x reauth port_based ports 1-18
Command: config 802.1x reauth port_based ports 1-18

Success.

DES-3800:admin#
```

## config radius add

Purpose	Used to configure the settings the Switch will use to communicate with a RADIUS server.
Syntax	<b>config radius add &lt;server_index 1-3&gt; &lt;server_ip&gt; key &lt;passwd 32&gt; [default   {auth_port &lt;udp_port_number 1-65535&gt;   acct_port &lt;udp_port_number 1-65535&gt;}]</b>
Description	The <b>config radius add</b> command is used to configure the settings the Switch will use to communicate with a RADIUS server.
Parameters	<p><i>&lt;server_index 1-3&gt;</i> – Assigns a number to the current set of RADIUS server settings. Up to 3 groups of RADIUS server settings can be entered on the Switch.</p> <p><i>&lt;server_ip&gt;</i> – The IP address of the RADIUS server.</p> <p><i>key</i> – Specifies that a password and encryption key will be used between the Switch and the Radius server.</p> <p><i>&lt;passwd 32&gt;</i> – The shared-secret key used by the RADIUS server and the Switch. Up to 32 characters can be used.</p> <p><i>default</i> – Uses the default udp port number in both the “auth_port” and “acct_port” settings.</p> <p><i>auth_port &lt;udp_port_number 1-65535&gt;</i> – The UDP port number for authentication requests. The default is 1812.</p> <p><i>acct_port &lt;udp_port_number 1-65535&gt;</i> – The UDP port number for</p>

**config radius add**

accounting requests. The default is 1813.

Restrictions User Account Command Level – Administrator only

Example usage:

To configure the RADIUS server communication settings:

```
DES-3800:admin#config radius add 1 10.48.74.121 key dlink default
Command: config radius add 1 10.48.74.121 key dlink default

Success.

DES-3800:admin#
```

**config radius delete**

Purpose	Used to delete a previously entered RADIUS server configuration.
Syntax	<b>config radius delete &lt;server_index 1-3&gt;</b>
Description	The <b>config radius delete</b> command is used to delete a previously entered RADIUS server configuration.
Parameters	<b>&lt;server_index 1-3&gt;</b> – Assigns a number to the current set of RADIUS server settings. Up to 3 groups of RADIUS server settings can be entered on the Switch.
Restrictions	User Account Command Level – Administrator only

Example usage:

To delete previously configured RADIUS server communication settings:

```
DES-3800:admin#config radius delete 1
Command: config radius delete 1

Success.

DES-3800:admin#
```

**config radius**

Purpose	Used to configure the Switch's RADIUS settings.
Syntax	<b>config radius &lt;server_index 1-3&gt; {ipaddress &lt;server_ip&gt;   key &lt;passwd 32&gt;   auth_port &lt;udp_port_number 1-65535&gt;   acct_port &lt;udp_port_number 1-65535&gt;}</b>
Description	The <b>config radius</b> command is used to configure the Switch's RADIUS settings.
Parameters	<p><b>&lt;server_index 1-3&gt;</b> – Assigns a number to the current set of RADIUS server settings. Up to 3 groups of RADIUS server settings can be entered on the Switch.</p> <p><b>ipaddress &lt;server_ip&gt;</b> – The IP address of the RADIUS server.</p> <p><b>key</b> – Specifies that a password and encryption key will be used between the Switch and the RADIUS server.</p> <ul style="list-style-type: none"> <li><b>&lt;passwd 32&gt;</b> – The shared-secret key used by the RADIUS server and the Switch. Up to 32 characters can</li> </ul>

## config radius

be used.

*auth\_port <udp\_port\_number 1-65535>* – The UDP port number for authentication requests. The default is 1812.

*acct\_port <udp\_port\_number 1-65535>* – The UDP port number for accounting requests. The default is 1813.

Restrictions      User Account Command Level – Administrator only

Example usage:

To configure the RADIUS settings:

```
DES-3800:admin#config radius 1 10.48.74.121 key dlink default
```

```
Command: config radius 1 10.48.74.121 key dlink default
```

```
Success.
```

```
DES-3800:admin#
```

## show radius

Purpose              Used to display the current RADIUS configurations on the Switch.

Syntax             **show radius**

Description        The **show radius** command is used to display the current RADIUS configurations on the Switch.

Parameters        None.

Restrictions       User Account Command Level – Administrator only

Example usage:

To display RADIUS settings on the Switch:

```
DES-3800:admin#show radius
```

```
Command: show radius
```

Index	IP Address	Auth-Port Number	Acct-Port Number	Status	Key
1	10.1.1.1	1812	1813	Active	switch
2	20.1.1.1	1800	1813	Active	des3226
3	30.1.1.1	1812	1813	Active	dlink

```
Total Entries : 3
```

```
DES-3800:admin#
```

## create 802.1x guest\_vlan

Purpose              Used to configure a pre-existing VLAN as a 802.1x Guest VLAN.

Syntax             **create 802.1x guest\_vlan <vlan\_name 32>**

Description        The **create 802.1x guest\_vlan** command is used to configure a pre-defined VLAN as a 802.1x Guest VLAN. Guest 802.1X VLAN clients are those who have not been authorized for 802.1x or they haven't yet installed the necessary 802.1x software, yet would still like limited access rights on the Switch.

**create 802.1x guest\_vlan**

Parameters	<b>&lt;vlan_name 32&gt;</b> - Enter an alphanumeric string of no more than 32 characters to define a pre-existing VLAN as a 802.1x Guest VLAN. This VLAN must have first been created with the <b>create vlan</b> command mentioned earlier in this manual.
Restrictions	User Account Command Level – Administrator and Operator This VLAN is only supported for port-based 802.1x and must have already been previously created using the <b>create vlan</b> command. Only one VLAN can be set as the 802.1x Guest VLAN.

Example usage:

To configure a previously created VLAN as a 802.1x Guest VLAN for the Switch.

```
DES-3800:admin#create 802.1x guest_vlan Trinity
Command: create 802.1x guest_vlan Trinity

Success.

DES-3800:admin#
```

**config 802.1x guest\_vlan ports**

Purpose	Used to configure ports for a pre-existing 802.1x guest VLAN.
Syntax	<b>config 802.1x guest_vlan ports [&lt;portlist&gt;   all] state [enable   disable]</b>
Description	The <b>config 802.1x guest_vlan ports</b> command is used to configure ports to be enabled or disabled for the 802.1x guest VLAN.
Parameters	<b>&lt;portlist&gt;</b> - Specify a port or range of ports to be configured for the 802.1x Guest VLAN.  <b>all</b> – Specify this parameter to configure all ports for the 802.1x Guest VLAN.  <b>state [enable   disable]</b> – Use these parameters to enable or disable port listed here as enabled or disabled for the 802.1x Guest VLAN.
Restrictions	User Account Command Level – Administrator and Operator This VLAN is only supported for port-based 802.1x and must have already been previously created using the <b>create vlan</b> command. If the specific port state changes from an enabled state to a disabled state, these ports will return to the default VLAN.

Example usage:

To configure the ports for a previously created 802.1x Guest VLAN as enabled.

```
DES-3800:admin#config 802.1x guest_vlan ports 1-5 state enable
Command: config 802.1x guest_vlan ports 1-5 state enable

Success.

DES-3800:admin#
```

**show 802.1x guest\_vlan**

Purpose	Used to view the configurations for a 802.1x Guest VLAN.
Syntax	<b>show 802.1x guest_vlan</b>
Description	The <b>show 802.1x guest_vlan</b> command is used to display the

**show 802.1x guest\_vlan**

	settings for the VLAN that has been enabled as an 802.1x Guest VLAN. Guest 802.1X VLAN clients are those who have not been authorized for 802.1x or they haven't yet installed the necessary 802.1x software, yet would still like limited access rights on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator This VLAN is only supported for port-based 802.1x and must have already been previously created using the <b>create vlan</b> command. Only one VLAN can be set as the 802.1x Guest VLAN.

Example usage:

To configure the configurations for a previously created 802.1x Guest VLAN.

```
DES-3800:admin#show 802.1x guest_vlan
```

```
Command: show 802.1x guest_vlan
```

```
Guest VLAN Setting
```

```
-----
Guest VLAN : Trinity
Enable guest VLAN ports: 5-8
```

```
Success.
```

```
DES-3800:admin#
```

**delete 802.1x guest\_vlan**

Purpose	Used to delete a 802.1x Guest VLAN.
Syntax	<b>delete 802.1x guest_vlan {&lt;vlan_name 32&gt;}</b>
Description	The <b>delete 802.1x guest_vlan</b> command is used to delete an 802.1x Guest VLAN. Guest 802.1X VLAN clients are those who have not been authorized for 802.1x or they haven't yet installed the necessary 802.1x software, yet would still like limited access rights on the Switch.
Parameters	<vlan_name 32> - Enter the VLAN name of the Guest 802.1x VLAN to be deleted.
Restrictions	User Account Command Level – Administrator and Operator This VLAN is only supported for port-based 802.1x and must have already been previously created using the <b>create vlan</b> command. Only one VLAN can be set as the 802.1x Guest VLAN.

Example usage:

To delete a previously created 802.1x Guest VLAN.

```
DES-3800:admin#delete 802.1x guest_vlan Trinity
```

```
Command: delete 802.1x guest_vlan Trinity
```

```
Success.
```

```
DES-3800:admin#
```

## MAC-BASED ACCESS CONTROL

The MAC-Based Access Control feature will allow users to configure a list of MAC addresses, either locally or on a remote RADIUS server, to be authenticated by the Switch and given access rights based on the configurations set on the Switch of the target VLAN where these authenticated users are placed.

The Switch will learn MAC addresses of a device through the receipt of ARP packets or DHCP packets and then attempt to match them on the authenticating list. If the client has not been configured for DHCP or does not have an IP configuration in static mode, then MAC addresses cannot be discovered and the client will not be authenticated. Ports and MAC addresses awaiting authentication are placed in the Guest VLAN where the Switch administrator can assign limited rights and privileges.

For local authentication on the Switch, the user must enter a list of MAC addresses to be accepted through this mechanism using the MAC-Based Access Control Local Database Settings window, as seen below. The user may enter up to 1024 MAC addresses locally on the Switch but only sixteen MAC addresses can be accepted per physical MAC-Based Access Control enabled port. Once a MAC address has been authenticated by the Switch on the local side, the port where that MAC address resides will be placed in the previously configured target VLAN, where the rights and privileges are set by the switch administrator. If the VLAN Name for the target VLAN is not found by the Switch, the Switch will return the MAC address to the originating VLAN. If the MAC address is not found, then if the port is in the Guest VLAN, it will remain in the Guest VLAN, with the associated rights. If the port is not in the guest VLAN, this MAC address will be blocked by the Switch.

For remote RADIUS server authentication, the user must first configure the RADIUS server with a list of MAC addresses and relative target VLANs that are to be authenticated on the Switch. Once a MAC address has been discovered by the Switch through ARP or DHCP packets, the Switch will then query the remote RADIUS server with this potential MAC address, using a RADIUS Access Request packet. If a match is made with this MAC address, the RADIUS server will return a notification stating that the MAC address has been accepted and is to be placed in the target VLAN. If the VID for the target VLAN is not found by the Switch, the Switch will create its own MAC-Based Access Control VLAN, named MBA-xx, where the xx is the VID of the first available VLAN ID that can be assigned to this VLAN. If the MAC address is not found, then if the port is in the Guest VLAN, it will remain in the Guest VLAN, with the associated rights. If the port is not in the guest VLAN, this MAC address will be blocked by the Switch.

### Notes About MAC-Based Access Control

There are certain limitations and regulations regarding the MAC-Based Access Control:

1. Once this feature is enabled for a port, the Switch will clear the FDB of that port.
2. If a port is granted clearance for a MAC address within a VLAN that is NOT a Guest VLAN, other MAC addresses on that port must be authenticated for access and otherwise will be blocked by the switch.
3. MAC-Based Access Control is its own entity and is not dependant on other authentication functions on the Switch, such as 802.1X, Web-Based authentication etc...
4. For authenticating VLANs that are not Guest VLANs, a port accepts a maximum of sixteen authenticated MAC addresses per physical port. Other MAC addresses attempting authentication on a port with the maximum number of authenticated MAC addresses will be blocked.
5. Ports that have been enabled for Link Aggregation, stacking, 802.1X authentication, 802.1X Guest VLAN, Port Security, GVRP or Web-Based authentication cannot be enabled for the MAC-Based Authentication.

The MAC-based Access Control commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
enable mac_based_access_control	
disable mac_based_access_control	
config mac_based_access_control	{ports [<portlist>   all] state [enable   disable]   method [local   radius]   password <passwd 16>}
show mac_based_access_control	{ports [<portlist>   all]}
create mac_based_access_control guest_vlan	<vlan_name 32>
config mac_based_access_control guest_vlan ports	<portlist>
delete mac_based_access_control guest_vlan	

Command	Parameters
create mac_based_access_control_local mac	<macaddr> vlan <vlan_name 32>
config mac_based_access_control_local mac	<macaddr> vlan <vlan_name 32>
delete mac_based_access_control_local	[mac <macaddr>   vlan <vlan_name 32>]
show mac_based_access_control_local	{[mac <macaddr>   vlan <vlan_name 32>]}
show mac_based_access_control_auth_mac	{ports <portlist>}

Each command is listed, in detail, in the following sections.

### enable mac\_based\_access\_control

Purpose	Used to enable the MAC-based Access Control on the Switch.
Syntax	<b>enable mac_based_access_control</b>
Description	This command, along with the <b>disable mac_based_access_control</b> command is used to enable and disable MAC-based Access Control globally on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable MAC-based Access Control globally on the Switch.

```
DES-3800:admin#enable mac_based_access_control
Command: enable mac_based_access_control

Success.

DES-3800:admin#
```

### disable mac\_based\_access\_control

Purpose	Used to disable the MAC-based Access Control on the Switch.
Syntax	<b>disable mac_based_access_control</b>
Description	This command, along with the <b>enable mac_based_access_control</b> command is used to enable and disable MAC-based Access Control globally on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable MAC-Based Access Control globally on the Switch.

```
DES-3800:admin#disable mac_based_access_control
Command: disable mac_based_access_control

Success.

DES-3800:admin#
```

**config mac\_based\_access\_control**

Purpose	Used to configure the global parameters of the MAC-based Access Control on the Switch.
Syntax	<b>config mac_based_access_control {ports [&lt;portlist&gt;   all] state [enable   disable]   method [local   radius]   password &lt;passwd 16&gt;}</b>
Description	This command is used to configure the global parameters for the MAC-based access control function on the Switch, including enabled ports, method of authentication and the password to be used to access the remote RADIUS server.
Parameters	<p><i>ports &lt;portlist&gt;</i> - Choose this parameter to configure a list of ports to be enabled for the MAC-based access control function.</p> <p><i>state [enable   disable]</i> – Use the state parameter to enable or disable the previously set ports as MAC-based access control enabled ports.</p> <p><i>method</i> – Use this parameter to choose the type of authentication to be used when authenticating MAC addresses on a given port. The user may choose between the following methods:</p> <ul style="list-style-type: none"> <li>• <i>local</i> – Use this method to utilize the locally set MAC address database as the authenticator for MAC-Based Access Control. This MAC address list can be configured in the MAC-Based Access Control Local Database Settings window.</li> <li>• <i>radius</i> – Use this method to utilize a remote RADIUS server as the authenticator for MAC-Based Access Control. Remember, the MAC list must be previously set on the RADIUS server and the settings for the server must be first configured on the Switch.</li> </ul> <p><i>password &lt;passwd 16&gt;</i> - Use this parameter to enter the password of up to 16 alphanumeric characters for the RADIUS server, which is to be used for packets being sent requesting authentication. The default password is “default”.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure MAC-based Access Control global settings on the Switch.

**DES-3800:admin#config mac\_based\_access\_control ports 1-8 state enable**

**Command: config mac\_based\_access\_control ports 1-8 state enable**

**Success.**

**DES-3800:admin#**

**show mac\_based\_access\_control**

Purpose	Used to display the global MAC-based Access Control settings on the Switch.
Syntax	<b>show mac_based_access_control {ports &lt;portlist&gt;   all}</b>
Description	This command will display the global settings for the MAC-based access control function on the Switch. Entering this command without the related ports will display the global features for this function. Adding the ports will display the currently set running state of that port for the MAC-based access control function.
Parameters	<i>ports</i> – Add this parameter to display the MAC-based access control

## show mac\_based\_access\_control

function state of ports on the switch.

- *<portlist>* - Enter a port or list of ports to be displayed.
- *all* – Choose to display all ports.

Entering this command without any parameters will display the global settings of the MAC\_based access control feature.

Restrictions User Account Command Level – All

Example usage:

To display the global settings for the MAC-based Access Control on the Switch.

```
DES-3800:admin#show mac_based_access_control
Command: show mac_based_access_control
```

### MAC Based Access Control

```
-----
State                : Disabled
Method               : Local
Password             : default
Guest VLAN           :
Guest VLAN Member Ports :
```

```
DES-3800:admin#
```

Example usage:

To display the running state of ports 1-5 for the MAC-based Access Control on the Switch.

```
DES-3800:admin#show mac_based_access_control ports 1-5
Command: show mac_based_access_control ports 1-5
```

```
Port      State
-----
1         Enabled
2         Enabled
3         Enabled
4         Enabled
5         Enabled
```

```
DES-3800:admin#
```

## create mac\_based\_access\_control guest\_vlan

Purpose	Used to configure a previously created Guest VLAN as a MAC-based access control guest VLAN.
Syntax	<b>create mac_based_access_control guest_vlan &lt;vlan_name 32&gt;</b>
Description	This command is used to configure a previously created guest VLAN as a MAC-based access control guest VLAN. This VLAN must have been previously created as first a VLAN, and then a Guest VLAN. Only a VLAN that has been set as a Guest VLAN can be set as a MAC-based access control Guest VLAN.
Parameters	<i>&lt;vlan_name 32&gt;</i> - Enter the name of the previously created Guest VLAN to be nominated as the MAC-based access control Guest VLAN.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure a Guest VLAN as a MAC-based Access Control Guest VLAN.

```
DES-3800:admin#create mac_based_access_control guest_vlan Triton
Command: create mac_based_access_control guest_vlan Triton

Success.

DES-3800:admin#
```

## config mac\_based\_access\_control guest\_vlan

Purpose	Used to set the ports for a previously created MAC-based access control Guest VLAN.
Syntax	<b>config mac_based_access_control guest_vlan ports &lt;portlist&gt;</b>
Description	This command is used to configure ports to be used for MAC-Based Access Control within the Guest VLAN. These ports must have been previously set for the Guest VLAN.
Parameters	<i>ports &lt;portlist&gt;</i> - Enter the ports within the Guest VLAN that will be used for the MAC-based access control feature.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure the ports of a MAC-based Access Control Guest VLAN.

```
DES-3800:admin#config mac_based_access_control guest_vlan ports 1-5
Command: config mac_based_access_control guest_vlan ports 1-5

Success.

DES-3800:admin#
```

## delete mac\_based\_access\_control guest\_vlan

Purpose	Used to delete a MAC-based access control Guest VLAN.
Syntax	<b>delete mac_based_access_control guest_vlan</b>
Description	This command is used to delete a MAC-Based Access Control Guest VLAN.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete a MAC-based Access Control Guest VLAN.

```
DES-3800:admin#delete mac_based_access_control guest_vlan
Command: delete mac_based_access_control guest_vlan

Success.

DES-3800:admin#
```

**create mac\_based\_access\_control\_local mac**

Purpose	Used to set a list of MAC addresses, along with their corresponding target VLAN, which will be authenticated for the Switch
Syntax	<b>create mac_based_access_control_local mac &lt;macaddr&gt; vlan &lt;vlan_name 32&gt;</b>
Description	This command is used to set a list of MAC addresses, along with their corresponding target VLAN, which will be authenticated for the Switch. Once a queried MAC address is matched in this table, it will be placed in the VLAN associated with it here. The switch administrator may enter up to 1024 MAC addresses to be authenticated using the local method configured here.
Parameters	<i>mac &lt;macaddr&gt;</i> - Enter the MAC address which is to be authenticated locally by the Switch, when queried. <i>&lt;vlan_name 32&gt;</i> - Enter the name of the VLAN where this MAC address will be placed after a successful authentication.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enter a MAC address into this local database which is to be locally authenticated by the Switch, and the VLAN where it is to be placed after successful authentication:

```
DES-3800:admin#create mac_based_access_control_local mac 00-01-0A-3B-00-06 vlan Triton
Command: create mac_based_access_control_local mac 00-01-0A-3B-00-06 vlan Triton

Success.

DES-3800:admin#
```

**config mac\_based\_access\_control\_local mac**

Purpose	Used to modify a MAC addresses and its corresponding target VLAN within the local MAC-based access control authentication database.
Syntax	<b>config mac_based_access_control_local mac &lt;macaddr&gt; vlan &lt;vlan_name 32&gt;</b>
Description	This command is modify a MAC addresses and its corresponding target VLAN within the local MAC-based access control authentication database. Once a queried MAC address is matched in this table, it will be placed in the VLAN associated with it here. The switch administrator may enter up to 1024 MAC addresses to be authenticated using the local method configured here.
Parameters	<i>mac &lt;macaddr&gt;</i> - Enter the MAC address which is to be authenticated locally by the Switch, when queried. <i>&lt;vlan_name 32&gt;</i> - Enter the name of the VLAN where this MAC address will be placed after a successful authentication.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To modify a MAC address into this local database which is to be locally authenticated by the Switch, and the VLAN where it is to be placed after successful authentication:

```
DES-3800:admin#config mac_based access_control_local mac 00-01-0A-3B-00-06 vlan default
Command: config mac_based access_control_local mac 00-01-0A-3B-00-06 vlan default

Success.

DES-3800:admin#
```

### delete mac\_based\_access\_control\_local mac

Purpose	Used to delete a MAC addresses from the local MAC-based access control authentication database.
Syntax	<b>delete mac_based access_control_local [mac &lt;macaddr&gt;   vlan &lt;vlan_name 32&gt;]</b>
Description	This command is delete a MAC addresses from the local MAC-based access control authentication database. Once a queried MAC address is matched in this table, it will be placed in the VLAN associated with it here. The switch administrator may enter up to 1024 MAC addresses to be authenticated using the local method configured here.
Parameters	<i>mac &lt;macaddr&gt;</i> - Enter the MAC address which is to be deleted from the local MAC-based access control authentication database. <i>&lt;vlan_name 32&gt;</i> - Enter the name of the VLAN which is to be deleted from the local MAC-Based access control authentication database.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete a MAC address into this local database which is to be locally authenticated by the Switch, and the VLAN where it is to be placed after successful authentication:

```
DES-3800:admin#delete mac_based_access_control_local mac 00-01-0A-3B-00-06
Command: delete mac_based_access_control_local mac 00-01-0A-3B-00-06

Success.

DES-3800:admin#
```

### show mac\_based\_access\_control\_local mac

Purpose	Used to display the local MAC-based access control authentication database.
Syntax	<b>show mac_based_access_control_local {[mac &lt;macaddr&gt;   vlan &lt;vlan_name 32&gt;]}</b>
Description	This command is used to display the local MAC-based access control authentication database.
Parameters	<i>mac &lt;macaddr&gt;</i> - Enter the MAC address within the local MAC-based access control authentication database to be displayed. <i>&lt;vlan_name 32&gt;</i> - Enter the name of the VLAN within the local MAC-based access control authentication database to be displayed, with its corresponding MAC addresses. Entering no parameters will display all entries located in the local MAC-based access control authentication database, along with their corresponding target VLANs.
Restrictions	User Account Command Level – All

Example usage:

To display a MAC address entry located within the local MAC-based access control authentication database.

```
DES-3800:admin#show mac_based_access_control_local mac 00-01-0A-3B-00-06
Command: show mac_based_access_control_local mac 00-01-0A-3B-00-06

MAC Address          VLAN Name
-----
00-01-0A-3B-00-06   Triton

Total Entries: 1

DES-3800:admin#
```

To display MAC address entries located within the local MAC-based access control authentication database by VLAN.

```
DES-3800:admin#show mac_based_access_control_local vlan Triton
Command: show mac_based_access_control_local mac vlan Triton

MAC Address          VLAN Name
-----
00-01-0A-3B-00-06   Triton
00-02-0A-3B-00-02   Triton

Total Entries: 2

DES-3800:admin#
```

To display all MAC address entries located within the local MAC-based access control authentication database.

```
DES-3800:admin#show mac_based_access_control_local
Command: show mac_based_access_control_local

MAC Address          VLAN Name
-----
00-01-0A-3B-00-06   Triton
00-02-0A-3B-00-02   Triton
01-03-0B-3A-00-02   default
00-02-03-4B-01-02   default

Total Entries: 4

DES-3800:admin#
```

## show mac\_based\_access\_control auth\_mac

Purpose	Used to display the MAC-based access control current authentication status.
Syntax	<b>show mac_based_access_control auth_mac {ports &lt;portlist&gt;}</b>
Description	This command is used to display current authentication process of MAC addresses located in the local MAC-based access control authentication database, by port.
Parameters	<i>ports &lt;portlist&gt;</i> - Enter a port or portlist by which to view the current authenticating process of MAC addresses located on that port.
Restrictions	User Account Command Level – All

Example usage:

To display the current authentication process of MAC addresses on port 1.

```
DES-3800:admin#show mac_based_access_control auth_mac
Command: show mac_based_access_control_local auth_mac
```

Port number : 1

Index	MAC Address	Auth State	VLAN Name
1	00-00-01-02-03-A2	Authenticating	default
2	00-03-09-18-10-01	Authenticating	default
3	00-05-5D-ED-84-EA	Authenticating	default
4	00-0D-0B-4E-A0-F7	Authenticating	default
5	00-0D-60-8F-49-38	Authenticating	default
6	00-0E-A6-8E-C1-B7	Authenticating	default
7	00-10-4B-69-F4-AD	Authenticating	default
8	00-11-D8-DA-CE-0B	Authenticating	default

## WEB-BASED ACCESS CONTROL (WAC) COMMANDS

Web-based Access Control is another port based access control method implemented similarly to the 802.1x port based access control method previously stated. This function will allow user authentication through a RADIUS server or through the local username and password set on the Switch when a user is trying to access the network via the Switch, if the port connected to the user is enabled for this feature.

The user attempting to gain web access will be prompted for a username and password before being allowed to accept HTTP packets from the Switch. Once accepted, the user will be placed in the configured VLAN that has been set for Web-based Access Control. If denied access, no packets will pass through to the user and thus, will be prompted for a username and password again.

The Web-based Access Control (WAC) commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
enable wac	
disable wac	
config wac	{vlan <vlan_name 32>   ports [<portlist>   all] state [enable   disable]   method [local   radius]   default_redirpath <string 128>}
create wac user	<username 15> {vlan <vlan_name 32>}
config wac user	<username 15> vlan <vlan_name 32>
delete wac user	<username 15>
show wac user	
show wac	{ports [<portlist>   all]}

Each command is listed, in detail, in the following sections.

### enable wac

Purpose	Used to enable the Web-based Access Control on the Switch.
Syntax	<b>enable wac</b>
Description	This command is used to enable Web-based Access Control globally on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable Web-based Access Control globally on the Switch.

```
DES-3800:admin#enable wac
Command: enable wac

Success.

DES-3800:admin#
```

**disable wac**

Purpose	Used to disable the Web-based Access Control on the Switch.
Syntax	<b>disable wac</b>
Description	This command is used to disable Web-based Access Control globally on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable Web-based Access Control globally on the Switch.

```
DES-3800:admin#disable wac
Command: disable wac
```

Success.

```
DES-3800:admin#
```

**config wac**

Purpose	Used to configure the parameters for the Web-based Access Control feature on this Switch
Syntax	<b>config wac {vlan &lt;vlan_name 32&gt;   ports [&lt;portlist&gt;   all] state [enable   disable]   method [local   radius]   default_redirpath &lt;string 128&gt;}</b>
Description	This command is used to configure the appropriate switch parameters for the Web-based Access Control, including the specification of a VLAN, ports to be enabled for WAC and the method used to authenticate users trying to access the network via the switch
Parameters	<p><i>vlan &lt;vlan_name 32&gt;</i> - Enter the VLAN name which users will be placed when authenticated by the Switch or a RADIUS server. This VLAN should be pre-configured to have limited access rights to web based authenticated users.</p> <p><i>ports</i> – Specify this parameter to add ports to be enabled as Web-based Access Control ports. Only these ports will accept authentication parameters from the user wishing limited access rights through the Switch.</p> <ul style="list-style-type: none"> <li>• <i>&lt;portlist&gt;</i> - Specify a port or range of ports to be set as Web-based Access Control ports.</li> <li>• <i>all</i> – Specify this parameter to set all ports as Web-based Access Control ports.</li> </ul> <p><i>state [enable   disable]</i> – Choose whether to enable or disable the previously set ports and VLAN as Web-based Access Control ports.</p> <p><i>method</i> – Select this parameter to select a method of authentication for users trying to access the network via the switch. There are two options:</p> <ul style="list-style-type: none"> <li>• <i>local</i> – Choose this parameter to use the local authentication method of the Switch as the authenticating method for users trying to access the network via the switch. This is, in fact, the username and password to access the Switch.</li> <li>• <i>radius</i> – Choose this parameter to use a remote RADIUS server as the authenticating method for users trying to access the network via the switch. This RADIUS server must have already been pre-assigned by the administrator using the</li> </ul>

**config wac**

**config radius** commands located in the 802.1x section.

**default\_redirpath** - Enter the URL of the website that authenticated users placed in the VLAN are directed to once authenticated. This path must be entered into this field before the Web-based Access Control can be enabled.

Restrictions

User Account Command Level – Administrator and Operator

The WAC VLAN, ports and method can only be configured separately.

Example usage:

To configure the WAC VLAN:

```
DES-3800:admin#config wac vlan Trinity method local ports 1-5 state
enable default_redirpath http://www.dlink.com
Command: config wac vlan Trinity method local ports 1-5 state enable
default_redirpath http://www.dlink.com
```

Success.

```
DES-3800:admin#
```

Example usage:

To configure the WAC ports:

```
DES-3800:admin#config wac ports 1-7 state enable
Command: config wac ports 1-7 state enable
```

Success.

```
DES-3800:admin#
```

Example usage:

To configure the Web-based Access Control method:

```
DES-3800:admin#config wac method local
Command: config wac method local
```

Success.

```
DES-3800:admin#
```

**NOTE:** To enable the Web-based Access Control function, the redirection path field must have the URL of the website that users will be directed to once they enter the limited resource, pre-configured VLAN. Users which attempt Apply settings without the Redirection Page field set will be prompted with an error message and Web-based Access Control will not be enabled. The URL should follow the form `http(s)://www.dlink.com`

**NOTE:** The subnet of the IP address of the authentication VLAN must be the same as that of the client, or the client will always be denied authentication.

## create wac user

Purpose	Used to create a Web-based Access Control user on the switch
Syntax	<b>create wac user &lt;username 15&gt; {vlan &lt;vlan_name 32&gt;}</b>
Description	This command is used to create a Web-based Access Control user on the Switch.
Parameters	<p><b>&lt;username 15&gt;</b> - Enter a username of up to 15 alphanumeric characters used to authenticate users trying to access the network via the Switch. This username must be identical to the one the user enters to access the Web-based Access Control for the Switch.</p> <p><b>vlan &lt;vlan_name 32&gt;</b> - Enter the VLAN name of the VLAN this user will be placed in, once authenticated.</p>
Restrictions	User Account Command Level – Administrator only

Example usage:

To create a WAC user on the Switch.

```
DES-3800:admin#create wac user Darren vlan Trinity
Command: create wac user Darren vlan Trinity

Success.

DES-3800:admin#
```

## config wac user

Purpose	Used to configure a previously created Web-based Access Control user on the Switch.
Syntax	<b>config wac user &lt;username 15&gt; vlan &lt;vlan_name 32&gt;</b>
Description	This command is used to configure a previously created Web-based Access Control user on the Switch.
Parameters	<p><b>&lt;username 15&gt;</b> - Enter a username of up to 15 alphanumeric characters used to authenticate users trying to access the network via the Switch. This username must be identical to the one the user enters to access the Web-based Access Control for the Switch.</p> <p><b>vlan &lt;vlan_name 32&gt;</b> - Enter the VLAN name of the VLAN this user will be placed in, once authenticated, if a change in VLANs is desired.</p>
Restrictions	User Account Command Level – Administrator only

Example usage:

To configure a WAC user on the Switch.

```
DES-3800:admin#config wac user Peter vlan Trinity
Command: config wac user Peter vlan Trinity

Success.

DES-3800:admin#
```

## show wac user

Purpose	Used to display the parameters for a previously created Web-based Access Control user on the Switch.
Syntax	<b>show wac user</b>
Description	This command is used to display the parameters for a previously created Web-based Access Control user on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator only

Example usage:

To display the parameters for the WAC user:

```
DES-3800:admin#show wac user
Command: show wac user

Current Accounts:
Username      VLAN name
-----
Darren        Trinity

Total Entries : 1

DES-3800:admin#
```

## show wac

Purpose	Used to display the parameters for the Web-based Access Control settings currently configured on the Switch.
Syntax	<b>show wac {ports [&lt;portlist&gt;   all]}</b>
Description	This command is used to display the parameters for the Web-based Access Control settings currently configured on the Switch.
Parameters	<p><i>ports &lt;portlist&gt;</i> - Use this parameter to define ports to be viewed for their Web-based Access Control settings.</p> <p><i>all</i> – Use this parameter to display all ports for their Web-based Access Control settings.</p> <p>Entering no parameters will display the remaining parameters of state, authentication method and Web-based Access Control VLAN currently set on the Switch.</p>
Restrictions	User Account Command Level – Administrator only

Example usage:

To display the WAC parameters

```
DES-3800:admin#show wac
Command: show wac
```

#### Web Access Control

```
-----
State      : Enable
Method     : RADIUS
VLAN       : Trinity
Redir Path :
```

```
DES-3800:admin#
```

Example usage:

To display the WAC enabled ports:

```
DES-3800:admin#show wac ports 1-10
```

```
Command: show wac ports 1-10
```

Port	State	Username	IP address	Auth status	Assigned Vlan

**NOTE:** A successful authentication should direct the client to the stated web page. If the client does not reach this web page, yet does not receive a **Fail!** message, the client will already be authenticated and therefore should refresh the current browser window or attempt to open a different web page.

## ACCESS CONTROL LIST (ACL) COMMANDS

The xStack DES-3800 switch series implements Access Control Lists that enable the Switch to deny or permit network access to specific devices or device groups based on IP settings, MAC address, and packet content.

Command	Parameters
create access_profile	[ethernet {vlan   source_mac <macmask>   destination_mac <macmask>   802.1p   ethernet_type}   ip {vlan   source_ip_mask <netmask>   destination_ip_mask <netmask>   dscp   [icmp {type   code}   igmp {type}   tcp {src_port_mask <hex 0x0-0xffff>   dst_port_mask <hex 0x0-0xffff>   flag_mask [all   {urg   ack   psh   rst   syn   fin}]}   udp {src_port_mask <hex 0x0-0xffff>   dst_port_mask <hex 0x0-0xffff>   protocol_id {user_mask <hex 0x0-0xffffffff> }]}   packet_content_mask {offset_0-15 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_16-31 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_32-47 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_48-63 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> }]} [profile_id <value 1-255>]
delete access_profile profile_id	[profile_id <value 1-255>   all]
config access_profile profile_id	<value 1-255> [add access_id [auto_assign   <value 1-65535>] [ethernet {vlan <vlan_name 32>   source_mac <macaddr>   destination_mac <macaddr>   802.1p <value 0-7>   ethernet_type <hex 0x0-0xffff> }   ip {vlan <vlan_name 32>   source_ip <ipaddr>   destination_ip <ipaddr>   dscp <value 0-63>   [icmp {type <value 0-255> code <value 0-255>}   igmp {type <value 0-255>}   tcp {src_port <value 0-65535>   dst_port <value 0-65535>   flag_mask [all   {urg   ack   psh   rst   syn   fin}]}   udp {src_port <value 0-65535>   dst_port <value 0-65535>   protocol_id <value 0 - 255> {user_define <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> }]}   packet_content_mask {offset_0-15 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_16-31 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_32-47 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_48-63 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> }]} port <portlist> [permit {priority <value 0-7> {replace_priority}   replace_dscp_with <value 0-63>}   deny   mirror]   delete access_id <value 1-65535>]
show access_profile	profile_id <value 1-255>
create cpu access_profile	[ethernet {vlan   source_mac <macmask>   destination_mac <macmask>   ethernet_type}   ip {vlan   source_ip_mask <netmask>   destination_ip_mask <netmask>   dscp   [icmp {type   code}   igmp {type}   tcp {src_port_mask <hex 0x0-0xffff>   dst_port_mask <hex 0x0-0xffff>   flag_mask [all   {urg   ack   psh   rst   syn   fin}]}   udp {src_port_mask <hex 0x0-0xffff>   dst_port_mask <hex 0x0-0xffff>   protocol_id {user_mask <hex 0x0-0xffffffff> }]}   packet_content_mask {offset 0-15 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset 16-31 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset 32-47 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset 48-63 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset 64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> }]} [profile_id <value 1-5>]
delete cpu access_profile	profile_id <value 1-5>

Command	Parameters
config cpu access_profile profile_id	<value 1-5> [add access_id <value 1-65535> [ethernet {vlan <vlan_name 32>   source_mac <macaddr>   destination_mac <macaddr>   ethernet_type <hex 0x0-0xffff>} [permit   deny]   ip {vlan <vlan_name 32>   source_ip <ipaddr>   destination_ip <ipaddr>   dscp <value 0-63>   icmp {type <value 0-255> code <value 0-255>}   igmp {type <value 0-255>}   tcp {src_port <value 0-65535>   dst_port <value 0-65535>   {urg   ack   psh   rst   syn   fin}}   udp {src_port <value 0-65535>   dst_port <value 0-65535>}   protocol_id <value 0 - 255> {user_define <hex 0x0-0xffffffff>}}] [permit   deny]   packet_content {offset_0-15 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_16-31 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_32-47 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_48-63 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>} [permit   deny]   delete access_id <value 1-65535>]
enable cpu interface_filtering	
disable cpu_interface_filtering	
show cpu_interface_filtering	
show cpu access_profile	{profile_id <value 1-5> {access_id <value 1-65535>}}

Access profiles allow you to establish criteria to determine whether or not the Switch will forward packets based on the information contained in each packet's header. These criteria can be specified on a VLAN-by-VLAN basis.

Creating an access profile is divided into two basic parts. First, an access profile must be created using the **create access\_profile** command. For example, if you want to deny all traffic to the subnet 10.42.73.0 to 10.42.73.255, you must first **create** an access profile that instructs the Switch to examine all of the relevant fields of each frame:

**create access\_profile ip source\_ip\_mask 255.255.255.0 profile\_id 1**

Here we have created an access profile that will examine the IP field of each frame received by the Switch. Each source IP address the Switch finds will be combined with the **source\_ip\_mask** with a logical AND operation. The **profile\_id** parameter is used to give the access profile an identifying number – in this case, **1**. The **deny** parameter instructs the Switch to filter any frames that meet the criteria – in this case, when a logical AND operation between an IP address specified in the next step and the **ip\_source\_mask** match.

The default for an access profile on the Switch is to **permit** traffic flow. If you want to restrict traffic, you must use the **deny** parameter.

Now that an access profile has been created, you must add the criteria the Switch will use to decide if a given frame should be forwarded or filtered. Here, we want to filter any packets that have an IP source address between 10.42.73.0 and 10.42.73.255:

**config access\_profile profile\_id 1 add access\_id 1 ip source\_ip 10.42.73.1 port 1 deny**

Here we use the **profile\_id 1** which was specified when the access profile was created. The **add** parameter instructs the Switch to add the criteria that follows to the list of rules that are associated with access profile 1. For each rule entered into the access profile, you can assign an **access\_id** that both identifies the rule and establishes a priority within the list of rules. A lower **access\_id** gives the rule a higher priority. In case of a conflict in the rules entered for an access profile, the rule with the highest priority (lowest **access\_id**) will take precedence.

The **ip** parameter instructs the Switch that this new rule will be applied to the IP addresses contained within each frame's header. **source\_ip** tells the Switch that this rule will apply to the source IP addresses in each frame's header. Finally, the IP address **10.42.73.1** will be combined with the **source\_ip\_mask 255.255.255.0** to give the IP address 10.42.73.0 for any source IP address between 10.42.73.0 to 10.42.73.255.

In the example used above - config access\_profile profile\_id 1 add access\_id 1 ip source\_ip 10.42.73.1 port 7 deny – a single access rule was created. This rule will subtract one rule available for the port group 1 – 8, as well as one rule from the total available rules.

In order to address this functional limitation of the chip set, an additional function, **CPU Interface Filtering**, has been added. CPU Filtering may be universally enabled or disabled. Setting up CPU Interface Filtering follows the same syntax as ACL configuration and requires some of the same input parameters. To configure CPU Interface Filtering, see the descriptions below for **create cpu access\_profile** and **config cpu access\_profile**. To enable CPU Interface Filtering, see **config cpu\_interface\_filtering**. The xStack DES-3800 switch series has three ways of creating access profile entries on the Switch which include **Ethernet** (MAC Address), **IP**, and **Packet Content**. Due to the present complexity of the access profile commands, it has been decided to split this command into three pieces to be better understood by the user and therefore simpler for the user to configure. The beginning of this section displays

the **create access\_profile** and **config access\_profile** commands in their entirety. The following table divides these commands up into the defining features necessary to properly configure the access profile. Remember these are not the total commands but the easiest way to implement Access Control Lists for the Switch.

Command	Parameters
create access_profile	[ethernet {vlan   source_mac <macmask>   destination_mac <macmask>   802.1p   ethernet_type} profile_id <value 1-255>]
config access_profile profile_id	<value 1-255> [add access_id [auto_assign   <value 1-65535>] [ethernet {vlan <vlan_name 32>   source_mac <macaddr>   destination_mac <macaddr>   802.1p <value 0-7>   ethernet_type <hex 0x0-0xffff>} port <portlist> [permit {priority <value 0-7> {replace_priority}}   deny   mirror] delete <value 1-65535>]
create access_profile	ip [vlan   source_ip_mask <netmask>   destination_ip_mask <netmask>   dscp   [icmp {type   code}   igmp {type}   tcp {src_port_mask <hex 0x0-0xffff>   dst_port_mask <hex 0x0-0xffff>   flag_mask [all   {urg   ack   psh   rst   syn   fin}]]   udp {src_port_mask <hex 0x0-0xffff>   dst_port_mask <hex 0x0-0xffff>}   protocol_id {user_mask <hex 0x0-0xffffffff>}] profile_id <value 1-255>]
config access_profile profile_id	<value 1-255> [add access_id [auto_assign   <value 1-65535>] ip {vlan <vlan_name 32>   source_ip <ipaddr>   destination_ip <ipaddr>   dscp <value 0-63>   [icmp {type <value 0-255>   code <value 0-255>}   igmp {type <value 0-255>}   tcp {src_port <value 0-65535>   dst_port <value 0-65535>   urg   ack   psh   rst   syn   fin}   udp {src_port <value 0-65535>   dst_port <value 0-65535>}   protocol_id <value 0 - 255> {user_define <hex 0x0-0xffffffff> }}] port <portlist> [permit {priority <value 0-7> {replace_priority}}   replace_dscp <value 0-63>}   deny   mirror] delete <value 1-65535>]
create access_profile	packet_content_mask {offset_0-15 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_16-31 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_32-47 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_48-63 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>} profile_id <value 1-255>]
config access_profile profile_id	<value 1-255> [add access_id [auto_assign   <value 1-65535>] packet_content {offset_0-15 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_16-31 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_32-47 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_48-63 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset_64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>} port <portlist> [permit {priority <value 0-7> {replace_priority}}   replace_dscp <value 0-63>}   deny   mirror] delete <value 1-65535>]

Each command is listed, in detail, in the following sections.

### create access\_profile (for Ethernet)

Purpose	Used to create an access profile on the Switch by examining the Ethernet part of the packet header. Masks entered can be combined with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the <b>config access_profile</b> command, below.
Syntax	<b>create access_profile [ethernet {vlan   source_mac &lt;macmask&gt;   destination_mac &lt;macmask&gt;   802.1p   ethernet_type} profile_id &lt;value 1-255&gt;]</b>
Description	This command will allow the user to create a profile for packets that may be accepted or denied by the Switch by examining the Ethernet part of the packet header. Specific values for rules pertaining to the Ethernet part of the packet header may be defined by configuring the <b>config access_profile</b> command for Ethernet, as stated below.

## create access\_profile (for Ethernet)

Parameters	<p><i>ethernet</i> - Specifies that the Switch will examine the layer 2 part of each packet header with emphasis on one or more of the following:</p> <ul style="list-style-type: none"> <li><i>vlan</i> – Specifies that the Switch will examine the VLAN part of each packet header.</li> <li><i>source_mac &lt;macmask&gt;</i> – Specifies a MAC address mask for the source MAC address. This mask is entered in the following hexadecimal format: 000000000000-FFFFFFFFFFFF</li> <li><i>destination_mac &lt;macmask&gt;</i> – Specifies a MAC address mask for the destination MAC address in the following format: 000000000000-FFFFFFFFFFFF</li> <li><i>802.1p</i> – Specifies that the Switch will examine the 802.1p priority value in the frame's header.</li> <li><i>ethernet_type</i> – Specifies that the Switch will examine the Ethernet type value in each frame's header.</li> </ul> <p><i>profile_id &lt;value 1-255&gt;</i> - Specifies an index number between 1 and 255 that will identify the access profile being created with this command.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To create a Ethernet access profile:

```
DES-3800:admin#create access_profile ethernet vlan 802.1p profile_id 1
Command: create access_profile ethernet vlan 802.1p profile_id 1

Success.

DES-3800:admin#
```

## config access\_profile profile\_id (for Ethernet)

Purpose	Used to configure the Ethernet access profile on the Switch and to define specific values for the rules that will be used to by the Switch to determine if a given packet should be forwarded or filtered. Masks entered using the <b>create access_profile</b> command will be combined, using a logical AND operational method, with the values the Switch finds in the specified frame header fields.
Syntax	<b>config access_profile profile_id &lt;value 1-255&gt; [add access_id [auto_assign   &lt;value 1-65535&gt;] [ethernet {vlan &lt;vlan_name 32&gt;   source_mac &lt;macaddr&gt;   destination_mac &lt;macaddr&gt;   802.1p &lt;value 0-7&gt;   ethernet_type &lt;hex 0x0-0xffff&gt;} port &lt;port&gt; [permit {priority &lt;value 0-7&gt; {replace_priority}}   replace_dscp &lt;value 0-63&gt; }   deny   mirror] delete &lt;value 1-65535&gt;]</b>
Description	This command is used to define the rules used by the Switch to either filter or forward packets based on the Ethernet part of each packet header.
Parameters	<p><i>profile_id &lt;value 1-255&gt;</i> - Enter an integer between 1 and 255 that is used to identify the access profile that will be configured with this command. This value is assigned to the access profile when it is created with the <b>create access_profile</b> command. The lower the profile ID, the higher the priority the rule will be given.</p> <p><i>add access_id</i> - Adds an additional rule to the above specified access profile.</p> <ul style="list-style-type: none"> <li><i>auto_assign</i> – Adding this parameter will automatically assign an access_id to identify the rule.</li> <li><i>&lt;value 1-65535&gt;</i> - The value specifies the relative priority of the additional rule. Up to 65535 different rules may be configured for the Ethernet access profile.</li> </ul> <p><i>ethernet</i> - Specifies that the Switch will look only into the layer 2 part of each packet to determine if it is to be filtered or forwarded based on one or more of the</p>

**config access\_profile profile\_id (for Ethernet)**

following:

- *vlan* <vlan\_name 32> – Specifies that the access profile will apply to only this previously created VLAN.
- *source\_mac* <macaddr> – Specifies that the access profile will apply to only packets with this source MAC address. MAC address entries may be made in the following format: **000000000000-FFFFFFFFFFFF**
- *destination\_mac* <macaddr> – Specifies that the access profile will apply to only packets with this destination MAC address. MAC address entries may be made in the following format: **000000000000-FFFFFFFFFFFF**
- *802.1p* <value 0-7> – Specifies that the access profile will apply only to packets with this 802.1p priority value.
- *ethernet\_type* <hex 0x0-0xffff> – Specifies that the access profile will apply only to packets with this hexadecimal 802.1Q Ethernet type value in the packet header.

*port* <portlist> - The access profile for Ethernet may be defined for each port on the Switch by entering a port or range of ports here. Up to 65535 rules may be configured for each port.

*permit* – Specifies that packets that match the access profile are permitted to be forwarded by the Switch.

- *priority* <value 0-7> – This parameter is specified to re-write the 802.1p default priority previously set in the Switch, which is used to determine the CoS queue to which packets are forwarded to. Once this field is specified, packets accepted by the Switch that match this priority are forwarded to the CoS queue specified previously by the user.
- *{replace\_priority}* – Enter this parameter if you want to re-write the 802.1p default priority of a packet to the value entered in the Priority field, which meets the criteria specified previously in this command, before forwarding it on to the specified CoS queue. Otherwise, a packet will have its incoming 802.1p user priority re-written to its original value before being forwarded by the Switch.

*replace\_dscp* <value 0-63> – Allows you to specify a value to be written to the DSCP field of an incoming packet that meets the criteria specified in the first part of the command. This value will over-write the value in the DSCP field of the packet.

*deny* – Specifies that packets that match the access profile are not permitted to be forwarded by the Switch and will be filtered.

*mirror* - Selecting *mirror* specifies that packets that match the access profile are mirrored to a port defined in the **config mirror port** command. Port Mirroring must be enabled and a target port must be set. Remember, Port Mirroring cannot cross-box, that is they cannot span across switches in a switch stack.

*delete access\_id* <value 1-65535> – Use this command to delete a specific rule from the Ethernet profile. Up to 65535 rules may be specified for the Ethernet access profile.

Restrictions

User Account Command Level – Administrator and Operator

Example usage:

To configure a rule for the Ethernet access profile:

```
DES-3800:admin#config access profile profile_id 1 add access_id 1 ethernet vlan
Trinity 802.1p 1 port 1 permit priority 1 replace priority
Command: config access profile profile_id 1 add access_id 1 ethernet vlan Trinity
802.1p 1 port 1 permit priority 1 replace priority

Success.

DES-3800:admin#
```

## create access\_profile (IP)

Purpose	Used to create an access profile on the Switch by examining the IP part of the packet header. Masks entered can be combined with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the <b>config access_profile</b> command, below.
Syntax	<b>create access_profile ip {vlan   source_ip_mask &lt;netmask&gt;   destination_ip_mask &lt;netmask&gt;   dscp   [icmp {type   code}   igmp {type}   tcp {src_port_mask &lt;hex 0x0-0xffff&gt;   dst_port_mask &lt;hex 0x0-0xffff&gt;   flag_mask [all   {urg   ack   psh   rst   syn   fin}]}   udp {src_port_mask &lt;hex 0x0-0xffff&gt;   dst_port_mask &lt;hex 0x0-0xffff&gt;   protocol_id_mask {user_define_mask &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt;}}] profile_id &lt;value 1-255&gt;}</b>
Description	This command will allow the user to create a profile for packets that may be accepted or denied by the Switch by examining the IP part of the packet header. Specific values for rules pertaining to the IP part of the packet header may be defined by configuring the <b>config access_profile</b> command for IP, as stated below.
Parameters	<p><i>ip</i> - Specifies that the Switch will look into the IP fields in each packet with special emphasis on one or more of the following:</p> <ul style="list-style-type: none"> <li><i>vlan</i> – Specifies a VLAN mask.</li> <li><i>source_ip_mask &lt;netmask&gt;</i> – Specifies an IP address mask for the source IP address.</li> <li><i>destination_ip_mask &lt;netmask&gt;</i> – Specifies an IP address mask for the destination IP address.</li> <li><i>dscp</i> – Specifies that the Switch will examine the DiffServ Code Point (DSCP) field in each frame's header.</li> <li><i>icmp</i> – Specifies that the Switch will examine the Internet Control Message Protocol (ICMP) field in each frame's header. <ul style="list-style-type: none"> <li><b>type</b> – Specifies that the Switch will examine each frame's ICMP Type field.</li> <li><b>code</b> – Specifies that the Switch will examine each frame's ICMP Code field.</li> </ul> </li> <li><i>igmp</i> – Specifies that the Switch will examine each frame's Internet Group Management Protocol (IGMP) field. <ul style="list-style-type: none"> <li><b>type</b> – Specifies that the Switch will examine each frame's IGMP Type field.</li> </ul> </li> <li><i>tcp</i> – Specifies that the Switch will examine each frames Transport Control Protocol (TCP) field. <ul style="list-style-type: none"> <li><b>src_port_mask &lt;hex 0x0-0xffff&gt;</b> – Specifies a TCP port mask for the source port.</li> <li><b>dst_port_mask &lt;hex 0x0-0xffff&gt;</b> – Specifies a TCP port mask for the destination port.</li> <li><b>flag_mask [all   {urg   ack   psh   rst   syn   fin}]</b> – Enter the appropriate flag_mask parameter. All incoming packets have TCP port numbers contained in them as the forwarding criterion. These numbers have flag bits associated with them which are parts of a packet that determine what to do with the packet. The user may deny packets by denying certain flag bits within the packets. The user may choose between <i>all</i>, <i>urg</i> (urgent), <i>ack</i> (acknowledgement), <i>psh</i> (push), <i>rst</i> (reset), <i>syn</i> (synchronize) and <i>fin</i> (finish).</li> </ul> </li> <li><i>udp</i> – Specifies that the Switch will examine each frame's User Datagram Protocol (UDP) field. <ul style="list-style-type: none"> <li><b>src_port_mask &lt;hex 0x0-0xffff&gt;</b> – Specifies a UDP port mask</li> </ul> </li> </ul>

## create access\_profile (IP)

for the source port.

- **dst\_port\_mask <hex 0x0-0xffff>** – Specifies a UDP port mask for the destination port.
- **protocol\_id\_mask** – Specifies that the Switch will examine each frame's Protocol ID field.
- **user\_define\_mask <hex 0x0-0xffffffff>** – Enter a hexadecimal value that will identify the protocol to be discovered in the packet header.

**profile\_id <value 1-255>** - Specifies an index number between 1 and 255 that will identify the access profile being created with this command.

Restrictions User Account Command Level – Administrator and Operator

Example usage:

To configure a rule for the IP access profile:

```
DES-3800:admin#create access_profile ip protocol_id profile_id 2
```

```
Command: create access_profile ip protocol_id profile_id 2
```

Success.

```
DES-3800:admin#
```

## config access\_profile profile\_id (IP)

Purpose	Used to configure the IP access profile on the Switch and to define specific values for the rules that will be used to by the Switch to determine if a given packet should be forwarded or filtered. Masks entered using the <b>create access_profile</b> command will be combined, using a logical AND operational method, with the values the Switch finds in the specified frame header fields.
Syntax	<b>config access_profile profile_id &lt;value 1-255&gt; [add access_id [auto_assign   &lt;value 1-65535&gt;] ip {vlan &lt;vlan_name 32&gt;   source_ip &lt;ipaddr&gt;   destination_ip &lt;ipaddr&gt;   dscp &lt;value 0-63&gt;   [icmp {type &lt;value 0-255&gt; code &lt;value 0-255&gt;}   igmp {type &lt;value 0-255&gt;}   tcp {src_port &lt;value 0-65535&gt;   dst_port &lt;value 0-65535&gt;   urg   ack   psh   rst   syn   fin}   udp {src_port &lt;value 0-65535&gt;   dst_port &lt;value 0-65535&gt;}   protocol_id &lt;value 0 - 255&gt; {user_define &lt;hex 0x0-0xffffffff&gt;&lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt;}}] port &lt;port&gt; [permit {priority &lt;value 0-7&gt; {replace_priority}   replace_dscp &lt;value 0-63&gt;}   deny   mirror] delete &lt;value 1-65535&gt;]</b>
Description	This command is used to define the rules used by the Switch to either filter or forward packets based on the IP part of each packet header.
Parameters	<p><b>profile_id &lt;value 1-255&gt;</b> - Enter an integer between 1 and 255 that is used to identify the access profile that will be configured with this command. This value is assigned to the access profile when it is created with the <b>create access_profile</b> command. The lower the profile ID, the higher the priority the rule will be given.</p> <p><b>add access_id</b> - Adds an additional rule to the above specified access profile.</p> <ul style="list-style-type: none"> <li>• <b>auto_assign</b> – Adding this parameter will automatically assign an access_id to identify the rule.</li> <li>• <b>&lt;value 1-65535&gt;</b> - The value specifies the relative priority of the additional rule. Up to 65535 different rules may be configured for the Ethernet access profile.</li> </ul> <p><b>ip</b> – Specifies that the Switch will look into the IP fields in each packet to see if it will be either forwarded or filtered based on one or more of the following:</p> <ul style="list-style-type: none"> <li>• <b>vlan &lt;vlan_name 32&gt;</b> – Specifies that the access profile will apply to only to this VLAN.</li> </ul>

**config access\_profile profile\_id (IP)**

- *source\_ip* <ipaddr> – Specifies that the access profile will apply to only packets with this source IP address.
- *destination\_ip* <ipaddr> – Specifies that the access profile will apply to only packets with this destination IP address.
- *dscp* <value 0-63> – Specifies that the access profile will apply only to packets that have this value in their Type-of-Service (DiffServ code point, DSCP) field in their IP packet header.
- *icmp* – Specifies that the Switch will examine the Internet Control Message Protocol (ICMP) field within each packet.
  - *type* <value 0-255> – Specifies that the access profile will apply to this ICMP type defined by a value between 0 and 255.
  - *code* <value 0-255> – Specifies that the access profile will apply to this ICMP code defined by a value between 0 and 255.
- *igmp* – Specifies that the Switch will examine the Internet Group Management Protocol (IGMP) field within each packet.
  - *type* <value 0-255> – Specifies that the access profile will apply to packets that have this IGMP type defined by a value between 0 and 255.
- *tcp* – Specifies that the Switch will examine the Transmission Control Protocol (TCP) field within each packet.
  - *src\_port* <value 0-65535> – Specifies that the access profile will apply only to packets that have this TCP source port in their TCP header.
  - *dst\_port* <value 0-65535> – Specifies that the access profile will apply only to packets that have this TCP destination port in their TCP header.
- *flag\_mask* – Enter the type of TCP flag to be masked. The choices are:
  - *urg*: TCP control flag (urgent)
  - *ack*: TCP control flag (acknowledgement)
  - *psh*: TCP control flag (push)
  - *rst*: TCP control flag (reset)
  - *syn*: TCP control flag (synchronize)
  - *fin*: TCP control flag (finish)
- *udp* – Specifies that the Switch will examine the User Datagram Protocol (UDP) field in each packet.
  - *src\_port* <value 0-65535> – Specifies that the access profile will apply only to packets that have this UDP source port in their header.
  - *dst\_port* <value 0-65535> – Specifies that the access profile will apply only to packets that have this UDP destination port in their header.
- *protocol\_id* <value 0-255> – Specifies that the Switch will examine the Protocol field in each packet and if this field contains the value entered here, apply the appropriate rules.
  - *user\_define* <hex 0x0-0xffffffff> – Enter a hexadecimal value that will identify the protocol to be discovered in the packet header.

*port* <portlist> - The access profile for IP may be defined for each port on the Switch. Up to 65535 rules may be configured for each port.

*permit* – Specifies that packets that match the access profile are permitted to be forwarded by the Switch.

- *priority* <value 0-7> – This parameter is specified to re-write the 802.1p default priority previously set in the Switch, which is used to determine to which CoS queue packets are forwarded. Once this field is specified, packets accepted by the Switch that match this priority are forwarded to the CoS queue specified previously by the user.
- *{replace\_priority}* – Enter this parameter to re-write the 802.1p default priority of a packet to the value entered in the Priority field, which meets the criteria specified previously in this command, before forwarding it on to the specified

**config access\_profile profile\_id (IP)**

CoS queue. Otherwise, a packet will have its incoming 802.1p user priority re-written to its original value before being forwarded by the Switch.

*replace\_dscp <value 0-63>* – Allows you to specify a value to be written to the DSCP field of an incoming packet that meets the criteria specified in the first part of the command. This value will over-write the value in the DSCP field of the packet.

*deny* – Specifies that packets that match the access profile are not permitted to be forwarded by the Switch and will be filtered.

*mirror* - Selecting *mirror* specifies that packets that match the access profile are mirrored to a port defined in the **config mirror port** command. Port Mirroring must be enabled and a target port must be set. Remember, Port Mirroring cannot cross-box, that is they cannot span across switches in a switch stack.

*delete access\_id <value 1-65535>* – Use this command to delete a specific rule from the IP profile. Up to 65535 rules may be specified for the IP access profile.

Restrictions      User Account Command Level – Administrator and Operator

Example usage:

To configure a rule for the IP access profile:

```
DES-3800:admin#config access_profile profile_id 2 add access_id 2 ip
protocol_id 2 port 1 deny
Command: config access_profile profile_id 2 add access_id 2 ip
protocol_id 2 port 1 deny

Success.

DES-3800:admin#
```

**create access\_profile (packet content mask)**

Purpose	Used to create an access profile on the Switch by examining the Ethernet part of the packet header. Packet content masks entered will specify certain bytes of the packet header to be identified by the Switch. When the Switch recognizes a packet with the identical byte as the one configured, it will either forward or filter the packet, based on the users command. Specific values for the rules are entered using the <b>config access_profile</b> command, below.
Syntax	<b>create access_profile packet_content_mask {offset_0-15 &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt;   offset_16-31 &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt;   offset_32-47 &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt;   offset_48-63 &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt;   offset_64-79 &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; &lt;hex 0x0-0xffffffff&gt; } profile_id &lt;value 1-255&gt;}</b>
Description	This command is used to identify packets by examining the Ethernet packet header, by byte and then decide whether to filter or forward it, based on the user's configuration. The user will specify which bytes to examine by entering them into the command, in hex form, and then selecting whether to filter or forward them, using the <b>config access_profile</b> command.
Parameters	<p><i>packet_content_mask</i> – Specifies that the Switch will mask the packet header beginning with the offset value specified as follows:</p> <ul style="list-style-type: none"> <li><i>offset_0-15</i> – Enter a value in hex form to mask the packet from the beginning of the packet to the 15th byte.</li> <li><i>offset_16-31</i> - Enter a value in hex form to mask the packet from byte 16 to byte 31.</li> <li><i>offset_32-47</i> - Enter a value in hex form to mask the packet from byte 32 to byte 47.</li> </ul>

**create access\_profile (packet content mask)**

- *offset\_48-63* - Enter a value in hex form to mask the packet from byte 48 to byte 63.
- *offset\_64-79* - Enter a value in hex form to mask the packet from byte 64 to byte 79.

*profile\_id* <value 1-255> - Specifies an index number between 1 and 255 that will identify the access profile being created with this command.

Restrictions

User Account Command Level – Administrator and Operator

Example usage:

To create an Access profile by packet content mask:

```
DES-3800:admin#create access_profile packet_content_mask offset_0-15
0xFFFFFFFF 0xFFFFFFFF 0xFFFFFFFF 0xFFFFFFFF offset_16-31 0xFFFF
0xFFFF0000 0xF 0xF000000 profile_id 3
Command: create access_profile packet_content_mask offset_0-15
0xFFFFFFFF 0xFFFFFFFF 0xFFFFFFFF 0xFFFFFFFF offset_16-31 0xFFFF
0xFFFF0000 0xF 0xF000000 profile_id 3
```

Success.

```
DES-3800:admin#
```

**config access\_profile profile\_id (packet content mask)**

Purpose	To configure the rule for a previously created access profile command based on the packet content mask. Packet content masks entered will specify certain bytes of the packet header to be identified by the Switch. When the Switch recognizes a packet with the identical byte as the one configured, it will either forward or filter the packet, based on the users command entered here.
Syntax	<b>config access_profile profile_id</b> <value 1-8> [ <b>add access_id</b> <value 1-65535> <b>packet_content_mask</b> { <b>offset_0-15</b> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   <b>offset_16-31</b> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   <b>offset_32-47</b> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   <b>offset_48-63</b> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   <b>offset_64-79</b> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> } <b>port</b> <port> [ <b>permit</b> { <b>priority</b> <value 0-7> { <b>replace_priority</b> }   <b>replace_dscp</b> <value 0-63> }   <b>deny</b>   <b>mirror</b> ] <b>delete access_id</b> <value 1-65535>]
Description	This command is used to set the rule for a previously configured access profile setting based on packet content mask. These rules will determine if the Switch will forward or filter the identified packets, based on user configuration specified in this command. Users will set bytes to identify by entering them in hex form, offset from the first byte of the packet.
Parameters	<p><i>profile_id</i> &lt;value 1-255&gt; - Enter an integer between 1 and 255 that is used to identify the access profile that will be configured with this command. This value is assigned to the access profile when it is created with the <b>create access_profile</b> command. The lower the profile ID, the higher the priority the rule will be given.</p> <p><i>add access_id</i> - Adds an additional rule to the above specified access profile.</p> <ul style="list-style-type: none"> <li>• <i>auto_assign</i> – Adding this parameter will automatically assign an access_id to identify the rule.</li> <li>• &lt;value 1-65535&gt; - The value specifies the relative priority of the additional rule. Up to 65535 different rules may be configured for the Ethernet access profile.</li> </ul> <p><i>packet_content</i> – Specifies that the Switch will mask the packet header beginning</p>

**config access\_profile profile\_id (packet content mask)**

with the offset value specified as follows:

- *offset\_0-15* – Enter a value in hex form to mask the packet from the beginning of the packet to the 15th byte.
- *offset\_16-31* – Enter a value in hex form to mask the packet from byte 16 to byte 31.
- *offset\_32-47* – Enter a value in hex form to mask the packet from byte 32 to byte 47.
- *offset\_48-63* – Enter a value in hex form to mask the packet from byte 48 to byte 63.
- *offset\_64-79* – Enter a value in hex form to mask the packet from byte 64 to byte 79.

*port <portlist>* – The access profile for the packet content mask may be defined for each port on the Switch. Up to 65535 rules may be configured for each port.

*permit* – Specifies that packets that match the access profile are permitted to be forwarded by the Switch.

- *priority <value 0-7>* – This parameter is specified if you want to re-write the 802.1p default priority previously set in the Switch, which is used to determine the CoS queue to which packets are forwarded to. Once this field is specified, packets accepted by the Switch that match this priority are forwarded to the CoS queue specified previously by the user.
- *{replace\_priority}* – Enter this parameter if you want to re-write the 802.1p default priority of a packet to the value entered in the Priority field, which meets the criteria specified previously in this command, before forwarding it on to the specified CoS queue. Otherwise, a packet will have its incoming 802.1p user priority re-written to its original value before being forwarded by the Switch.

*replace\_dscp <value 0-63>* – Allows you to specify a value to be written to the DSCP field of an incoming packet that meets the criteria specified in the first part of the command. This value will over-write the value in the DSCP field of the packet.

*deny* – Specifies that packets that match the access profile are not permitted to be forwarded by the Switch and will be filtered.

*mirror* – Selecting *mirror* specifies that packets that match the access profile are mirrored to a port defined in the **config mirror port** command. Port Mirroring must be enabled and a target port must be set. Remember, Port Mirroring cannot cross-box, that is they cannot span across switches in a switch stack.

*delete access\_id <value 1-65535>* – Use this command to delete a specific rule from the packet content mask profile. Up to 65535 rules may be specified for the Packet Content access profile.

Restrictions      User Account Command Level – Administrator and Operator

Example usage:

To create an access profile by packet content mask:

```
DES-3800:admin# config access_profile profile_id 3 add access_id 1 packet_content
offset_0-15 0x11111111 0x11111111 0x11111111 0x11111111 offset_16-31 0x11111111
0x11111111 0x11111111 0x11111111 port 1 deny
Command: config access_profile profile_id 3 add access_id 1 packet_content
offset_0-15 0x11111111 0x11111111 0x11111111 0x11111111 offset_16-31 0x11111111
0x11111111 0x11111111 0x11111111 port 1 deny

Success.

DES-3800:admin#
```

**delete access\_profile**

Purpose	Used to delete a previously created access profile.
Syntax	<b>delete access_profile profile_id [&lt;value 1-255&gt;   all]</b>
Description	The <b>delete access_profile</b> command is used to delete a previously created access profile on the Switch.
Parameters	<p><i>profile_id</i> &lt;value 1-255&gt; – Enter an integer between 1 and 255 that is used to identify the access profile that will be deleted with this command. This value is assigned to the access profile when it is created with the <b>create access_profile</b> command.</p> <p><i>all</i> – Entering this parameter will delete all access profiles currently configured on the Switch.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete the access profile with a profile ID of 1:

```
DES-3800:admin# delete access_profile profile_id 1
Command: delete access_profile profile_id 1

Success.

DES-3800:admin#
```

**show access\_profile**

Purpose	Used to display the currently configured access profiles on the Switch.
Syntax	<b>show access_profile {profile_id &lt;value 1-255&gt;}</b>
Description	The <b>show access_profile</b> command is used to display the currently configured access profiles.
Parameters	<p><i>profile_id</i> &lt;value 1-255&gt; – Enter an integer between 1 and 255 that is used to identify the access profile that will be viewed with this command. This value is assigned to the access profile when it is created with the <b>create access_profile</b> command.</p> <p>Entering this command without the <i>profile_id</i> parameter will command the Switch to display all access profile entries.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To display all of the currently configured access profiles on the Switch:

```
DES-3800:admin#show access_profile
Command: show access_profile
```

## create cpu access\_profile

Purpose	Used to create an access profile specifically for <b>CPU Interface Filtering</b> on the Switch and to define which parts of each incoming frame's header the Switch will examine. Masks can be entered that will be combined with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the <b>config cpu access_profile</b> command, below.
Syntax	<b>create cpu access_profile</b> [ethernet {vlan   source_mac <macmask>   destination_mac <macmask>   ethernet_type}   ip {vlan   source_ip_mask <netmask>   destination_ip_mask <netmask>   dscp   [icmp {type   code}   igmp {type}   tcp {src_port_mask <hex 0x0-0xffff>   dst_port_mask <hex 0x0-0xffff>   flag_mask [all   {urg   ack   psh   rst   syn   fin}]}   udp {src_port_mask <hex 0x0-0xffff>   dst_port_mask <hex 0x0-0xffff>   protocol_id {user_mask <hex 0x0-0xffffffff> } }   packet_content_mask {offset 0-15 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   offset 16-31 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   {offset 32-47 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   {offset 48-63 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>   {offset 64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> } } ] [profile_id value 1-5>]
Description	The <b>create cpu access_profile</b> command is used to create an access profile used only for CPU Interface Filtering. Masks can be entered that will be combined with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the <b>config cpu access_profile</b> command, below.

**create cpu access\_profile**

- Parameters
- ethernet* – Specifies that the Switch will examine the layer 2 part of each packet header.
    - *vlan* – Specifies that the Switch will examine the VLAN part of each packet header.
    - *source\_mac* <macmask> - Specifies to examine the source MAC address mask.
    - *destination\_mac* <macmask> - Specifies to examine the destination MAC address mask.
    - *ethernet\_type* – Specifies that the switch will examine the Ethernet type value in each frame's header.
  - ip* – Specifies that the switch will examine the IP address in each frame's header.
    - *vlan* – Specifies a VLAN mask.
    - *source\_ip\_mask* <netmask> – Specifies an IP address mask for the source IP address.
    - *destination\_ip\_mask* <netmask> – Specifies an IP address mask for the destination IP address.
    - *dscp* – Specifies that the switch will examine the DiffServ Code Point (DSCP) field in each frame's header.
    - *icmp* – Specifies that the switch will examine the Internet Control Message Protocol (ICMP) field in each frame's header.
      - *type* – Specifies that the switch will examine each frame's ICMP Type field.
      - *code* – Specifies that the switch will examine each frame's ICMP Code field.
    - *igmp* – Specifies that the switch will examine each frame's Internet Group Management Protocol (IGMP) field.
      - *type* – Specifies that the switch will examine each frame's IGMP Type field.
    - *tcp* – Specifies that the switch will examine each frames Transport Control Protocol (TCP) field.
      - *src\_port\_mask* <hex 0x0-0xffff> – Specifies a TCP port mask for the source port.
      - *dst\_port\_mask* <hex 0x0-0xffff> – Specifies a TCP port mask for the destination port.
    - *flag\_mask* - *all* | {*urg* | *ack* | *psh* | *rst* | *syn* | *fin* – Enter the appropriate flag\_mask parameter. All incoming packets have TCP port numbers contained in them as the forwarding criterion. These numbers have flag bits associated with them which are parts of a packet that determine what to do with the packet. The user may deny packets by denying certain flag bits within the packets. The user may choose between **all**, **urg** (urgent), **ack** (acknowledgement), **psh** (push), **rst** (reset), **syn** (synchronize) and **fin** (finish).
    - *udp* – Specifies that the switch will examine each frame's User Datagram Protocol (UDP) field.
      - *src\_port\_mask* <hex 0x0-0xffff> – Specifies a UDP port mask for the source port.
      - *dst\_port\_mask* <hex 0x0-0xffff> – Specifies a UDP port mask for the destination port.
    - *protocol\_id* – Specifies that the switch will examine each frame's Protocol ID field.
      - *user\_define\_mask* <hex 0x0-0xffffffff> – Specifies that the rule applies to the IP protocol ID and the mask options behind the IP header.
    - *packet\_content\_mask* – Specifies that the Switch will mask the packet header beginning with the offset value specified as follows:
      - *offset\_0-15* - Enter a value in hex form to mask the packet from byte 0 to byte 15.

**create cpu access\_profile**

- *offset\_16-31* - Enter a value in hex form to mask the packet from byte 16 to byte 31.
- *offset\_32-47* - Enter a value in hex form to mask the packet from byte 32 to byte 47.
- *offset\_48-63* - Enter a value in hex form to mask the packet from byte 48 to byte 63.
- *offset\_64-79* - Enter a value in hex form to mask the packet from byte 64 to byte 79.

*profile\_id <value 1-5>* – Specifies an index number that will identify the access profile being created with this command.

Restrictions    User Account Command Level – Administrator and Operator

Example usage:

To create a CPU access profile:

```
DES-3800:admin#create access_profile ip vlan source_ip_mask 20.0.0.0
destination_ip_mask 10.0.0.0 dscp icmp type code permit profile_id 1
Command: create access_profile ip vlan source_ip_mask 20.0.0.0
destination_ip_mask 10.0.0.0 dscp icmp type code permit profile_id 1

Success.

DES-3800:admin#
```

**delete cpu access\_profile**

Purpose	Used to delete a previously created access profile or cpu access profile.
Syntax	<b>delete cpu access_profile profile_id &lt;value 1-5&gt;</b>
Description	The <b>delete cpu access_profile</b> command is used to delete a previously created CPU access profile.
Parameters	<i>profile_id &lt;value 1-5&gt;</i> – Enter an integer between 1 and 5 that is used to identify the CPU access profile to be deleted with this command. This value is assigned to the access profile when it is created with the <b>create cpu access_profile</b> command.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete the CPU access profile with a profile ID of 1:

```
DES-3800:admin#delete cpu access_profile profile_id 1
Command: delete cpu access_profile profile_id 1

Success.

DES-3800:admin#
```

**config cpu access\_profile**

Purpose	Used to configure a cpu access profile used for CPU Interface Filtering and to define specific values that will be used to by the Switch to determine if a given packet should be forwarded or filtered. Masks entered using the <b>create cpu access_profile</b> command will be combined, using a logical AND operational method, with the values the Switch finds in the specified frame header fields. Specific values for the rules are entered using the
---------	--

**config cpu access\_profile**

**config cpu access\_profile** command, below.

**Syntax**

```
config cpu access_profile profile_id <value 1-5> [add access_id <value 1-65535>
[ethernet {vlan <vlan_name 32> | source_mac <macaddr> | destination_mac
<macaddr> | ethernet_type <hex 0x0-0xffff>} [permit | deny] | ip {vlan <vlan_name
32> | source_ip <ipaddr> | destination_ip <ipaddr> | dscp <value 0-63> | [icmp {type
<value 0-255> code <value 0-255>} | igmp {type <value 0-255>} | tcp {src_port
<value 0-65535> | dst_port <value 0-65535> | {urg | ack | psh | rst | syn | fin}}] | udp
{src_port <value 0-65535> | dst_port <value 0-65535>} | protocol_id <value 0 - 255>
{user_define <hex 0x0-0xffffffff>}] } [permit | deny] | packet_content {offset_0-15
<hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>|
offset_16-31 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>|
offset_32-47 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>|
offset_48-63 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>|
offset_64-79 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>|
offset_80-95 <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff> <hex 0x0-0xffffffff>} [permit | deny] | delete access_id <value 1-65535>]
```

**Description**

The **config cpu access\_profile** command is used to configure a CPU access profile for CPU Interface Filtering and to enter specific values that will be combined, using a logical AND operational method, with masks entered with the **create cpu access\_profile** command, above.

**Parameters**

**profile\_id <value 1-5>** – Enter an integer used to identify the access profile that will be configured with this command. This value is assigned to the access profile when it is created with the **create cpu access\_profile** command. The profile ID sets the relative priority for the profile and specifies an index number that will identify the access profile being created with this command. Priority is set relative to other profiles where the lowest profile ID has the highest priority.

**add access\_id <value 1-65535>** – Adds an additional rule to the above specified access profile. The value is used to index the rule created.

**ethernet** – Specifies that the Switch will look only into the layer 2 part of each packet.

- **vlan <vlan\_name 32>** – Specifies that the access profile will apply to only to this VLAN.
- **source\_mac <macaddr>** – Specifies that the access profile will apply to this source MAC address.
- **destination\_mac <macaddr>** – Specifies that the access profile will apply to this destination MAC address.
- **ethernet\_type <hex 0x0-0xffff>** – Specifies that the access profile will apply only to packets with this hexadecimal 802.1Q Ethernet type value in the packet header.

**ip** – Specifies that the Switch will look into the IP fields in each packet.

- **vlan <vlan\_name 32>** – Specifies that the access profile will apply to only this VLAN.
- **source\_ip <ipaddr>** – Specifies that the access profile will apply to only packets with this source IP address.
- **destination\_ip <ipaddr>** – Specifies that the access profile will apply to only packets with this destination IP address.
- **dscp <value 0-63>** – Specifies that the access profile will apply only to packets that have this value in their Type-of-Service (DiffServ code point, DSCP) field in their IP packet header

**icmp** – Specifies that the Switch will examine the Internet Control Message Protocol (ICMP) field within each packet.

- **type <value 0-255>** – Specifies that the access profile will apply to this ICMP type value.
- **code <value 0-255>** – Specifies that the access profile will apply to this ICMP code.

**config cpu access\_profile**

*igmp* – Specifies that the Switch will examine the Internet Group Management Protocol (IGMP) field within each packet.

- *type* <value 0-255> – Specifies that the access profile will apply to packets that have this IGMP type value.

*tcp* – Specifies that the Switch will examine the Transmission Control Protocol (TCP) field within each packet.

- *src\_port* <value 0-65535> – Specifies that the access profile will apply only to packets that have this TCP source port in their TCP header.
- *dst\_port* <value 0-65535> – Specifies that the access profile will apply only to packets that have this TCP destination port in their TCP header.

*protocol\_id* <value 0-255> – Specifies that the switch will examine the Protocol field in each packet and if this field contains the value entered here, apply the following rules.

*udp* – Specifies that the Switch will examine the User Datagram Protocol (UDP) field within each packet.

- *src\_port* <value 0-65535> – Specifies that the access profile will apply only to packets that have this UDP source port in their header.
- *dst\_port* <value 0-65535> – Specifies that the access profile will apply only to packets that have this UDP destination port in their header.

*protocol\_id* <value 0-255> – Specifies that the Switch will examine the protocol field in each packet and if this field contains the value entered here, apply the following rules.

- *user\_define\_mask* <hex 0x0-0xffffffff> – Specifies that the rule applies to the IP protocol ID and the mask options behind the IP header.

*packet\_content\_mask* – Specifies that the Switch will mask the packet header beginning with the offset value specified as follows:

- *offset\_0-15* - Enter a value in hex form to mask the packet from byte 0 to byte 15.
- *offset\_16-31* - Enter a value in hex form to mask the packet from byte 16 to byte 31.
- *offset\_32-47* - Enter a value in hex form to mask the packet from byte 32 to byte 47.
- *offset\_48-63* - Enter a value in hex form to mask the packet from byte 48 to byte 63.
- *offset\_64-79* - Enter a value in hex form to mask the packet from byte 64 to byte 79.

*permit* | *deny* – Specify that the packet matching the criteria configured with command will either be permitted entry to the CPU or denied entry to the CPU.

*delete access\_id* <value 1-65535> - Use this to remove a previously created access rule in a profile ID.

Restrictions      User Account Command Level – Administrator and Operator

Example usage:

To configure CPU access list entry:

```
DES-3800:admin#config cpu access_profile profile_id 5 add access_id 1 ip vlan default
source_ip 20.2.2.3 destination_ip 10.1.1.252 dscp 3 icmp type 11 code 32 port 1 deny
Command: config cpu access_profile profile_id 10 add access_id 1 ip vlan default
source_ip 20.2.2.3 destination_ip 10.1.1.252 dscp 3 icmp type 11 code 32 port 1 deny

Success.

DES-3800:admin#
```

## enable cpu\_interface\_filtering

Purpose	Used to enable CPU interface filtering on the Switch.
Syntax	<b>enable cpu_interface_filtering</b>
Description	This command is used, in conjunction with the <b>disable cpu_interface_filtering</b> command below, to enable and disable CPU interface filtering on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example Usage:

To enable CPU interface filtering:

```
DES-3800:admin#enable cpu_interface_filtering
Command: enable cpu_interface_filtering

Success.

DES-3800:admin#
```

## disable cpu\_interface\_filtering

Purpose	Used to disable CPU interface filtering on the Switch.
Syntax	<b>disable cpu_interface_filtering</b>
Description	This command is used, in conjunction with the <b>enable cpu_interface_filtering</b> command above, to enable and disable CPU interface filtering on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example Usage:

To disable CPU filtering:

```
DES-3800:admin#disable cpu_interface_filtering
Command: disable cpu_interface_filtering

Success.

DES-3800:admin#
```

## show cpu\_interface\_filtering

Purpose	Used to view the current running state of the CPU filtering mechanism on the Switch.
Syntax	<b>show cpu_interface_filtering</b>
Description	The <b>show cpu_interface_filtering</b> state command is used view the current running state of the CPU interface filtering mechanism on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To show the CPU filtering state on the Switch:

```
DES-3800:admin#show cpu_interface_filtering
Command: show cpu_interface_filtering

CPU Interface Filtering : Enabled

DES-3800:admin#
```

## show cpu\_access\_profile

Purpose	Used to view the CPU access profile entry currently set in the Switch.
Syntax	<b>show cpu access_profile {profile_id &lt;value 1-5&gt; {access_id &lt;value 1-65535&gt;}}</b>
Description	The <b>show cpu_access_profile</b> command is used view the current CPU interface filtering entries set on the Switch.
Parameters	<p><i>profile_id &lt;value 1-5&gt;</i> – Enter an integer between 1 and 5 that is used to identify the CPU access profile to be viewed with this command. This value is assigned to the access profile when it is created with the <b>create cpu access_profile</b> command.</p> <p><i>access_id &lt;value 1-65535&gt;</i> - Enter an integer between 1 and 65535 that is used to identify the CPU access profile rule to be viewed with this command. This value is assigned to the access profile rule when it is created with the <b>config cpu access_profile profile_id</b> command.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To show the CPU filtering state on the Switch:

```
DES-3800:admin#show cpu access_profile
Command: show cpu access_profile

CPU Access Profile Table

## SAFEGUARD ENGINE

Periodically, malicious hosts on the network will attack the Switch by utilizing packet flooding (ARP Storm) or other methods. These attacks may increase the CPU utilization beyond its capability. To alleviate this problem, the Safeguard Engine function was added to the Switch's software.

The Safeguard Engine can help the overall operability of the Switch by minimizing the workload of the Switch while the attack is ongoing, thus making it capable to forward essential packets over its network in a limited bandwidth. When the Switch either (a) receives too many packets to process or (b) exerts too much memory, it will enter an **Exhausted** mode. When in this mode, the Switch will drop all ARP and IP broadcast packets for a calculated time interval. Every five seconds, the Switch will check to see if there are too many packets flooding the Switch. If the threshold has been crossed, the Switch will initially stop all ingress ARP and IP broadcast packets for five seconds. After another five-second checking interval arrives, the Switch will again check the ingress flow of packets. If the flooding has stopped, the Switch will again begin accepting all packets. Yet, if the checking shows that there continues to be too many packets flooding the Switch, it will stop accepting all ARP and IP broadcast packets for double the time of the previous stop period. This doubling of time for stopping ingress ARP and IP broadcast packets will continue until the maximum time has been reached, which is 320 seconds and every stop from this point until a return to normal ingress flow would be 320 seconds.

Once in Exhausted mode, the packet flow will decrease by half of the level that caused the Switch to enter Exhausted mode. After the packet flow has stabilized, the rate will initially increase by 25% and then return to a normal packet flow.

The Safeguard Engine commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config safeguard_engine	{state [enable   disable]   cpu_utilization {rising_threshold <value 20-100>   falling_threshold <value 20-100>}   trap_log [enable   disable]}
show safeguard_engine	

Each command is listed, in detail, in the following sections.

config safeguard_engine	
Purpose	Used to configure the Safeguard Engine for the Switch.
Syntax	<b>config safeguard_engine {state [enable   disable]   cpu_utilization {rising_threshold &lt;value 20-100&gt;   falling_threshold &lt;value 20-100&gt;}   trap_log [enable   disable]}</b>
Description	This command is used to configure the settings for the CPU Safeguard Engine function of this Switch, based on CPU utilization.
Parameters	<p><i>state [enable   disable]</i> – Select the running state of the Safeguard Engine function as enable or disable.</p> <p><i>cpu_utilization</i> – Select this option to trigger the Safeguard Engine function to enable based on the following determinates:</p> <ul style="list-style-type: none"> <li><i>rising &lt;value 20-100&gt;</i> - The user can set a percentage value of the rising CPU utilization which will trigger the CPU protection function. Once the CPU utilization rises to this percentage, the Safeguard Engine mechanism will initiate.</li> <li><i>falling &lt;value 20-100&gt;</i> - The user can set a percentage value of the falling CPU utilization which will trigger the CPU protection function to cease. Once the CPU utilization falls to this percentage, the Safeguard Engine mechanism will shut down.</li> </ul> <p><i>trap_log [enable   disable]</i> – Choose whether to enable or disable the sending of messages to the device's SNMP agent and switch log once the Safeguard Engine has been activated by a high CPU utilization rate.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure the Switch for CPU protection.

```
DES-3800:admin#config safeguard_engine state enable cpu_utilization rising 50
falling 30 trap log enable
Command: config safeguard_engine state enable cpu_utilization rising 50 falling
30 trap log enable

Success.

DES-3800:admin#
```

## show safeguard\_engine

Purpose	To display the CPU Safeguard Engine parameters currently set in the Switch.
Syntax	<b>show safeguard_engine</b>
Description	This command is used to show the CPU Safeguard Engine information currently set on the Switch.
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To display current CPU protection parameters:

```
DES-3800:admin#show safeguard_engine
Command: show safeguard_engine

Safe Guard Engine State      : Enabled
Safe Guard Engine Current Status : Normal mode
=====
CPU utilization information:
Interval                    : 5 sec
Rising Threshold(20-100)    : 100 %
Falling Threshold(20-100)   : 20 %
Trap/Log                    : Enabled

DES-3800:admin#
```

## TRAFFIC SEGMENTATION COMMANDS

Traffic segmentation allows you to further sub-divide VLANs into smaller groups of ports that will help to reduce traffic on the VLAN. The VLAN rules take precedence, and then the traffic segmentation rules are applied.

Command	Parameters
config traffic_segmentation	<portlist> forward_list [null   <portlist>]
show traffic_segmentation	{<portlist>}

Each command is listed, in detail, in the following sections.

### config traffic\_segmentation

Purpose	Used to configure traffic segmentation on the Switch.
Syntax	<b>config traffic_segmentation &lt;portlist&gt; forward_list [null   &lt;portlist&gt;]</b>
Description	The <b>config traffic_segmentation</b> command is used to configure traffic segmentation on the Switch.
Parameters	<p><i>&lt;portlist&gt;</i> – Specifies a port or range of ports that will be configured for traffic segmentation.</p> <p><i>forward_list</i> – Specifies a range of ports that will receive forwarded frames from the ports specified in the portlist, above.</p> <ul style="list-style-type: none"> <li><i>null</i> – No ports are specified</li> <li><i>&lt;portlist&gt;</i> – Specifies a range of ports for the forwarding list. This list must be on the same Switch previously specified for traffic segmentation (i.e. following the <i>&lt;portlist&gt;</i> specified above for config traffic_segmentation).</li> </ul>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure ports 1 through 10 to be able to forward frames to port 11 through 15:

```
DES-3800:admin# config traffic_segmentation 1-10 forward_list 11-15
Command: config traffic_segmentation 1-10 forward_list 11-15

Success.

DES-3800:admin#
```

### show traffic\_segmentation

Purpose	Used to display the current traffic segmentation configuration on the Switch.
Syntax	<b>show traffic_segmentation {&lt;portlist&gt;}</b>
Description	The <b>show traffic_segmentation</b> command is used to display the current traffic segmentation configuration on the Switch.
Parameters	<i>&lt;portlist&gt;</i> – Specifies a port or range of ports for which the current traffic segmentation configuration on the Switch will be displayed.
Restrictions	User Account Command Level – All The port lists for segmentation and the forward list must be on the same Switch.

Example usage:

To display the current traffic segmentation configuration on the Switch.

```
DES-3800:admin#show traffic_segmentation
Command: show traffic_segmentation

## TIME AND SNTP COMMANDS

The Simple Network Time Protocol (SNTP) (an adaptation of the Network Time Protocol (NTP)) commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config sntp	{primary <ipaddr>   secondary <ipaddr>   poll-interval <int 30-99999>}
show sntp	
enable sntp	
disable sntp	
config time	<date ddmmmyyyy > <time hh:mm:ss >
config time_zone	{operator [+   -]   hour <gmt_hour 0-13>   min <minute 0-59>}
config dst	[disable   repeating {s_week <start_week 1-4,last>   s_day <start_day sun-sat>   s_mth <start_mth 1-12>   s_time <start_time hh:mm>   e_week <end_week 1-4,last>   e-day <end_day sun-sat>   e_mth <end_mth 1-12>   e_time <end_time hh:mm>   offset [30   60   90   120]}   annual {s_date <start_date 1-31>   s_mth <start_mth 1-12>   s_time <start_time hh:mm>   e_date <end_date 1-31>   e_mth <end_mth 1-12>   e_time <end_time hh:mm>   offset [30   60   90   120]}]
show time	

Each command is listed, in detail, in the following sections.

config sntp	
Purpose	Used to setup SNTP service.
Syntax	<b>config sntp {primary &lt;ipaddr&gt;   secondary &lt;ipaddr&gt;   poll-interval &lt;int 30-99999&gt;}</b>
Description	Use this command to configure SNTP service from an SNTP server. SNTP must be enabled for this command to function (See <i>enable sntp</i> ).
Parameters	<p><i>primary</i> – This is the primary server the SNTP information will be taken from.</p> <ul style="list-style-type: none"> <li>• <i>&lt;ipaddr&gt;</i> – The IP address of the primary server.</li> </ul> <p><i>secondary</i> – This is the secondary server the SNTP information will be taken from in the event the primary server is unavailable.</p> <ul style="list-style-type: none"> <li>• <i>&lt;ipaddr&gt;</i> – The IP address for the secondary server.</li> </ul> <p><i>poll-interval &lt;int 30-99999&gt;</i> – This is the interval between requests for updated SNTP information. The polling interval ranges from 30 to 99,999 seconds.</p>
Restrictions	User Account Command Level – Administrator and Operator SNTP service must be enabled for this command to function ( <i>enable sntp</i> ).

Example usage:

To configure SNTP settings:

```
DES-3800:admin#config sntp primary 10.1.1.1 secondary 10.1.1.2 poll-interval 30
Command: config sntp primary 10.1.1.1 secondary 10.1.1.2 poll-interval 30

Success.

DES-3800:admin#
```

## show sntp

Purpose	Used to display the SNTP information.
Syntax	<b>show sntp</b>
Description	This command will display SNTP settings information including the source IP address, time and poll interval.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To display SNTP configuration information:

```
DES-3800:admin#show sntp
Command: show sntp

Current Time Source   : System Clock
SNTP                  : Disabled
SNTP Primary Server   : 10.1.1.1
SNTP Secondary Server : 10.1.1.2
SNTP Poll Interval    : 30 sec

DES-3800:admin#
```

## enable sntp

Purpose	To enable SNTP server support.
Syntax	<b>enable sntp</b>
Description	This will enable SNTP support. SNTP service must be separately configured (see <b>config sntp</b> ). Enabling and configuring SNTP support will override any manually configured system time settings.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator SNTP settings must be configured for SNTP to function ( <b>config sntp</b> ).

Example usage:

To enable the SNTP function:

```
DES-3800:admin#enable sntp
```

```
Command: enable sntp
```

```
Success.
```

```
DES-3800:admin#
```

## disable sntp

Purpose	To disable SNTP server support.
Syntax	<b>disable sntp</b>
Description	This will disable SNTP support. SNTP service must be separately configured (see <b>config sntp</b> ).
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example:

To disable SNTP support:

```
DES-3800:admin#disable sntp
```

```
Command: disable sntp
```

```
Success.
```

```
DES-3800:admin#
```

## config time

Purpose	Used to manually configure system time and date settings.
Syntax	<b>config time &lt;date ddmmyyyy&gt; &lt;time hh:mm:ss&gt;</b>
Description	This will configure the system time and date settings. These will be overridden if SNTP is configured and enabled.
Parameters	<p><i>date</i> – Express the date using two numerical characters for the day of the month, three alphabetical characters for the name of the month, and four numerical characters for the year. For example: 03aug2003.</p> <p><i>time</i> – Express the system time using the format hh:mm:ss, that is, two numerical characters each for the hour using a 24-hour clock, the minute and second. For example: 19:42:30.</p>
Restrictions	<p>User Account Command Level – Administrator and Operator</p> <p>Manually configured system time and date settings are overridden if SNTP support is enabled.</p>

Example usage:

To manually set system time and date settings:

```
DES-3800:admin#config time 30jun2003 16:30:30
Command: config time 30jun2003 16:30:30

Success.

DES-3800:admin#
```

## config time\_zone

Purpose	Used to determine the time zone used in order to adjust the system clock.
Syntax	<b>config time_zone {operator [+   -]   hour &lt;gmt_hour 0-13&gt;   min &lt;minute 0-59&gt;}</b>
Description	This will adjust system clock settings according to the time zone. Time zone settings will adjust SNTP information accordingly.
Parameters	<p><i>operator</i> – Choose to add (+) or subtract (-) time to adjust for time zone relative to GMT.</p> <p><i>hour</i> – Select the number of hours different from GMT.</p> <p><i>min</i> – Select the number of minutes difference added or subtracted to adjust the time zone.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure time zone settings:

```
DES-3800:admin#config time_zone operator + hour 2 min 30
Command: config time_zone operator + hour 2 min 30

Success.

DES-3800:admin#
```

## config dst

Purpose	Used to enable and configure time adjustments to allow for the use of Daylight Savings Time (DST).
Syntax	<b>config dst [disable   repeating {s_week &lt;start_week 1-4,last&gt;   s_day &lt;start_day sun-sat&gt;   s_mth &lt;start_mth 1-12&gt;   s_time start_time hh:mm&gt;   e_week &lt;end_week 1-4,last&gt;   e_day &lt;end_day sun-sat&gt;   e_mth &lt;end_mth 1-12&gt;   e_time &lt;end_time hh:mm&gt;   offset [30   60   90   120]}   annual {s_date start_date 1-31&gt;   s_mth &lt;start_mth 1-12&gt;   s_time &lt;start_time hh:mm&gt;   e_date &lt;end_date 1-31&gt;   e_mth &lt;end_mth 1-12&gt;   e_time &lt;end_time hh:mm&gt;   offset [30   60   90   120]}]</b>
Description	DST can be enabled and configured using this command. When enabled this will adjust the system clock to comply with any DST requirement. DST adjustment effects system time for both manually configured time and time set using SNTP service.

## config dst

Parameters	<p><i>disable</i> - Disable the DST seasonal time adjustment for the Switch.</p> <p><i>repeating</i> - Using repeating mode will enable DST seasonal time adjustment. Repeating mode requires that the DST beginning and ending date be specified using a formula. For example, specify to begin DST on Saturday during the second week of April and end DST on Sunday during the last week of October.</p> <p><i>annual</i> - Using annual mode will enable DST seasonal time adjustment. Annual mode requires that the DST beginning and ending date be specified concisely. For example, specify to begin DST on April 3 and end DST on October 14.</p> <p><i>s_week</i> - Configure the week of the month in which DST begins.</p> <p><i>&lt;start_week 1-4,last&gt;</i> - The number of the week during the month in which DST begins where 1 is the first week, 2 is the second week and so on, last is the last week of the month.</p> <p><i>e_week</i> - Configure the week of the month in which DST ends.</p> <ul style="list-style-type: none"> <li><i>&lt;end_week 1-4,last&gt;</i> - The number of the week during the month in which DST ends where 1 is the first week, 2 is the second week and so on, last is the last week of the month.</li> </ul> <p><i>s_day</i> - Configure the day of the week in which DST begins.</p> <ul style="list-style-type: none"> <li><i>&lt;start_day sun-sat&gt;</i> - The day of the week in which DST begins expressed using a three character abbreviation (sun, mon, tue, wed, thu, fri, sat)</li> </ul> <p><i>e_day</i> - Configure the day of the week in which DST ends.</p> <ul style="list-style-type: none"> <li><i>&lt;end_day sun-sat&gt;</i> - The day of the week in which DST ends expressed using a three character abbreviation (sun, mon, tue, wed, thu, fri, sat)</li> </ul> <p><i>s_mth</i> - Configure the month in which DST begins.</p> <ul style="list-style-type: none"> <li><i>&lt;start_mth 1-12&gt;</i> - The month to begin DST expressed as a number.</li> </ul> <p><i>e_mth</i> - Configure the month in which DST ends.</p> <ul style="list-style-type: none"> <li><i>&lt;end_mth 1-12&gt;</i> - The month to end DST expressed as a number.</li> </ul> <p><i>s_time</i> - Configure the time of day to begin DST.</p> <ul style="list-style-type: none"> <li><i>&lt;start_time hh:mm&gt;</i> - Time is expressed using a 24-hour clock, in hours and minutes.</li> </ul> <p><i>e_time</i> - Configure the time of day to end DST.</p> <ul style="list-style-type: none"> <li><i>&lt;end_time hh:mm&gt;</i> - Time is expressed using a 24-hour clock, in hours and minutes.</li> </ul> <p><i>s_date</i> - Configure the specific date (day of the month) to begin DST.</p> <ul style="list-style-type: none"> <li><i>&lt;start_date 1-31&gt;</i> - The start date is expressed numerically.</li> </ul> <p><i>e_date</i> - Configure the specific date (day of the month) to begin DST.</p> <ul style="list-style-type: none"> <li><i>&lt;end_date 1-31&gt;</i> - The end date is expressed numerically.</li> </ul> <p><i>offset [30   60   90   120]</i> - Indicates number of minutes to add or to subtract during the summertime. The possible offset times are 30,60,90,120. The default value is 60</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure daylight savings time on the Switch:

```
DES-3800:admin#config dst repeating s_week 2 s_day tue s_mth 4
s_time 15:00 e_week 2 e_day wed e_mth 10 e_time 15:30 offset 30
Command: config dst repeating s_week 2 s_day tue s_mth 4 s_time
15:00 e_week 2 e_day wed e_mth 10 e_time 15:30 offset 30

Success.

DES-3800:admin#
```

## show time

Purpose	Used to display the current time settings and status.
Syntax	<b>show time</b>
Description	This will display system time and date configuration as well as display current system time.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To show the time currently set on the Switch's System clock:

```
DES-3800:admin#show time
Command: show time

Current Time Source : System Clock
Boot Time           : 0 Days 00:00:00
Current Time        : 1 Days 01:39:17
Time Zone           : GMT +02:30
Daylight Saving Time : Repeating
Offset in Minutes   : 30
  Repeating From     : Apr 2nd Tue 15:00
                    To       : Oct 2nd Wed 15:30
  Annual   From      : 29 Apr 00:00
                    To       : 12 Oct 00:00

DES-3800:admin#
```

**ARP COMMANDS**

The ARP commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create arpentry	<ipaddr> <macaddr>
config arpentry	<ipaddr> <macaddr>
delete arpentry	{[<ipaddr>   all]}
show arpentry	{ipif <ipif_name 12>   ipaddress <ipaddr>   static}
config arp_aging time	<value 0-65535>
clear arptable	

Each command is listed, in detail, in the following sections.

**create arpentry**

Purpose	Used to make a static entry into the ARP table.
Syntax	<b>create arpentry &lt;ipaddr&gt; &lt;macaddr&gt;</b>
Description	This command is used to enter an IP address and the corresponding MAC address into the Switch's ARP table.
Parameters	<p>&lt;ipaddr&gt; – The IP address of the end node or station.</p> <p>&lt;macaddr&gt; – The MAC address corresponding to the IP address above.</p>
Restrictions	<p>User Account Command Level – Administrator and Operator</p> <p>The Switch supports up to 255 static ARP entries.</p>

Example usage:

To create a static ARP entry for the IP address 10.48.74.121 and MAC address 00:50:BA:00:07:36:

```
DES-3800:admin#create arpentry 10.48.74.121 00-50-BA-00-07-36
Command: create arpentry 10.48.74.121 00-50-BA-00-07-36

Success.

DES-3800:admin#
```

**config arpentry**

Purpose	Used to configure a static entry in the ARP table.
Syntax	<b>config arpentry &lt;ipaddr&gt; &lt;macaddr&gt;</b>
Description	This command is used to configure a static entry in the ARP Table. The user may specify the IP address and the corresponding MAC address of an entry in the Switch's ARP table.
Parameters	<p>&lt;ipaddr&gt; – The IP address of the end node or station.</p> <p>&lt;macaddr&gt; – The MAC address corresponding to the IP address above.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure a static ARP entry for the IP address 10.48.74.12 and MAC address 00:50:BA:00:07:36:

```
DES-3800:admin#config arpentry 10.48.74.12 00-50-BA-00-07-36
Command: config arpentry 10.48.74.12 00-50-BA-00-07-36

Success.

DES-3800:admin#
```

## delete arpentry

Purpose	Used to delete a static entry into the ARP table.
Syntax	<b>delete arpentry {[&lt;ipaddr&gt;   all]}</b>
Description	This command is used to delete a static ARP entry, made using the <b>create arpentry</b> command above, by specifying either the IP address of the entry or all. Specifying <i>all</i> clears the Switch's ARP table.
Parameters	<i>&lt;ipaddr&gt;</i> – The IP address of the end node or station. <i>all</i> – Deletes all ARP entries.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete an entry of IP address 10.48.74.121 from the ARP table:

```
DES-3800:admin#delete arpentry 10.48.74.121
Command: delete arpentry 10.48.74.121

Success.

DES-3800:admin#
```

## config arp\_aging time

Purpose	Used to configure the age-out timer for ARP table entries on the Switch.
Syntax	<b>config arp_aging time &lt;value 0-65535&gt;</b>
Description	This command sets the maximum amount of time, in minutes, that an ARP entry can remain in the Switch's ARP table, without being accessed, before it is dropped from the table.
Parameters	<i>time &lt;value 0-65535&gt;</i> – The ARP age-out time, in minutes. The value may be set in the range of 0-65535 minutes with a default setting of 20 minutes.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure ARP aging time:

```
DES-3800:admin#config arp_aging time 30
Command: config arp_aging time 30

Success.

DES-3800:admin#
```

## show arpentry

Purpose	Used to display the ARP table.
Syntax	<b>show arpentry {ipif &lt;ipif_name 12&gt;   ipaddress &lt;ipaddr&gt;   static}</b>
Description	This command is used to display the current contents of the Switch's ARP table.
Parameters	<p><i>ipif &lt;ipif_name 12&gt;</i> – The name of the IP interface the end node or station for which the ARP table entry was made, resides on.</p> <p><i>ipaddress &lt;ipaddr&gt;</i> – The network address corresponding to the IP interface name above.</p> <p><i>static</i> – Displays the static entries to the ARP table.</p>
Restrictions	User Account Command Level – All

Example usage:

To display the ARP table:

```
DES-3800:admin#show arpentry
Command: show arpentry

ARP Aging Time : 30
```

Interface	IP Address	MAC Address	Type
System	10.0.0.0	FF-FF-FF-FF-FF-FF	Local/Broadcast
System	10.1.1.169	00-50-BA-70-E4-4E	Dynamic

System	10.255.255.255	FF-FF-FF-FF-FF-FF	Local/Broadcast

```
Total Entries = 20

DES-3800:admin#
```

## clear arptable

Purpose	Used to remove all dynamic ARP table entries.
Syntax	<b>clear arptable</b>
Description	This command is used to remove dynamic ARP table entries from the Switch's ARP table. Static ARP table entries are not affected.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To remove dynamic entries in the ARP table:

```
DES-3800:admin#clear arptable
```

```
Command: clear arptable
```

```
Success.
```

```
DES-3800:admin#
```

**VRRP COMMANDS**

*VRRP* or *Virtual Routing Redundancy Protocol* is a function on the Switch that dynamically assigns responsibility for a virtual router to one of the VRRP routers on a LAN. The VRRP router that controls the IP address associated with a virtual router is called the Master, and will forward packets sent to this IP address. This will allow any Virtual Router IP address on the LAN to be used as the default first hop router by end hosts. Utilizing VRRP, the administrator can achieve a higher available default path cost without needing to configure every end host for dynamic routing or routing discovery protocols.

Statically configured default routes on the LAN are prone to a single point of failure. VRRP is designed to eliminate these failures by setting an election protocol that will assign a responsibility for a virtual router to one of the VRRP routers on the LAN. When a virtual router fails, the election protocol will select a virtual router with the highest priority to be the Master router on the LAN. This retains the link and the connection is kept alive, regardless of the point of failure.

To configure VRRP for virtual routers on the Switch, an IP interface must be present on the system and it must be a part of a VLAN. VRRP IP interfaces may be assigned to every VLAN, and therefore IP interface, on the Switch. VRRP routers within the same VRRP group must be consistent in configuration settings for this protocol to function optimally.

The VRRP commands in the Command Line Interface (CLI) are listed, along with the appropriate parameters, in the following table.

Command	Parameters
enable vrrp	{ping}
disable vrrp	{ping}
create vrrp vrid	<vrid 1-255> ipif <ipif_name 12> ipaddress <ipaddr> {state [enable   disable]   priority <int 1-254>   advertisement_interval <int 1-255>   preempt [true   false]   critical_ip <ipaddr>   critical_ip_state [enable   disable]}
config vrrp vrid	<vrid 1-255> ipif <ipif_name 12> {state [enable   disable]   priority <int 1-254>   ipaddress <ipaddr>   advertisement_interval <int 1-255>   preempt [true   false]   critical_ip <ipaddr>   critical_ip_state [enable   disable]}
config vrrp ipif	<ipif_name 12> [authtype [none   simple authdata <string 8>   ip authdata <string 16>]]
show vrrp	{ipif <ipif_name 12> {vrid <vrid 1-255>}}
delete vrrp	{vrid <vrid 1-255> ipif <ipif_name 12>}

Each command is listed, in detail, in the following sections.

<b>enable vrrp</b>	
Purpose	To enable the VRRP function on the Switch.
Syntax	<b>enable vrrp {ping}</b>
Description	This command will enable the VRRP function on the Switch.
Parameters	{ping} – Adding this parameter to the command will allow the virtual IP address to be pinged from other host end nodes to verify connectivity. This will only enable the ping connectivity check function. To enable the VRRP protocol on the Switch, omit this parameter. This command is disabled by default.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable VRRP globally on the Switch:

```
DES-3800:admin#enable vrrp
Command: enable vrrp

Success.

DES-3800:admin#
```

Example usage:

To enable the virtual IP address to be pinged:

```
DES-3800:admin#enable vrrp ping
Command: enable vrrp ping

Success.

DES-3800:admin#
```

## disable vrrp

Purpose	To disable the VRRP function on the Switch.
Syntax	<b>disable vrrp {ping}</b>
Description	This command will disable the VRRP function on the Switch.
Parameters	<i>{ping}</i> - Adding this parameter to the command will stop the virtual IP address from being pinged from other host end nodes to verify connectivity. This will only disable the ping connectivity check function. To disable the VRRP protocol on the Switch, omit this parameter.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable the VRRP function globally on the Switch:

```
DES-3800:admin#disable vrrp
Command: disable vrrp

Success.

DES-3800:admin#
```

Example usage:

To disable the virtual IP address from being pinged:

```
DES-3800:admin#disable vrrp ping
Command: disable vrrp ping

Success.

DES-3800:admin#
```

**create vrrp vrid**

Purpose	To create a VRRP router on the Switch.
Syntax	<b>vrid &lt;vrid 1-255&gt; ipif &lt;ipif_name 12&gt; ipaddress &lt;ipaddr&gt; {state [enable   disable]   priority &lt;int 1-254&gt;   advertisement_interval &lt;int 1-255&gt;   preempt [true   false]   critical_ip &lt;ipaddr&gt;   critical_ip_state [enable   disable]}</b>
Description	This command is used to create a VRRP interface on the Switch.
Parameters	<p><i>vrid &lt;vrid 1-255&gt;</i> - Enter a value between 1 and 255 to uniquely identify this VRRP group on the Switch. All routers participating in this group must be assigned the same <i>vrid</i> value. This value MUST be different from other VRRP groups set on the Switch.</p> <p><i>ipif &lt;ipif_name 12&gt;</i> - Enter the name of a previously configured IP interface that you wish to create a VRRP entry for. This IP interface must be assigned to a VLAN on the Switch.</p> <p><i>ipaddress &lt;ipaddr&gt;</i> - Enter the IP address that will be assigned to the VRRP router. This IP address is also the default gateway that will be statically assigned to end hosts and must be set for all routers that participate in this group.</p> <p><i>state [enable   disable]</i> - Used to enable and disable the VRRP router on the Switch.</p> <p><i>priority &lt;int 1-254&gt;</i> - Enter a value between 1 and 254 to indicate the router priority. The VRRP Priority value may determine if a higher priority VRRP router overrides a lower priority VRRP router. A higher priority will increase the probability that this router will become the Master router of the group. A lower priority will increase the probability that this router will become the backup router. VRRP routers that are assigned the same priority value will elect the highest physical IP address as the Master router. The default value is 100. (The value of 255 is reserved for the router that owns the IP address associated with the virtual router and is therefore set automatically.)</p> <p><i>advertisement_interval &lt;int 1-255&gt;</i> - Enter a time interval value, in seconds, for sending VRRP message packets. This value must be consistent with all routers participating within the same VRRP group. The default is 1 second.</p> <p><i>preempt [true   false]</i> - This entry will determine the behavior of backup routers within the VRRP group by controlling whether a higher priority backup router will preempt a lower priority Master router. A true entry, along with having the backup router's priority set higher than the masters priority, will set the backup router as the Master router. A false entry will disable the backup router from becoming the Master router. This setting must be consistent with all routers participating within the same VRRP group. The default setting is true.</p> <p><i>critical_ip &lt;ipaddr&gt;</i> - Enter the IP address of the physical device that will provide the most direct route to the Internet or other critical network connections from this virtual router. This must be a real IP address of a real device on the network. If the connection from the virtual router to this IP address fails, the virtual router will be disabled automatically. A new master will be elected from the backup routers participating in the VRRP group. Different critical IP addresses may be assigned to different routers participating in the VRRP group, and can therefore define multiple routes to the Internet or other critical network connections.</p> <p><i>critical_ip_state [enable   disable]</i> - This parameter is used to enable or disable the critical IP address entered above. The default is disable.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To create a VRRP entry:

```
DES-3800:admin#create vrrp vrid 1 ipif Darren ipaddress 11.1.1.1 state
enable priority 200 advertisement_interval 1 preempt true critical_ip
10.53.13.224 critical_ip_state enable

Command: create vrrp vrid 1 ipif Darren ipaddress 11.1.1.1 state enable
priority 200 advertisement_interval 1 preempt true critical_ip 10.53.13.224
critical_ip_state enable

Success.

DES-3800:admin#
```

## config vrrp vrid

Purpose	To configure a VRRP router set on the Switch.
Syntax	<b>config vrrp vrid &lt;vrid 1-255&gt; ipif &lt;ipif_name 12&gt; {state [enable   disable]   priority &lt;int 1-254&gt;   ipaddress &lt;ipaddr&gt;   advertisement_interval &lt;int 1-255&gt;   preempt [true   false]   critical_ip &lt;ipaddr&gt;   critical_ip_state [enable   disable]}</b>
Description	This command is used to configure a previously created VRRP interface on the Switch.
Parameters	<p><i>vrid &lt;vrid 1-255&gt;</i> - Enter a value between 1 and 255 that uniquely identifies the VRRP group to configure. All routers participating in this group must be assigned the same <i>vrid</i> value. This value MUST be different from other VRRP groups set on the Switch.</p> <p><i>ipif &lt;ipif_name 12&gt;</i> - Enter the name of a previously configured IP interface to configure a VRRP entry for. This IP interface must be assigned to a VLAN on the Switch.</p> <p><i>state [enable   disable]</i> – Used to enable and disable the VRRP router on the Switch.</p> <p><i>priority &lt;int 1-254&gt;</i> - Enter a value between 1 and 254 to indicate the router priority. The VRRP Priority value may determine if a higher priority VRRP router overrides a lower priority VRRP router. A higher priority will increase the probability that this router will become the Master router of the group. A lower priority will increase the probability that this router will become the backup router. VRRP routers that are assigned the same priority value will elect the highest physical IP address as the Master router. The default value is 100. (The value of 255 is reserved for the router that owns the IP address associated with the virtual router and is therefore set automatically.)</p> <p><i>ipaddress &lt;ipaddr&gt;</i> - Enter the virtual IP address that will be assigned to the VRRP entry. This IP address is also the default gateway that will be statically assigned to end hosts and must be set for all routers that participate in this group.</p> <p><i>advertisement_interval &lt;int 1-255&gt;</i> - Enter a time interval value, in seconds, for sending VRRP message packets. This value must be consistent with all routers participating within the same VRRP group. The default is 1 second.</p> <p><i>preempt [true   false]</i> – This entry will determine the behavior of backup routers within the VRRP group by controlling whether a higher priority backup router will preempt a lower priority Master router. A true entry, along with having the backup router's priority set higher than the masters priority, will set the backup router as the Master router. A false entry will disable the backup router from becoming the Master router. This setting must be consistent with all routers participating within the</p>

## config vrrp vrid

same VRRP group. The default setting is *true*.

*critical\_ip <ipaddr>* - Enter the IP address of the physical device that will provide the most direct route to the Internet or other critical network connections from this virtual router. This must be a real IP address of a real device on the network. If the connection from the virtual router to this IP address fails, the virtual router will be disabled automatically. A new master will be elected from the backup routers participating in the VRRP group. Different critical IP addresses may be assigned to different routers participating in the VRRP group, and can therefore define multiple routes to the Internet or other critical network connections.

*critical\_ip\_state [enable | disable]* – This parameter is used to enable or disable the critical IP address entered above. The default is *disable*.

Restrictions

User Account Command Level – Administrator and Operator

Example usage:

To configure a VRRP entry:

**DES-3800:admin#config vrrp vrid 1 ipif Trinity state enable priority 100 advertisement\_interval 2**  
**Command: config vrrp vrid 1 ipif Trinity state enable priority 100 advertisement\_interval 2**

**Success.**

**DES-3800:admin#**

## config vrrp ipif

Purpose

To configure the authentication type for the VRRP routers of an IP interface.

Syntax

**config vrrp ipif <ipif\_name 12> [authtype [none | simple authdata <string 8> | ip authdata <string 16>]**

Description

This command is used to set the authentication type for the VRRP routers of an IP interface.

Parameters

*ipif <ipif\_name 12>* - Enter the name of a previously configured IP interface for which to configure the VRRP entry. This IP interface must be assigned to a VLAN on the Switch.

*authtype* – Specifies the type of authentication used. The authtype must be consistent with all routers participating within the VRRP group. The user may choose between:

- *none* – Entering this parameter indicates that VRRP protocol exchanges will not be authenticated.
- *simple authdata <string 8>* - This parameter, along with an alphanumeric string of no more than eight characters, to set a simple password for comparing VRRP message packets received by a router. If the two passwords are not exactly the same, the packet will be dropped.

*ip authdata <string 16>* - This parameter will require the user to set an alphanumeric authentication string of no more than 16 characters to generate a MD5 message digest for authentication in comparing VRRP messages received by the router. If the two values are inconsistent, the packet will be dropped.

Restrictions

User Account Command Level – Administrator and Operator

Example usage:

To set the authentication type for a VRRP entry:

```
DES-3800:admin#config vrrp ipif Trinity authtype simple authdata tomato
Command: config vrrp ipif Trinity authtype simple authdata tomato

Success.

DES-3800:admin#
```

## show vrrp

Purpose	To view the VRRP settings set on the Switch.
Syntax	<b>show vrrp ipif &lt;ipif_name 12&gt; vrid &lt;vrid 1-255&gt;</b>
Description	This command is used to view current VRRP settings of the VRRP Operations table.
Parameters	<p><i>ipif &lt;ipif_name 12&gt;</i> - Enter the name of a previously configured IP interface for which to view the VRRP settings. This IP interface must be assigned to a VLAN on the Switch.</p> <p><i>vrid &lt;vrid 1-255&gt;</i> - Enter the VRRP ID of a VRRP entry for which to view these settings.</p>
Restrictions	User Account Command Level – All

Example usage:

To view the global VRRP settings currently implemented on the Switch (VRRP Enabled):

```
DES-3800:admin#show vrrp
Command: show vrrp

Global VRRP           : Enabled
Non-owner response PING : Disabled

Interface Name        : System
Authentication type    : No Authentication

  VRID                : 2
  Virtual IP Address   : 10.53.13.3
  Virtual MAC Address  : 00-00-5E-00-01-02
  Virtual Router State : Master
  State                : Enabled
  Priority              : 255
  Master IP Address    : 10.53.13.3
  Critical IP Address  : 0.0.0.0
  Checking Critical IP  : Disabled
  Advertisement Interval : 1 secs
  Preempt Mode         : True
  Virtual Router Up Time : 2754089 centi-secs
Total Entries : 1

DES-3800:admin#
```

**delete vrrp**

Purpose	Used to delete a VRRP entry from the switch.
Syntax	<b>delete vrrp {vrid &lt;vrid 1-255&gt; ipif &lt;ipif_name 12&gt;}</b>
Description	This command is used to remove a VRRP router running on a local device.
Parameters	<i>vrid &lt;vrid 1-255&gt;</i> - Enter the VRRP ID of the virtual router to be deleted. Not entering this parameter will delete all VRRP entries on the Switch. <i>ipif &lt;ipif_name 12&gt;</i> - Enter the name of the IP interface which holds the VRRP router to delete.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete a VRRP entry:

```
DES-3800:admin#delete vrrp vrid 2 ipif Trinity  
Command: delete vrrp vrid 2 ipif Trinity
```

```
Success.
```

```
DES-3800:admin#
```

## ROUTING TABLE COMMANDS

The routing table commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create iproute	<network_address> <ipaddr> {<metric 1-65535>} {[primary   backup]}
create iproute default	<ipaddr> {<metric 1-65535>}
delete iproute default	<ipaddr>
delete iproute	<network_address> <ipaddr> {[primary   backup]}
show iproute	{<network_address>   rip   ospf}
show iproute static	

Each command is listed, in detail, in the following sections.

### create iproute

Purpose	Used to create IP route entries to the Switch's IP routing table.
Syntax	<b>create iproute &lt;network_address&gt; &lt;ipaddr&gt; {&lt;metric 1-65535&gt;} {[primary   backup]}</b>
Description	This command is used to create a primary and backup IP route entry to the Switch's IP routing table.
Parameters	<p>&lt;network_address&gt; – IP address and netmask of the IP interface that is the destination of the route. The address and mask information can be specified using the traditional format (for example, 10.1.2.3/255.0.0.0 or in CIDR format, 10.1.2.3/8).</p> <p>&lt;ipaddr&gt; – The gateway IP address for the next hop router.</p> <p>&lt;metric 1-65535&gt; – Allows the entry of a routing protocol metric entry, representing the number of routers between the Switch and the IP address above. The default setting is 1.</p> <p>[primary   backup] - The user may choose between Primary and Backup. If the Primary Static/Default Route fails, the Backup Route will support the entry. Please take note that the Primary and Backup entries cannot have the same Gateway.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To add a single static address 10.48.74.121, mask 255.0.0.0 and gateway 10.1.1.254 to the routing table:

```
DES-3800:admin#create iproute 10.48.74.121/255.0.0.0 10.1.1.254 1
Command: create iproute 10.48.74.121/8 10.1.1.254 1

Success.

DES-3800:admin#
```

**create iproute default**

Purpose	Used to create IP route entries to the Switch's IP routing table.
Syntax	<b>create iproute default &lt;ipaddr&gt; {&lt;metric&gt;}</b>
Description	This command is used to create a default static IP route entry to the Switch's IP routing table.
Parameters	<p>&lt;ipaddr&gt; – The gateway IP address for the next hop router.</p> <p>&lt;metric&gt; – Allows the entry of a routing protocol metric entry representing the number of routers between the Switch and the IP address above. The default setting is 1.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To add the default static address 10.48.74.121, with a metric setting of 1, to the routing table:

```
DES-3800:admin#create iproute default 10.48.74.121 1
Command: create iproute default 10.48.74.121 1
```

**Success.**

```
DES-3800:admin#
```

**delete iproute**

Purpose	Used to delete an IP route entry from the Switch's IP routing table.
Syntax	<b>delete iproute &lt;network_address&gt; &lt;ipaddr&gt; [primary   backup]</b>
Description	This command will delete an existing entry from the Switch's IP routing table.
Parameters	<p>&lt;network_address&gt; – IP address and netmask of the IP interface that is the destination of the route. The address and mask information can be specified using the traditional format (for example, 10.1.2.3/255.0.0.0 or in CIDR format, 10.1.2.3/8).</p> <p>&lt;ipaddr&gt; – The gateway IP address for the next hop router.</p> <p>[primary   backup] – The user may choose between Primary and Backup. If the Primary Static/Default Route fails, the Backup Route will support the entry. Please take note that the Primary and Backup entries cannot have the same Gateway.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete a backup static address 10.48.75.121, mask 255.0.0.0 and gateway (ipaddr) entry of 10.1.1.254 from the routing table:

```
DES-3800:admin#delete iproute 10.48.74.121/8 10.1.1.254
Command: delete iproute 10.48.74.121/8 10.1.1.254
```

**Success.**

```
DES-3800:admin#
```

**delete iproute default**

Purpose	Used to delete a default IP route entry from the Switch's IP routing table.
Syntax	<b>delete iproute default &lt;ipaddr&gt;</b>
Description	This command will delete an existing default entry from the Switch's IP routing table.
Parameters	<ipaddr> - The gateway IP address for the next hop router.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete the default IP route 10.53.13.254:

```
DES-3800:admin#delete iproute default 10.53.13.254
Command: delete iproute default 10.53.13.254

Success.

DES-3800:admin#
```

**show iproute**

Purpose	Used to display the Switch's current IP routing table.
Syntax	<b>show iproute {&lt;network_address&gt;} {[rip   ospf]}</b>
Description	This command will display the Switch's current IP routing table.
Parameters	<p>&lt;network_address&gt; –The IP address and netmask of the IP interface that is the destination of the route. The address and mask information can be specified using the traditional format (for example, 10.1.2.3/255.0.0.0 or in CIDR format, 10.1.2.3/8).</p> <p><i>rip</i> – Use this parameter to display RIP IP route entries.</p> <p><i>ospf</i> – Use this parameter to display OSPF IP route entries.</p>
Restrictions	User Account Command Level – All

Example usage:

To display the contents of the IP routing table:

```
DES-3800:admin#show iproute
Command: show iproute

Routing Table

IP Address/Netmask  Gateway    Interface  Hops  Protocol
-----
10.0.0.0/8          0.0.0.0    System     1     Local

Total Entries : 1

DES-3800:admin#
```

## show iproute static

Purpose	Used to display the Switch's current static IP routing table.
Syntax	<b>show iproute static</b>
Description	This command will display the Switch's current static IP routing table.
Parameters	None.
Restrictions	None.

Example usage:

To display the contents of the static IP routing table:

```
DES-3800:admin#show iproute static
Command: show iproute static

Static Routing Table

IP Address/Netmask  Gateway          Hops  Protocol  Backup Status
-----
0.0.0.0/0           218.187.118.254  1     Default   Primary

Total Entries : 1

DES-3800:admin#
```

## ROUTE REDISTRIBUTION COMMANDS

The route redistribution commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create route redistribute dst ospf src	[static   rip   local] {mettype [1   2]   metric <value 0-16777214>}
create route redistribute dst rip src	[local   static   ospf {all   internal   external   type_1   type_2   inter+e1   inter+e2}] {metric <value 0-16>}
config route redistribute dst ospf src	[static   rip   local] {mettype [1   2]   metric <value 0-16777214>}
config route redistribute dst rip src	[local   static   ospf {all   internal   external   type_1   type_2   inter+e1   inter+e2}] {metric <value 0-16>}
delete route redistribute	[dst [rip   ospf] src [rip   static   local   ospf]]
show route redistribute	{dst [rip   ospf]   src [rip   static   local   ospf]}

Each command is listed, in detail, in the following sections.

### create route redistribute dst ospf src

Purpose	Used to add route redistribution settings for the exchange of RIP routes to OSPF routes on the Switch.
Syntax	<b>create route redistribute dst ospf src [static   rip   local] {mettype [ 1   2]   metric &lt;value 0-16777214&gt;}</b>
Description	This command will redistribute routing information between the OSPF and RIP routing protocols to all routers on the network that are running OSPF or RIP. Routing information entered into the Static Routing Table on the local xStack switch is also redistributed.
Parameters	<p><i>src</i> [static   rip   local] – Allows for the selection of the protocol for the source device.</p> <p><i>mettype</i> [1   2] – Allows for the selection of one of two methods of calculating the metric value.</p> <ul style="list-style-type: none"> <li>Type-1 calculates (for RIP to OSPF) by adding the destination's interface cost to the metric entered in the Metric field.</li> <li>Type-2 uses the metric entered in the Metric field without change. This field applies only when the destination field is OSPF.</li> </ul> <p><i>metric</i> &lt;value 0-16777214&gt; – Allows the entry of an OSPF interface cost. This is analogous to a Hop Count in the RIP routing protocol.</p>
Restrictions	User Account Command Level – Administrator and Operator

Routing information source – RIP, the Static Route table, and the Local interface routing information. Routing information will be redistributed to OSPF.

Route Source	Metric	Metric Type
RIP	0 to 16777214	mettype 1 mettype 2
Static	0 to 16777214	mettype 1 mettype 2
Local	0 to 16777214	mettype 1 mettype 2

Allowed Metric Type combinations are **mettype 1** or **mettype 2**. The metric value **0** above will be redistributed in OSPF as the metric **20**.

Example usage:

To add route redistribution settings:

```
DES-3800:admin#create route redistribute dst ospf src rip
Command: create route redistribute dst ospf src rip
```

Success.

```
DES-3800:admin#
```

## create route redistribute dst rip src

Purpose	Used to add route redistribution settings for the exchange of OSPF routes to RIP routes on the Switch.
Syntax	<b>create route redistribute dst rip src [local   static   ospf {all   internal   external   type_1   type_2   inter+e1   inter+e2}] {metric &lt;value 0-16&gt;}</b>
Description	This command will redistribute routing information between the OSPF and RIP routing protocols to all routers on the network that are running OSPF or RIP. Routing information entered into the Static Routing Table on the local xStack switch is also redistributed
Parameters	<p><b>src</b> – Allows the selection of the protocol of the source device, as being either local, static or OSPF. After selecting the source device, the user may set the following parameters for that source device from the following options:</p> <ul style="list-style-type: none"> <li><i>all</i> – Specifies both internal and external.</li> <li><i>internal</i> – Specifies the internal protocol of the source device.</li> <li><i>external</i> – Specifies the external protocol of the source device.</li> <li><i>type_1</i> – Calculates the metric (for RIP to OSPF) by adding the destination's interface cost to the metric entered in the Metric field.</li> <li><i>type_2</i> – Uses the metric entered in the Metric field without change. This field applies only when the destination field is OSPF.</li> <li><i>inter+e1</i> – Specifies the internal protocol AND type 1 of the external protocol.</li> <li><i>inter+e2</i> – Specifies the internal protocol AND type 2 of the external protocol.</li> </ul> <p><i>metric &lt;value 0-16&gt;</i> – Allows the entry of an OSPF interface cost. This is analogous to a HOP Count in the RIP routing protocol.</p>
Restrictions	User Account Command Level – Administrator and Operator

Routing information source – OSPF and the Static Route table. Routing information will be redistributed to RIP. The following table lists the allowed values for the routing metrics and the types (or forms) of the routing information that will be redistributed.

Route Source	Metric	
OSPF	0 to 16	all type_1 type_2 inter+e1 inter+e2 external internal
Static	0 to 16	not applicable

Entering the **Type** combination – **internal type\_1 type\_2** is functionally equivalent to **all**. Entering the combination **type\_1 type\_2** is functionally equivalent to **external**. Entering the combination **internal external** is functionally equivalent to **all**.

Entering the metric **0** specifies transparency.

Example usage:

To add route redistribution settings

```
DES-3800:admin#create route redistribute dst rip src ospf all metric 2
Command: create route redistribute dst rip src ospf all metric 2
```

Success.

```
DES-3800:admin#
```

## config route redistribute dst ospf src

Purpose	Used configure route redistribution settings for the exchange of RIP routes to OSPF routes on the Switch.
Syntax	<b>config route redistribute dst ospf src [static   rip   local] {mettype [1   2]   metric &lt;value 0-16777214&gt;}</b>
Description	Route redistribution allows routers on the network – that are running different routing protocols to exchange routing information. This is accomplished by comparing the routes stored in the various router's routing tables and assigning appropriate metrics. This information is then exchanged among the various routers according to the individual routers current routing protocol. The switch can redistribute routing information between the OSPF and RIP routing protocols to all routers on the network that are running OSPF or RIP. Routing information entered into the Static Routing Table on the local switch is also redistributed.
Parameters	<p><i>src</i> [static   rip   local] – Allows the selection of the protocol of the source device.</p> <p><i>mettype</i> – allows the selection of one of the methods for calculating the metric value.</p> <ul style="list-style-type: none"> <li>Type - 1 calculates the metric (for RIP to OSPF) by adding the destination's interface cost to the metric entered in the Metric field.</li> <li>Type - 2 uses the metric entered in the Metric field without change. This field applies only when the destination field is OSPF.</li> </ul> <p><i>metric</i> &lt;value 0-16777214&gt; – Allows the entry of an OSPF interface cost. This is analogous to a Hop Count in the RIP routing protocol.</p>
Restrictions	User Account Command Level – Administrator and Operator

Routing information source – RIP: the Static Route table, and the Local interface routing information. Routing information will be redistributed to OSPF. The following table lists the allowed values for the routing metrics and the types (or forms) of the routing information that will be redistributed.

Route Source	Metric	Metric Type
RIP	0 to 16777214	mettype 1 mettype 2
Static	0 to 16777214	mettype 1 mettype 2
Local	0 to 16777214	mettype 1 mettype 2

Allowed Metric Type combinations are **mettype 1** or **mettype 2**. The metric value **0** above will be redistributed in OSPF as the metric **20**.

Example usage:

To configure route redistributions:

```
DES-3800:admin#config route redistribute dst ospf src all metric 2
Command: config route redistribute dst ospf src all metric 2

Success.

DES-3800:admin#
```

## config route redistribute dst rip src

Purpose	Used configure route redistribution settings for the exchange of RIP routes to OSPF routes on the Switch.
Syntax	<b>config route redistribute dst rip src [local   static   ospf {all   internal   external   type_1   type_2   inter+e1   inter+e2}] {metric &lt;value 0-16&gt;}</b>
Description	Route redistribution allows routers on the network that are running different routing protocols to exchange routing information. This is accomplished by comparing the routes stored in the various router's routing tables and assigning appropriate metrics. This information is then exchanged among the various routers according to the individual routers current routing protocol. The Switch can redistribute routing information between the OSPF and RIP routing protocols to all routers on the network that are running OSPF or RIP. Routing information entered into the Static Routing Table on the local switch is also redistributed.
Parameters	<p><b>src</b> - Allows the selection of the protocol of the source device, as being either local, static or OSPF. After selecting the source device, the user may set the following parameters for that source device from the following options:</p> <ul style="list-style-type: none"> <li><i>all</i> – Specifies both internal an external.</li> <li><i>internal</i> – Specifies the internal protocol of the source device.</li> <li><i>external</i> - Specifies the external protocol of the source device.</li> <li><i>type_1</i> - Calculates the metric (for RIP to OSPF) by adding the destination's interface cost to the metric entered in the Metric field.</li> <li><i>type_2</i> - Uses the metric entered in the Metric field without change. This field applies only when the destination field is OSPF.</li> <li><i>inter+e1</i> – Specifies the internal protocol AND type 1 of the external protocol.</li> <li><i>inter+e2</i> – Specifies the internal protocol AND type 2 of the external protocol.</li> </ul> <p><i>metric &lt;value 0-16&gt;</i> – Allows the entry of an OSPF interface cost. This is analogous to a Hop Count in the RIP routing protocol.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure route redistributions:

```
DES-3800:admin#config route redistribute dst ospf src rip mettype type_1 metric 2
Command: config route redistribute dst ospf src rip mettype type_1 metric 2

Success.

DES-3800:admin#
```

**delete route redistribute**

Purpose	Used to delete an existing route redistribute configuration on the Switch.
Syntax	<b>delete route redistribute {dst [rip   ospf] src [rip   static   local   ospf]}</b>
Description	This command will delete the route redistribution settings on this switch.
Parameters	<i>dst [rip   ospf]</i> – Allows the selection of the protocol on the destination device. The user may choose between RIP and OSPF. <i>src [rip   static   local   ospf]</i> – Allows the selection of the protocol on the source device. The user may choose between RIP, static, local or OSPF.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To delete route redistribution settings:

```
DES-3800:admin#delete route redistribute dst rip src ospf
Command: delete route redistribute dst rip src ospf

Success.

DES-3800:admin#
```

**show route redistribute**

Purpose	Used to display the route redistribution on the Switch.
Syntax	<b>show route redistribute {dst [rip   ospf]   src [rip   static   local   ospf]}</b>
Description	Displays the current route redistribution settings on the Switch.
Parameters	<i>src [rip   static   local   ospf]</i> – Allows the selection of the routing protocol on the source device. The user may choose between RIP, static, local or OSPF. <i>dst [rip   ospf]</i> – Allows the selection of the routing protocol on the destination device. The user may choose between RIP and OSPF.
Restrictions	User Account Command Level – All

Example usage:

To display route redistributions:

```
DES-3800:admin#show route redistribute
Command: show route redistribute

Source Protocol Destination Type Metric
-----
STATIC RIP All 1
LOCAL OSPF Type-2 20

Total Entries : 2

DES-3800:admin#
```

**DNS COMMANDS**

The DNS relay commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config dnsr	[[primary   secondary] nameserver <ipaddr>   [add   delete] static <domain_name 32> <ipaddr>]
enable dnsr	{cache   static}
disable dnsr	{cache   static}
show dnsr	{static}

Each command is listed, in detail, in the following sections.

<b>config dnsr</b>	
Purpose	Used to configure the DNS relay function.
Syntax	<b>config dnsr [[primary   secondary] nameserver &lt;ipaddr&gt;   [add   delete] static &lt;domain_name 32&gt; &lt;ipaddr&gt;]</b>
Description	This command is used to configure the DNS relay function on the Switch.
Parameters	<p><i>primary</i> – Indicates that the IP address below is the address of the primary DNS server.</p> <p><i>secondary</i> – Indicates that the IP address below is the address of the secondary DNS server.</p> <p><i>nameserver &lt;ipaddr&gt;</i> – The IP address of the DNS nameserver.</p> <p><i>[add   delete]</i> – Indicates whether to add or delete the DNS relay function.</p> <p><i>&lt;domain_name 32&gt;</i> – The domain name of the entry.</p> <p><i>&lt;ipaddr&gt;</i> – The IP address of the entry.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To set IP address 10.43.21.12 of primary.

```
DES-3800:admin#config dnsr primary 10.43.21.12
Command: config dnsr primary 10.43.21.12

Success

DES-3800:admin#
```

Example usage:

To add an entry domain name dns1, IP address 10.43.21.12 to DNS static table:

```
DES-3800:admin#config dnsr add static dns1 10.43.21.12
Command: config dnsr add static dns1 10.43.21.12

Success.

DES-3800:admin#
```

Example usage:

To delete an entry domain name dns1, IP address 10.43.21.12 from DNS static table.

```
DES-3800:admin#config dnsr delete static dns1 10.43.21.12
Command: config dnsr delete static dns1 10.43.21.12

Success.

DES-3800:admin#
```

## enable dnsr

Purpose	Used to enable DNS relay.
Syntax	<b>enable dnsr {cache   static}</b>
Description	This command is used, in combination with the <b>disable dnsr</b> command below, to enable and disable DNS Relay on the Switch.
Parameters	<p><i>cache</i> - This parameter will allow the user to enable the cache lookup for the DNS rely on the Switch.</p> <p><i>static</i> - This parameter will allow the user to enable the static table lookup for the DNS rely on the Switch.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable status of DNS relay:

```
DES-3800:admin#enable dnsr
Command: enable dnsr

Success.

DES-3800:admin#
```

Example usage:

To enable cache lookup for DNS relay.

```
DES-3800:admin#enable dnsr cache
Command: enable dnsr cache

Success.

DES-3800:admin#
```

Example usage:

To enable static table lookup for DNS relay.

```
DES-3800:admin#enable dnsr static
Command: enable dnsr static

Success.

DES-3800:admin#
```

## disable dnsr

Purpose	Used to disable DNS relay on the Switch.
Syntax	<b>disable dnsr {cache   static}</b>
Description	This command is used, in combination with the <b>enable dnsr</b> command above, to enable and disable DNS Relay on the Switch.
Parameters	<i>cache</i> – This parameter will allow the user to disable the cache lookup for the DNS relay on the Switch. <i>static</i> – This parameter will allow the user to disable the static table lookup for the DNS relay on the Switch.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable status of DNS relay.

```
DES-3800:admin#disable dnsr
Command: disable dnsr

Success.

DES-3800:admin#
```

Example usage:

To disable cache lookup for DNS relay.

```
DES-3800:admin#disable dnsr cache
Command: disable dnsr cache

Success.

DES-3800:admin#
```

Example usage:

To disable static table lookup for DNS relay.

```
DES-3800:admin#disable dnsr static
Command: disable dnsr static

Success.

DES-3800:admin#
```

## show dnsr

Purpose	Used to display the current DNS relay status.
Syntax	<b>show dnsr {static}</b>
Description	This command is used to display the current DNS relay status.
Parameters	<i>static</i> – Allows the display of only the static entries into the DNS relay table. If this parameter is omitted, the entire DNS relay table will be displayed.
Restrictions	User Account Command Level – All

Example usage:

To display DNS relay status:

```
DES-3800:admin#show dnsr
Command: show dnsr

DNSR Status           : Disabled
Primary Name Server   : 0.0.0.0
Secondary Name Server  : 0.0.0.0
DNSR Cache Status     : Disabled
DNSR Static Cache Table Status : Disabled

DNS Relay Static Table

Domain Name           IP Address
-----
www.123.com.tw        10.12.12.123
bbs.ntu.edu.tw        140.112.1.23

Total Entries: 2

DES-3800:admin#
```

**RIP COMMANDS**

The RIP commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config rip	[ipif <ipif_name 12>   all] {authentication [enable <password 16>   disable]   tx_mode [disable   v1_only   v1_compatible   v2_only]   rx_mode [v1_only   v2_only   v1_or_v2   disable] state [enable   disable]}
enable rip	
disable rip	
show rip	ipif <ipif_name 12>

Each command is listed, in detail, in the following sections.

**config rip**

Purpose	Used to configure RIP on the Switch.
Syntax	<b>config rip [ipif &lt;ipif_name 12&gt;   all] {authentication [enable &lt;password 16&gt;   disable]   tx_mode [disable   v1_only   v1_compatible   v2_only]   rx_mode [v1_only   v2_only   v1_or_v2   disable] state [enable   disable]}</b>
Description	This command is used to configure RIP on the Switch.
Parameters	<p><i>&lt;ipif_name 12&gt;</i> – The name of the IP interface.</p> <p><i>all</i> – To configure all RIP receiving mode for all IP interfaces.</p> <p><i>authentication [enable   disable]</i> – Enables or disables authentication for RIP on the Switch.</p> <ul style="list-style-type: none"> <li>• <i>&lt;password 16&gt;</i> – Allows the specification of a case-sensitive password.</li> </ul> <p><i>tx_mode</i> – Determines how received RIP packets will be interpreted – as RIP version <i>V1 only</i>, <i>V2 Only</i>, or <i>V1 Compatible (V1 and V2)</i>. This entry specifies which version of the RIP protocol will be used to transfer RIP packets. The disabled entry prevents the reception of RIP packets.</p> <ul style="list-style-type: none"> <li>• <i>disable</i> – Prevents the transmission of RIP packets.</li> <li>• <i>v1_only</i> – Specifies that only RIP v1 packets will be transmitted.</li> <li>• <i>v1_compatible</i> – Specifies that only RIP v1 compatible packets will be transmitted.</li> <li>• <i>v2_only</i> - Specifies that only RIP v2 packets will be transmitted.</li> </ul> <p><i>rx_mode</i> – Determines how received RIP packets will be interpreted – as RIP version <i>V1 only</i>, <i>V2 Only</i>, or <i>V1 or V2</i>. This entry specifies which version of the RIP protocol will be used to receive RIP packets. The Disabled entry prevents the reception of RIP packets.</p> <ul style="list-style-type: none"> <li>• <i>v1_only</i> – Specifies that only RIP v1 packets will be transmitted.</li> <li>• <i>v2_only</i> - Specifies that only RIP v2 packets will be transmitted.</li> <li>• <i>v1_or_v2</i> - Specifies that only RIP v1 or v2 packets will be transmitted.</li> </ul> <p><i>state [enable   disable]</i> – Allows RIP to be enabled and disabled on the Switch.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To change the RIP receive mode for the IP interface System:

```
DES-3800:admin#config rip ipif System rx_mode v1_only
Command: config rip ipif System rx_mode v1_only

Success.

DES-3800:admin#
```

## enable rip

Purpose	Used to enable RIP.
Syntax	<b>enable rip</b>
Description	This command is used to enable RIP on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable RIP:

```
DES-3800:admin#enable rip
Command: enable rip

Success.

DES-3800:admin#
```

## disable rip

Purpose	Used to disable RIP.
Syntax	<b>disable rip</b>
Description	This command is used to disable RIP on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable RIP:

```
DES-3800:admin#disable rip
Command: disable rip

Success.

DES-3800:admin#
```

**show rip**

Purpose	Used to display the RIP configuration and statistics for the Switch.
Syntax	<b>show rip {ipif &lt;ipif_name 12&gt;}</b>
Description	This command will display the RIP configuration and statistics for a given IP interface or for all IP interfaces.
Parameters	<i>ipif &lt;ipif_name 12&gt;</i> – The name of the IP interface for which to display the RIP configuration and settings. If this parameter is not specified, the <b>show rip</b> command will display the global RIP configuration for the Switch.
Restrictions	User Account Command Level – All

Example usage:

To display RIP configuration:

```
DES-3800:admin#show rip
Command: show rip

RIP Global State : Disabled

RIP Interface Settings

Interface   IP Address   TX Mode   RX Mode   Authen-   State
-----
System      10.41.44.33/8  Disabled  Disabled  Disabled  Disabled

Total Entries : 1

DES-3800:admin#
```

Example usage:

To display RIP configurations by IP interface:

```
DES-3800:admin#show rip ipif System
Command: show rip ipif System

Interface Name: System
IP Address/Netmask: 10.53.13.33/8 (Link Up)
Interface Metric: 1 (Default)
Administrative State: Disabled
TX Mode: V2 Only
RX Mode: V1 or V2
Authentication: Disabled

Total Entries: 1

DES-3800:admin#
```

**DVMRP COMMANDS**

The DVMRP commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config dvmrp	[ipif <ipif_name 12>   all] {metric <value 1-31>   probe <sec 1-65535>   neighbor_timeout <sec 1-65535>   state [enable   disable]}
enable dvmrp	
disable dvmrp	
show dvmrp neighbor	{ipif <ipif_name 12>   ipaddress <network_address>}
show dvmrp nexthop	{ipaddress <network_address>   ipif <ipif_name 12>}
show dvmrp routing_table	{ipaddress <network_address>}
show dvmrp	{ipif <ipif_name 12>}

Each command is listed, in detail, in the following sections.

**config dvmrp**

Purpose	Used to configure DVMRP on the Switch.
Syntax	<b>config dvmrp [ipif &lt;ipif_name 12&gt;   all] {metric &lt;value 1-31&gt;   probe &lt;sec 1-65535&gt;   neighbor_timeout &lt;sec 1-65535&gt;   state [enable   disable]}</b>
Description	This command is used to configure DVMRP on the Switch.
Parameters	<p><i>ipif &lt;ipif_name 12&gt;</i> – The name of the IP interface for which DVMRP is to be configured.</p> <p><i>all</i> – Specifies that DVMRP is to be configured for all IP interfaces on the Switch.</p> <p><i>metric &lt;value 1-31&gt;</i> – Allows the assignment of a DVMRP route cost to the above IP interface. A DVMRP route cost is a relative number that represents the real cost of using this route in the construction of a multicast delivery tree. It is similar to, but not defined as, the hop count in RIP. The default is 1.</p> <p><i>probe &lt;second 1-65535&gt;</i> – DVMRP defined an extension to IGMP that allows routers to query other routers to determine if a DVMRP neighbor is present on a given subnetwork or not. This is referred to as a 'probe'. This entry will set an intermittent probe (in seconds) on the device that will transmit dvmrp messages, depending on the time specified. This probe is also used to "keep alive" the connection between DVMRP enabled devices. The default value is 10 seconds.</p> <p><i>neighbor_timeout &lt;second 1-65535&gt;</i> – The time period for which DVMRP will hold Neighbor Router reports before issuing poison route messages. The default value is 35 seconds.</p> <p><i>state [enable   disable]</i> – Allows DVMRP to be enabled or disabled.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure DVMRP configurations of IP interface System:

```
DES-3800:admin#config dvmrp ipif System neighbor_timeout 30 metric 1 probe 5
Command: config dvmrp ipif System neighbor_timeout 30 metric 1 probe 5

Success

DES-3800:admin#
```

## enable dvmrp

Purpose	Used to enable DVMRP.
Syntax	<b>enable dvmrp</b>
Description	This command, in combination with the <b>disable dvmrp</b> command below, is used to enable and disable DVMRP on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable DVMRP:

```
DES-3800:admin#enable dvmrp
Command: enable dvmrp

Success.

DES-3800:admin#
```

## disable dvmrp

Purpose	Used to disable DVMRP.
Syntax	<b>disable dvmrp</b>
Description	This command is used, in combination with the <b>enable dvmrp</b> command above, is used to enable and disable DVMRP on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable DVMRP:

```
DES-3800:admin#disable dvmrp
Command: disable dvmrp

Success.

DES-3800:admin#
```

**show dvmrp routing\_table**

Purpose	Used to display the current DVMRP routing table.
Syntax	<b>show dvmrp routing table [ipaddress &lt;network_address&gt;]</b>
Description	The command is used to display the current DVMRP routing table.
Parameters	<i>ipaddress &lt;network_address&gt;</i> – The IP address and netmask of the destination. The address and mask information can be specified using the traditional format (for example, 10.1.2.3/255.0.0.0 or in CIDR format, 10.1.2.3/8).
Restrictions	User Account Command Level – All

Example usage:

To display DVMRP routing table:

```
DES-3800:admin#show dvmrp routing_table
Command: show dvmrp routing_table

DVMRP Routing Table
Source Address/Netmask  Upstream Neighbor  Metric  Learned  Interface  Expire
-----
10.0.0.0/8              10.90.90.90        2       Local    System     -
20.0.0.0/8              20.1.1.1           2       Local    ip2        117
30.0.0.0/8              30.1.1.1           2       Dynamic  ip3        106

Total Entries: 3

DES-3800:admin#
```

**show dvmrp neighbor**

Purpose	Used to display the DVMRP neighbor table.
Syntax	<b>show dvmrp neighbor {ipif &lt;ipif_name 12&gt;   ipaddress &lt;network_address&gt;}</b>
Description	This command will display the current DVMRP neighbor table.
Parameters	<i>&lt;ipif_name 12&gt;</i> – The name of the IP interface for which to display the DVMRP neighbor table.  <i>ipaddress &lt;network_address&gt;</i> – The IP address and netmask of the destination. The address and mask information can be specified using the traditional format (for example, 10.1.2.3/255.0.0.0 or in CIDR format, 10.1.2.3/8).
Restrictions	User Account Command Level – All

Example usage:

To display DVMRP neighbor table:

```
DES-3800:admin#show dvmrp neighbor
```

```
Command: show dvmrp neighbor
```

#### DVMRP Neighbor Address Table

Interface	Neighbor Address	Generation ID	Expire Time
System	10.2.1.123	2	35

```
Total Entries: 1
```

```
DES-3800:admin#
```

## show dvmrp nexthop

Purpose	Used to display the current DVMRP routing next hop table.
Syntax	<b>show dvmrp nexthop {ipaddress &lt;network_address&gt;   ipif &lt;ipif_name 12&gt;}</b>
Description	This command will display the DVMRP routing next hop table.
Parameters	<p><i>&lt;ipif_name 12&gt;</i> – The name of the IP interface for which to display the current DVMRP routing next hop table.</p> <p><i>ipaddress &lt;network_address&gt;</i> – The IP address and netmask of the destination. The address and mask information can be specified using the traditional format (for example, 10.1.2.3/255.0.0.0 or in CIDR format, 10.1.2.3/8).</p>
Restrictions	User Account Command Level – All

Example usage:

To display DVMRP routing next hop table:

```
DES-3800:admin#show dvmrp nexthop
```

```
Command: show dvmrp nexthop
```

Source IP Address/Netmask	Interface Name	Type
10.0.0.0/8	ip2	Leaf
10.0.0.0/8	ip3	Leaf
20.0.0.0/8	System	Leaf
20.0.0.0/8	ip3	Leaf
30.0.0.0/8	System	Leaf
30.0.0.0/8	ip2	Leaf

```
Total Entries: 6
```

```
DES-3800:admin#
```

## show dvmrp

Purpose	Used to display the current DVMRP settings on the Switch.
Syntax	<b>show dvmrp {&lt;ipif_name 12&gt;}</b>
Description	The command will display the current DVMRP routing table.
Parameters	<i>&lt;ipif_name 12&gt;</i> – This parameter will allow the user to display DVMRP settings for a specific IP interface.
Restrictions	User Account Command Level – All

Example usage:

To show DVMRP configurations:

```
DES-3800:admin#show dvmrp
Command: show dvmrp

DVMRP Global State : Disabled

Interface  IP Address      Neighbor Timeout  Probe  Metric  State
-----
System    10.90.90.90/8    35                10     1       Disabled
Trinity    12.1.1.1/8       35                10     1       Enabled

Total Entries: 1

DES-3800:admin#
```

## PIM COMMANDS

PIM or *Protocol Independent Multicast* is a method of forwarding traffic to multicast groups over the network using any pre-existing unicast routing protocol, such as RIP or OSPF, set on routers within a multicast network. The xStack DES-3800 switch series supports two types of PIM, Dense Mode (PIM-DM) and Sparse Mode (PIM-SM).

### PIM-SM

PIM-SM or *Protocol Independent Multicast – Sparse Mode* is a method of forwarding multicast traffic over the network only to multicast routers who actually request this information. Unlike most multicast routing protocols which flood the network with multicast packets, PIM-SM will forward traffic to routers who are explicitly a part of the multicast group through the use of a Rendezvous Point (RP). This RP will take all requests from PIM-SM enabled routers, analyze the information and then returns multicast information it receives from the source, to requesting routers within its configured network. Through this method, a distribution tree is created, with the RP as the root. This distribution tree holds all PIM-SM enabled routers within which information collected from these router is stored by the RP.

Two other types of routers also exist with the PIM-SM configuration. When many routers are a part of a multiple access network, a Designated Router (DR) will be elected. The DR's primary function is to send Join/Prune messages to the RP. The router with the highest priority on the LAN will be selected as the DR. If there is a tie for the highest priority, the router with the higher IP address will be chosen.

The third type of router created in the PIM-SM configuration is the Boot Strap Router (BSR). The goal of the Boot Strap Router is to collect and relay RP information to PIM-SM enabled routers on the LAN. Although the RP can be statically set, the BSR mechanism can also determine the RP. Multiple Candidate BSRs (C-BSR) can be set on the network but only one BSR will be elected to process RP information. If it is not explicitly apparent which C-BSR is to be the BSR, all C-BSRs will emit Boot Strap Messages (BSM) out on the PIM-SM enabled network to determine which C-BSR has the higher priority and once determined, will be elected as the BSR. Once determined, the BSR will collect RP data emanating from candidate RPs on the PIM-SM network, compile it and then send it out on the land using periodic Boot Strap Messages (BSM). All PIM-SM Routers will get the RP information from the Boot Strap Mechanism and then store it in their database.

### Discovering and Joining the Multicast Group

Although Hello packets discover PIM-SM routers, these routers can only join or be “pruned” from a multicast group through the use of Join/Prune Messages exchanged between the DR and RP. Join/Prune Messages are packets relayed between routers that effectively state which interfaces are, or are not to be receiving multicast data. These messages can be configured for their frequency to be sent out on the network and are only valid to routers if a Hello packet has first been received. A Hello packet will simply state that the router is present and ready to become a part of the RP's distribution tree. Once a router has accepted a member of the IGMP group and it is PIM-SM enabled, the interested router will then send an explicit Join/Prune message to the RP, which will in turn route multicast data from the source to the interested router, resulting in a unidirectional distribution tree for the group. Multicast packets are then sent out to all nodes on this tree. Once a prune message has been received for a router that is a member of the RP's distribution tree, the router will drop the interface from its distribution tree.

### Distribution Trees

Two types of distribution trees can exist within the PIM-SM protocol, a Rendezvous-Point Tree (RPT) and a Shortest Path Tree (SPT). The RP will send out specific multicast data that it receives from the source to all outgoing interfaces enabled to receive multicast data. Yet, once a router has determined the location of its source, an SPT can be created, eliminating hops between the source and the destination, such as the RP. This can be configured by the switch administrator by setting the multicast data rate threshold. Once the threshold has been passed, the data path will switch to the SPT. Therefore, a closer link can be created between the source and destination, eliminating hops previously used and shortening the time a multicast packet is sent from the source to its final destination.

### Register and Register Suppression Messages

Multicast sources do not always join the intended receiver group. The first hop router (DR) can send multicast data without being the member of a group or having a designated source, which essentially means it has no information about how to relay this information to the RP distribution tree. This problem is alleviated through Register and Register-Stop messages. The first multicast packet received by the DR is encapsulated and sent on to the RP which in turn removes the encapsulation and sends the packet on down the RP distribution tree. When the route has been established, a SPT can be created to directly connect routers to the source, or the multicast traffic flow can begin, traveling from the DR to the RP. When the latter occurs, the same packet may be sent twice, one type encapsulated, one not. The RP will detect this flaw and then return a Register Suppression message to the DR requesting it to discontinue sending encapsulated packets.

## Assert Messages

At times on the PIM-SM enabled network, parallel paths are created from source to receiver, meaning some receivers will receive the same multicast packets twice. To improve this situation, Assert messages are sent from the receiving device to both multicast sources to determine which single router will send the receiver the necessary multicast data. The source with the shortest metric (hop count) will be elected as the primary multicast source. This metric value is included within the Assert message.

## PIM-DM

The *Protocol Independent Multicast - Dense Mode* (PIM-DM) protocol should be used in networks with a low delay (low latency) and high bandwidth as PIM-DM is optimized to guarantee delivery of multicast packets, not to reduce overhead.

The PIM-DM multicast routing protocol assumes that all downstream routers want to receive multicast messages and relies upon explicit prune messages from downstream routers to remove branches from the multicast delivery tree that do not contain multicast group members.

PIM-DM has no explicit 'join' messages. It relies upon periodic flooding of multicast messages to all interfaces and then either waiting for a timer to expire (the **Join/Prune Interval**) or for the downstream routers to transmit explicit 'prune' messages indicating that there are no multicast members on their respective branches. PIM-DM then removes these branches ('prunes' them) from the multicast delivery tree.

Because a member of a pruned branch of a multicast delivery tree may want to join a multicast delivery group (at some point in the future), the protocol periodically removes the 'prune' information from its database and floods multicast messages to all interfaces on that branch. The interval for removing 'prune' information is the **Join/Prune Interval**.

The PIM commands in the Command Line Interface(CLI) are listed below, along with their appropriate parameters, in the following table.

Command	Parameters
enable pim	
disable pim	
config pim	[[ipif <ipif_name 12>   all] {hello <sec 1-18724>   jp_interval <sec 1-18724>   state [enable   disable]   mode [dm   sm]   dr_priority <unsigned_int 0 – 4294967294>}
config pim register_probe_time	<value 1-127>
config pim register_suppression_time	<value 3-255>
create pim crp group	<ip_addr/netmask> rp <ipif_name 12>
delete pim crp group	<ip_addr/netmask>
config pim crp	{holdtime <value 0-255>   priority <value 0-255>   wildcard_prefix_cnt [0   1]}
create pim static_rp group	<ip_addr/netmask> rp <ipaddr>
delete pim static_rp group	<ip_addr/netmask>
show pim static_rp	
config pim rp_spt_threshold	[<value 0-256>   infinity]
config pim last_hop_spt_threshold	[<value 0-256>   infinity]
show pim rpset	
show pim crp	
config pim cbsr	[ipif <ipif_name 12> {priority [-1   <value 0-255>]}   hash_masklen <value 0-32>   bootstrap_period <value 1-255>]
show pim cbsr	{ipif <ipif_name 12>}
show pim	{ipif <ipif_name 12>}

Command	Parameters
show pim neighbor	{ipif <ipif_name 12>   ipaddress <network_address>}
show pim ipmroute	
create pim register_checksum_include_data rp_address	<ipaddr>
delete pim register_checksum_include_data rp_address	<ipaddr>
show pim register_checksum_include_data_rp_list	
show pim active_rp	{group <multicast_ipaddr>}

Each command is listed, in detail, in the following sections.

## enable pim

Purpose	Used to enable the PIM function on the Switch.
Syntax	<b>enable pim</b>
Description	This command will enable PIM for the Switch. PIM settings must first be configured for specific IP interfaces using the <b>config pim</b> command.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To enable PIM as previously configured on the Switch:

```
DES-3800:admin#enable pim
Command: enable pim

Success.

DES-3800:admin#
```

## disable pim

Purpose	Used to disable PIM function on the Switch.
Syntax	<b>disable pim</b>
Description	This command will disable PIM for the Switch. Any previously configured PIM settings will remain unchanged and may be enabled at a later time with the <b>enable pim</b> command.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To disable PIM on the Switch:

```
DES-3800:admin#disable pim
Command: disable pim

Success.

DES-3800:admin#
```

## config pim

Purpose	Used to configure the parameters for the PIM protocol.
Syntax	<b>config pim [[ipif &lt;ipif_name 12&gt;   all] {hello &lt;sec 1-18724&gt;   jp_interval &lt;sec 1-18724&gt;   state [enable   disable]   mode [dm   sm]   dr_priority &lt;unsigned_int 0 – 4294967294&gt;}]</b>
Description	This command will configure the general settings for the PIM protocol per IP interface, including choice of PIM mode, Designated Router priority and various timers.
Parameters	<p><i>ipif &lt;ipif_name 12&gt;</i> - Enter an IP interface for which to configure the PIM settings. This name cannot exceed 12 alphanumeric characters.</p> <p><i>all</i> – Select this parameter to configure PIM settings for all IP interfaces on the Switch.</p> <p><i>hello &lt;sec 1-18724&gt;</i> - Used to set the interval time between the sending of Hello Packets from this IP interface to neighboring routers one hop away. These Hello packets are used to discover other PIM enabled routers and state their priority as the Designated Router (DR) on the PIM enabled network. The user may state an interval time between 1 – 18724 seconds with a default interval time of 30 seconds.</p> <p><i>jp_interval &lt;sec 1-18724&gt;</i> - This field will set the interval time between the sending of Join/Prune packets stating which multicast groups are to join the PIM enabled network and which are to be removed or “pruned” from that group. The user may state an interval time between 1 – 18724 seconds with a default interval time of 30 seconds.</p> <p><i>state [enable   disable]</i> - Used to enable or disable PIM for this IP interface. The default is Disabled.</p> <p><i>mode [dm   sm]</i> - Used to select the type of PIM protocol to use, Sparse Mode (SM) or Dense Mode (DM). The default setting is DM.</p> <p><i>dr_priority &lt;unsigned_int 0 – 4294967294&gt;</i> - Enter the priority of this IP interface to become the Designated Router for the multiple access network. The user may enter a DR priority between 0 and 4,294,967,294 with a default setting of 1.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure the PIM settings for an IP interface:

```
DES-3800:admin#config pim ipif Trinity hello 60 jp_interval 60 state enable mode
sm dr_priority 2
Command: config pim ipif Trinity hello 60 jp_interval 60 state enable mode sm
dr_priority 2

Success.

DES-3800:admin#
```

**config pim register\_probe\_time**

Purpose	Used to set a time to send a probe message from the DR to the RP before the Register Suppression time expires.
Syntax	<b>config pim register_probe_time &lt;value 1-127&gt;</b>
Description	This command is used to set a time to send a probe message from the DR to the RP before the Register Suppression time expires. If a Register Stop message is received by the DR, the Register Suppression Time will be restarted. If no Register Stop message is received within the probe time, Register Packets will be resent to the RP. This command is for PIM-SM configurations only.
Parameters	<value 1-127> - Configure this field to set a time to send a probe message from the DR to the RP before the Register Suppression time expires. The user may configure a time between 1-127 seconds with a default setting of 5 seconds.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure the register probe time:

```
DES-3800:admin#config pim register_probe_time 5
Command: config pim register_probe_time 5

Success.

DES-3800:admin#
```

**config pim register\_suppression\_time**

Purpose	Used to configure the interval between the sending of register packets for the PIM protocol.
Syntax	<b>config pim register_suppression_time &lt;value 3-255&gt;</b>
Description	This command is to be configured for the first hop router from the source. After this router sends out a register message to the RP, and the RP replies with a register stop message, it will wait for the time configured here to send out another register message to the RP. This command is for PIM-SM configurations only.
Parameters	<value 3-255> - The user may set an interval time between 3-255 with a default setting of 60 seconds for the sending of register suppression time packets. The default value is 60 seconds.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure the register suppression time:

```
DES-3800:admin#config pim register_suppression_time 15
Command: config pim register_suppression_time 15

Success.

DES-3800:admin#
```

**NOTE:** The Probe time value must be less than half of the Register Suppression Time value. If not, the administrator will be presented with a Fail message.

## create pim crp

Purpose	To enable the Switch to become a candidate to be the Rendezvous Point (RP).
Syntax	<b>create pim crp group &lt;ip_addr/netmask&gt; rp &lt;ipif_name 12&gt;</b>
Description	This command will set the parameters for the switch to become a candidate RP. This command is for PIM-SM configurations only.
Parameters	<p><i>group &lt;ip_addr/netmask&gt;</i> - Enter the multicast group address for this switch to become a Candidate RP. This address must be a class D address.</p> <p><i>rp &lt;ipif_name 12&gt;</i> - Enter the name of the PIM-SM enabled interface the switch administrator wishes to become the CRP for this group.</p>
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To create an IP interface to become a Candidate RP on the Switch:

```
DES-3800:admin#create pim crp group 231.0.0.1/32 rp Trinity
Command: create pim crp group 231.0.0.1/32 rp Trinity

Success.

DES-3800:admin#
```

## delete pim crp

Purpose	To disable the Switch in becoming a possible candidate to be the Rendezvous Point (RP).
Syntax	<b>delete pim crp group &lt;ip_addr/netmask&gt;</b>
Description	This command remove the switch's status of Candidate RP. This command is for PIM-SM configurations only.
Parameters	<i>group &lt;ip_addr/netmask&gt;</i> - Enter the multicast group address for this switch to be removed from being a Candidate RP. This address must be a class D address.
Restrictions	Only administrator-level users can use this command.

Usage example:

To delete an IP interface from becoming a Candidate RP on the Switch:

```
DES-3800:admin#delete pim crp group 231.0.0.1/32
Command: delete pim crp group 231.0.0.1/32

Success.

DES-3800:admin#
```

**config pim crp**

Purpose	To configure the Candidate RP settings that will determine the RP.
Syntax	<b>config pim crp {holdtime &lt;value 0-255&gt;   priority &lt;value 0-255&gt;   wildcard_prefix_cnt [0   1]}</b>
Description	This command will configure parameters regarding the Candidate RP on the Switch, including hold time, priority and wildcard prefix count. This command is for PIM-SM configurations only.
Parameters	<p><i>holdtime &lt;value 0-255&gt;</i> - This field is used to set the time Candidate RP (CRP) advertisements are valid on the PIM-SM enabled network. If CRP advertisements are not received by the BSR within this time frame, the CRP is removed from the list of candidates. The user may set a time between 0 - 255 seconds with a default setting of 150 seconds. An entry of 0 will send out one advertisement that states to the BSR that it should be immediately removed from CRP status on the PIM-SM network.</p> <p><i>priority &lt;value 0-255&gt;</i> - Enter a priority value to determine which CRP will become the RP for the distribution tree. This priority value will be included in the router's CRP advertisements. A lower value means a higher priority, yet, if there is a tie for the highest priority, the router having the higher IP address will become the RP. The user may set a priority between 0 – 255 with a default setting of 0.</p> <p><i>wildcard_prefix_cnt [0   1]</i> - The user may set the Prefix Count value of the wildcard group address here by choosing a value between 0 and 1 with a default setting of 0.</p>
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To configure the Candidate RP settings for the multiple access network:

```
DES-3800:admin#config pim crp holdtime 150 priority 2 wildcard_prefix_cnt 0
Command: config pim crp holdtime 150 priority 2 wildcard_prefix_cnt 0

Success.

DES-3800:admin#
```

**create pim static\_rp**

Purpose	Used to enter the multicast group IP address used in identifying the Rendezvous Point (RP).
Syntax	<b>create pim static_rp group &lt;ip_addr/netmask&gt; rp &lt;ipaddr&gt;</b>
Description	This command will enter the multicast group IP address which will be used to identify the RP. This entry must be a class D IP address. This command is for PIM-SM configurations only.
Parameters	<p><i>group &lt;ip_addr/netmask&gt;</i> - Enter the multicast group IP address used in determining the Static RP. This address must be a class D IP address.</p> <p><i>rp &lt;ipaddr&gt;</i> - Enter the IP address of the RP the switch administrator wishes to become the Static RP for this group.</p>
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To create the settings to determine a static RP:

```
DES-3800:admin#create pim static_rp group 231.0.0.1/32 rp 11.1.1.1
Command: create pim static_rp group 231.0.0.1/32 rp 11.1.1.1

Success.

DES-3800:admin#
```

## delete pim static\_rp

Purpose	To remove the multicast group IP address used in identifying the Rendezvous Point (RP).
Syntax	<b>delete pim static_rp group &lt;ip_addr/netmask&gt;</b>
Description	This command will remove the multicast group IP address used in identifying the Rendezvous Point (RP). This command is for PIM-SM configurations only.
Parameters	<i>group &lt;ip_addr/netmask&gt;</i> - Enter the multicast group IP address used in identifying the Rendezvous Point (RP). This address must be a class D address.
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To remove the multicast group IP address used in identifying the Rendezvous Point (RP).:

```
DES-3800:admin#delete pim static_rp group 231.0.0.1/32
Command: delete pim static_rp group 231.0.0.1/32

Success.

DES-3800:admin#
```

## show pim static\_rp

Purpose	To show the Static Rendezvous Point (RP) settings.
Syntax	<b>show pim static_rp</b>
Description	This command will display the Static Rendezvous Point (RP) settings. This command is for PIM-SM configurations only.
Parameters	None.
Restrictions	User Account Command Level – All

Usage example:

To display the static RP settings as configured for the multiple access network:

```
DES-3800:admin#show pim static_rp
```

```
Command: show pim static_rp
```

#### PIM Static RP Table

Group	RP Address
224.0.0.1/4	11.1.1.254
239.0.0.1/32	31.1.1.1
239.0.0.2/32	31.1.1.12
239.0.0.3/32	31.1.1.123

```
Total entries: 4
```

```
DES-3800:admin#
```

### config pim rp\_spt\_threshold

Purpose	Used to configure the threshold of register packets needed to enable the Shortest Path Tree (SPT).
Syntax	<b>config pim rp_spt_threshold [&lt;value 0-256&gt;   infinity]</b>
Description	This command will set the threshold of register packets needed to enable the Shortest Path Tree (SPT). When the amount of register packets per second reaches the configured threshold, it will trigger the RP to switch to an SPT, between the RP and the first hop router. This command is for PIM-SM configurations only.
Parameters	<p>&lt;value 0–256&gt; - Enter a value between 0 – 256 to determine the number of packets per second needed to Switch the path to a SPT. The default setting is 0. 0 denotes the router will enter the SPT immediately.</p> <p><i>infinity</i> - An entry of <i>infinity</i> will disable the RP from entering an SPT.</p>
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To set the SPT threshold:

```
DES-3800:admin# config pim rp_spt_threshold 200
```

```
Command: config pim rp_spt_threshold 200
```

```
Success.
```

```
DES-3800:admin#
```

### config last\_hop\_spt\_threshold

Purpose	Used to configure the packet threshold that the last hop router in the RP tree will use to change its path to a SPT.
Syntax	<b>config last_hop_spt_threshold [&lt;value 0-256&gt;   infinity]</b>
Description	This command will configure the threshold of multicast data packets needed to change the last hop router's distribution tree to a SPT. When the amount of multicast packets per second reaches the configured threshold, the last hop router will change its distribution tree to a (Shortest Path Tree) SPT. This command is for PIM-SM configurations only.
Parameters	<value 0 – 256> - Enter a value between 0 – 256 to determine the number of packets per second needed to Switch the path to a SPT. The

**config last\_hop\_spt\_threshold**

default setting is 0. 0 denotes that the router will immediately enter the SPT.

*infinity* - An entry of *infinity* will disable the last hop router from entering an SPT.

Restrictions User Account Command Level – Administrator and Operator

Usage example:

To configure the last hop router to never enter an SPT:

```
DES-3800:admin#config last_hop_spt_threshold 0
Command: config last_hop_spt_threshold 0

Success.

DES-3800:admin#
```

**show pim rpset**

Purpose	Used to display the RP Set of the Switch.
Syntax	<b>show pim rpset</b>
Description	This command will display the information regarding the RP Set learned by the BSR. This command is for PIM-SM configurations only.
Parameters	None.
Restrictions	User Account Command Level – All

Usage example:

To view the RP Set information:

```
DES-3800:admin# show pim rpset
Command: show pim rpset

Bootstrap Router: 12.43.51.81

Group Address      RP Address      Holdtime      Expired Time      Type
-----
224.0.0.1/4        31.43.51.81     150           107
Total Entries: 1

DES-3800:admin#
```

**show pim crp**

Purpose	Used to display the Candidate RP settings on the Switch, along with CRP parameters configured for the Switch.
Syntax	<b>show pim crp</b>
Description	This command will display the settings for Candidate RPs that are accessible to the switch. This command is for PIM-SM configurations only.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Usage Example:

To view the CRP settings:

```
DES-3800:admin# show pim crp
Command: show pim crp

PIM Candidate-RP Table

C-RP Holdtime           : 150
C-RP Priority            : 2
C-RP wildcard prefix count : 0

Group                   Interface
-----
224.0.0.1/4             Trinity

DES-3800:admin#
```

## config pim cbsr

Purpose	Used to configure the settings for the Candidate Bootstrap Router and the priority of the selected IP interface to become the Boot Strap Router (BSR) for the PIM-SM network domain.
Syntax	<b>config pim cbsr [ipif &lt;ipif_name 12&gt; {priority [-1   value 0-255&gt;]}   hash_masklen &lt;value 0-32&gt;   bootstrap_period &lt;value 1-255&gt;]</b>
Description	This command will configure the settings for the Candidate BSR. The Boot Strap Router holds the information which determines which router on the network is to be elected as the RP for the multicast group and then to distribute RP information to other PIM-SM enabled routers. This command is for PIM-SM configurations only.
Parameters	<p><i>ipif &lt;ipif_name 12&gt;</i> - Enter the ipif name of the interface to become the CBSR.</p> <p><i>priority [-1   value 0-255&gt;]</i> - Used to state the Priority of this IP Interface to become the BSR. The user may select a priority between -1 to 255. An entry of -1 states that the interface will be disabled to be the BSR.</p> <p><i>hash_masklen &lt;value 0-32&gt;</i> Enter a hash mask length, which will be used with the IP address of the candidate RP and the multicast group address, to calculate the hash algorithm used by the router to determine which CRP on the PIM-SM enabled network will be the RP. The user may select a length between 0 –32 with a default setting of 30. This parameter must be configured separately from the ipif settings of this command. See the examples below for a better understanding.</p> <p><i>bootstrap_period &lt;value 1-255&gt;</i> - Enter a time period between 1-255 to determine the interval the Switch will send out Boot Strap Messages (BSM) to the PIM enabled network. The default setting is 60 seconds. This parameter must be configured separately from the ipif settings of this command. See the examples below for a better understanding.</p>
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To configure the settings for an IP interface to become a CBSR on the multiple access network:

```
DES-3800:admin#config pim cbsr ipif Trinity priority 4
Command: config pim cbsr ipif Trinity priority 4

Success.

DES-3800:admin#
```

Usage example:

To configure the hash mask length for the CBSR:

```
DES-3800:admin#config pim cbsr hash_masklen 30
Command: config pim cbsr hash_masklen 30

Success.

DES-3800:admin#
```

Usage example:

To configure the bootstrap period for the CBSR:

```
DES-3800:admin#config pim cbsr bootstrap_period 60
Command: config pim cbsr bootstrap_period 60

Success.

DES-3800:admin#
```

## show pim cbsr

Purpose	Used to display the Candidate BSR settings of the switch, along with CBSR parameters configured for the Switch.
Syntax	<b>show pim cbsr {ipif &lt;ipif_name12&gt;}</b>
Description	This command will display the settings for Candidate BSRs that are accessible to the switch. This command is for PIM-SM configurations only.
Parameters	<ipif_name 12> - Enter the name of the IP interface for which to display settings. Entering no name will display all CBSRs.
Restrictions	User Account Command Level – All

Usage example:

To view the CBSR settings:

```
DES-3800:admin# show pim cbsr
Command: show pim cbsr

PIM Candidate-BSR Table

C-BSR Hash Mask Len      : 30
C-BSR Bootstrap Period   : 2

Interface      IP Address      Priority
-----
Trinity        11.1.1.1/8        4
System         10.53.13.30/8     -1 (disabled)

DES-3800:admin#
```

**show pim**

Purpose	Used to display the PIM settings, along with PIM parameters configured for the Switch.
Syntax	<b>show pim {ipif &lt;ipif_name12&gt;}</b>
Description	This command will display the settings for the PIM function that are accessible to the switch.
Parameters	<ipif_name 12> - Enter the name of the IP address for which to display settings. Entering no name will display all PIM IP interfaces.
Restrictions	User Account Command Level – All

Usage example:

To view the PIM settings:

```
DES-3800:admin# show pim
Command: show pim

PIM Global State           : Enabled
Last Hop SPT Threshold     : 0  packet per second (switch to SPT tree immediately)
RP SPT threshold           : 0  packet per second (switch to SPT tree immediately)
Register Probe Time        : 5
Register Suppression Time  : 60

PIM Interface Table

Interface      IP Address      Designated  Hello  J/P
-----      -
Trinity        11.1.1.1/8       10.53.13.30 30    60
System         10.53.13.30/8    11.1.1.1    60    60
               Mode      State
               ---      ---
               DM      Disabled
               SM      Enabled

Total Entries: 2

DES-3800:admin#
```

**show pim neighbor**

Purpose	Used to display PIM neighbors of the Switch.
Syntax	<b>show pim neighbor {ipif &lt;ipif_name12&gt;   ipaddress &lt;network_address&gt;}</b>
Description	This command will display the PIM neighbor table for the Switch.
Parameters	<ipif_name 12> - Enter the name of the IP interface for which to display PIM information regarding PIM neighbors.  ipaddress <network_address> - Enter the IP address of a PIM neighbor for which to display information.  Adding no parameters to this command will display all PIM neighbors that probed the Switch.
Restrictions	User Account Command Level – All

Usage example:

To view the PIM neighbors:

```
DES-3800:admin# show pim neighbor
Command: show pim neighbor

PIM Neighbor Address Table
```

Interface Name	Neighbor Address	Expired Time
n10	10.20.6.251	79

```
Total Entries: 1

DES-3800:admin#
```

## show pim ipmroute

Purpose	Used to display the PIM IP Multicast Route Table on the Switch.
Syntax	<b>show pim ipmroute</b>
Description	This command will display the PIM IP Multicast Route Table on the Switch. This command is for PIM-SM configurations only.
Parameters	None.
Restrictions	User Account Command Level – All

Usage example:

To view the PIM routes:

```
DES-3800:admin# show pim ipmroute
Command: show pim ipmroute

PIM IP Multicast Route Table

UA = Upstream AssertTimer
AM = Assert Metric
AMPref = Assert MetricPref
ARB = Assert RPTBit
```

Group Address	Source Address	UA	AM	AMPref	ARB	Flag	Type

```
Total Entries: 12

DES-3800:admin#
```

**create pim register\_checksum\_include\_data**

Purpose	Used to set the RPs that the Switch will send Register packets to and create checksums to be included with the data in Registered packets.
Syntax	<b>create pim register_checksum_include_data rp_address &lt;ipaddr&gt;</b>
Description	This command will set the RPs that the Switch will send Register packets to and create checksums to be included with the data in Registered packets. This command is for PIM-SM configurations only.
Parameters	<i>rp_address &lt;ipaddr&gt;</i> - Enter the IP address of the RP that will verify checksums included with Registered packets.
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To create an RP to which the Switch will send Register packets to and create checksums to be included with the data in Registered packets:

```
DES-3800:admin# create pim register_checksum_include_data rp_address 11.1.1.1
Command: create pim register_checksum_include_data rp_address 11.1.1.1

Success.

DES-3800:admin#
```

**delete pim register\_checksum\_include\_data**

Purpose	Used to disable the RPs that the Switch will send Register packets to and create checksums to be included with the data in Registered packets.
Syntax	<b>delete pim register_checksum_include_data rp_address &lt;ipaddr&gt;</b>
Description	This command will disable the RPs that the Switch will send Register packets to and create checksums to be included with the data in Registered packets. This command is for PIM-SM configurations only.
Parameters	<i>rp_address &lt;ipaddr&gt;</i> - Enter the IP address of the RP that will discontinue sending Register packets to and create checksums to be included with the data in Registered packets.
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To delete RPs that the Switch will send Register packets to and create checksums to be included with the data in Registered packets:

```
DES-3800:admin#delete pim register_checksum_include_data rp_address 11.1.1.1
Command: delete pim register_checksum_include_data rp_address 11.1.1.1

Success.

DES-3800:admin#
```

## show pim register\_checksum\_include\_data\_rp\_list

Purpose	Used to display RPs that the Switch will send Register packets to and create checksums to be included with the data in Registered packets.
Syntax	<b>show pim register_checksum_include_data_rp_list</b>
Description	This command will display RPs that the Switch will send Register packets to and create checksums to be included with the data in Registered packets. This command is for PIM-SM configurations only.
Parameters	None.
Restrictions	User Account Command Level – All

Usage example:

To show the RPs that the Switch will send Register packets to and create checksums to be included with the data in Registered packets:

```
DES-3800:admin# show pim register_checksum_include_data_rp_list
Command: show pim register_checksum_include_data_rp_list

RP Address
-----
11.1.1.1

Total Entries: 1

DES-3800:admin#
```

## show pim active\_rp

Purpose	Used to display currently active RPs that have been chosen from the RP Set table.
Syntax	<b>show pim active_rp {group &lt;multicast_ipaddr&gt;}</b>
Description	This command will display currently active RPs that have been chosen from the RP Set table, which are relaying multicast data.
Parameters	<i>group &lt;multicast_ipaddr&gt;</i> - Enter the multicast group IP address used in identifying the Rendezvous Point (RP). This address must be a class D address.
Restrictions	User Account Command Level – All

Usage example:

To show the currently active RPs that have been chosen from the RP Set table:

```
DES-3800:admin# show pim active_rp
Command: show pim active_rp

Group Address      RP Address
-----
225.1.1.2          172.24.5.6
255.1.2.3          172.24.5.6
235.5.6.7          152.2.3.4

Total Entries: 3

DES-3800:admin#
```

## IP MULTICASTING COMMANDS

The IP multicasting commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
show ipmc cache	{group <group>} {ipaddress <network_address>}
show ipmc	{ipif <ipif_name 12>   protocol [dvmrp   pim]}

Each command is listed, in detail, in the following sections.

### show ipmc cache

Purpose	Used to display the current IP multicast forwarding cache.
Syntax	<b>show ipmc cache {group &lt;group&gt;} {ipaddress &lt;network_address&gt;}</b>
Description	This command will display the current IP multicast forwarding cache.
Parameters	<i>group &lt;group&gt;</i> – The multicast group IP address. <i>ipaddress &lt;network_address&gt;</i> – The IP address and netmask of the source. The address and mask information can be specified using the traditional format (for example, 10.1.2.3/255.0.0.0 or in CIDR format, 10.1.2.3/8).
Restrictions	User Account Command Level – All

Usage example:

To display the current IP multicast forwarding cache:

```
DES-3800:admin#show ipmc cache
Command: show ipmc cache
```

Multicast Group	Source Address/Netmask	Upstream Neighbor	Expire Time	Routing Protocol
224.1.1.1	10.48.74.121/32	10.48.75.63	30	dvmrp
224.1.1.1	20.48.74.25 /32	20.48.75.25	20	dvmrp
224.1.2.3	10.48.75.3 /3	10.48.76.6	30	dvmrp

```
Total Entries: 3

DES-3800:admin#
```

### show ipmc

Purpose	Used to display the IP multicast interface table.
Syntax	<b>show ipmc {ipif &lt;ipif_name 12&gt;   protocol [dvmrp   pim]}</b>
Description	This command will display the current IP multicast interface table.
Parameters	<i>&lt;ipif_name 12&gt;</i> – The name of the IP interface for which to display the IP multicast interface table for. <i>protocol</i> – Allows the user to specify whether or not to use one of the available protocols to display the IP multicast interface table. For example, if DVMRP is specified, the table will display only those entries

**show ipmc**

that are related to the DVMRP protocol.

- *dvmrp* – Specifying this parameter will display only those entries that are related to the DVMRP protocol.
- *pim* - Specifying this parameter will display only those entries that are related to the PIM protocol.

Restrictions

User Account Command Level – All

## Usage example

To display the current IP multicast interface table by DVMRP entry:

```
DES-3800:admin#show ipmc protocol dvmrp
Command: show ipmc protocol dvmrp

Interface Name  IP Address  Multicast Routing
-----
System         10.90.90.90  DVMRP

Total Entries: 1

DES-3800:admin#
```

**MD5 COMMANDS**

The MD5 configuration commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
create md5 key	<key_id 1-255> <password 16>
config md5 key	<key_id 1-255> <password 16>
delete md5 key	<key_id 1-255>
show md5	{key <key_id 1-255>}

Each command is listed, in detail, in the following sections.

**create md5 key**

Purpose	Used to create a new entry in the MD5 key table.
Syntax	<b>create md5 key &lt;key_id 1-255&gt; &lt;password 16&gt;</b>
Description	This command is used to create an entry for the MD5 key table.
Parameters	<p>&lt;key_id 1-255&gt; – The MD5 key ID. The user may enter a key ranging from 1 to 255.</p> <p>&lt;password&gt; – An MD5 password of up to 16 bytes.</p>
Restrictions	User Account Command Level – Administrator and Operator

## Usage example

To create an entry in the MD5 key table:

```
DES-3800:admin# create md5 key 1 dlink
Command: create md5 key 1 dlink

Success.

DES-3800:admin#
```

**config md5 key**

Purpose	Used to enter configure the password for an MD5 key.
Syntax	<b>config md5 key &lt;key_id 1-255&gt; &lt;password 16&gt;</b>
Description	This command is used to configure an MD5 key and password.
Parameters	<p>&lt;key_id 1-255&gt; – The previously defined MD5 key ID.</p> <p>&lt;password 16&gt; – The user may change the MD5 password for the md5 key. A new password of up to 16 characters can be created.</p>
Restrictions	User Account Command Level – Administrator and Operator

## Usage example

To configure an MD5 Key password:

```
DES-3800:admin#config md5 key 1 taboo
Command: config md5 key 1 taboo

Success.

DES-3800:admin#
```

## delete md5 key

Purpose	Used to delete an entry in the MD5 key table.
Syntax	<b>delete md5 key &lt;key_id 1-255&gt;</b>
Description	This command is used to delete a specific entry in the MD5 key table.
Parameters	<key_id 1-255> – The MD5 key ID to delete.
Restrictions	User Account Command Level – Administrator and Operator

Usage example

The delete an entry in the MD5 key table:

```
DES-3800:admin# delete md5 key 1
Command: delete md5 key 1

Success.

DES-3800:admin#
```

## show md5

Purpose	Used to display an MD5 key table.
Syntax	<b>show md5 {key &lt;key_id 1-255&gt;}</b>
Description	This command will display the current MD5 key table.
Parameters	<key_id 1-255> – The MD5 key ID to be displayed.
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To display the current MD5 key:

```
DES-3800:admin#show md5
Command: show md5

MD5 Key Table Configurations

Key-ID   Key
-----
1        dlink
2        develop
3        fireball
4        intelligent

Total Entries: 4

DES-3800:admin#
```

## OSPF CONFIGURATION COMMANDS

The OSPF configuration commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config ospf router_id	<ipaddr>
enable ospf	
disable ospf	
show ospf	
create ospf area	<area_id> type [normal   stub {stub_summary [enable   disable]   metric <value 0-65535>}]
delete ospf area	<area_id>
config ospf area	<area_id> type [normal   stub {stub_summary [enable   disable]   metric <value 0-65535>}]
show ospf area	{<area_id>}
create ospf host_route	<ipaddr> {area <area_id>   metric <value 1-65535>}
delete ospf host_route	<ipaddr>
config ospf host_route	<ipaddr> {area <area_id>   metric <value 1-65535>}
show ospf host_route	<ipaddr>
create ospf aggregation	<area_id> <network_address> lsdb_type summary {advertise [enable   disable]}
delete ospf aggregation	<area_id> <network_address> lsdb_type summary
config ospf aggregation	<area_id> <network_address> lsdb_type summary {advertise [enable   disable]}
show ospf aggregation	<area_id>
show ospf lsdb	{area <area_id>   advertise_router <ipaddr>   type [rtrlink   netlink   summary   assummary   asextlink]}
show ospf neighbor	<ipaddr>
show ospf virtual_neighbor	{<area_id> <neighbor_id>}
config ospf ipif	[ipif <ipif_name 12>   all] {area <area_id>   priority <value>   hello_interval <sec 1-65535>   dead_interval <sec 1-65535>   authentication [none   simple <password 8>   md5 <key_id 1-255>]   metric <value 1-65535>   state [enable   disable]   active   passive}
show ospf	{[ipif <ipif_name 12>   all]}
create ospf virtual_link	<area_id> <neighbor_id> {hello_interval <sec 1-65535>   dead_interval <sec 1-65535>   authentication [none   simple <password 8>   md5 <key_id 1-255>]}
config ospf virtual_link	<area_id> <neighbor_id> {hello_interval <sec 1-65535>   dead_interval <sec 1-65535>   authentication [none   simple <password 8>   md5 <key_id 1-255>]}
delete ospf virtual_link	<area_id> <neighbor_id>
show ospf virtual_link	<area_id> <neighbor_id>

Each command is listed, in detail, in the following sections.

## config ospf router\_id

Purpose	Used to configure the OSPF router ID.
Syntax	<b>config ospf router_id &lt;ipaddr&gt;</b>
Description	This command is used to configure the OSPF router ID.
Parameters	<ipaddr> – The IP address of the OSPF router.
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To configure the OSPF router ID:

```
DES-3800:admin#config ospf router_id 10.48.74.122
Command: config ospf router_id 10.48.74.122

Success.

DES-3800:admin#
```

## enable ospf

Purpose	Used to enable OSPF on the Switch.
Syntax	<b>enable ospf</b>
Description	This command, in combination with the <b>disable ospf</b> command below, is used to enable and disable OSPF on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To enable OSPF on the Switch:

```
DES-3800:admin#enable ospf
Command: enable ospf

Success.

DES-3800:admin#
```

## disable ospf

Purpose	Used to disable OSPF on the Switch.
Syntax	<b>disable ospf</b>
Description	This command, in combination with the <b>enable ospf</b> command above, is used to enable and disable OSPF on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To disable OSPF on the Switch:

```
DES-3800:admin#disable ospf
```

```
Command: disable ospf
```

```
Success.
```

```
DES-3800:admin#
```

## show ospf

Purpose	Used to display the current OSPF state on the Switch.
Syntax	<b>show ospf</b>
Description	This command will display the current state of OSPF on the Switch, divided into the following categories: General OSPF settings OSPF Interface settings OSPF Area settings OSPF Virtual Interface settings OSPF Area Aggregation settings OSPF Host Route settings
Parameters	None.
Restrictions	User Account Command Level – All

Usage example:

To show OSPF state:

```
DES-3800:admin#show ospf
```

```
Command: show ospf
```

```
OSPF Router ID   : 10.1.1.2
State            : Enabled
```

### OSPF Interface Settings

Interface	IP Address	Area ID	State	Link Status	Metric
-----	-----	-----	-----	-----	-----
System	10.90.90.90/8	0.0.0.0	Disabled	Link DOWN	1
ip2	20.1.1.1/8	0.0.0.0	Disabled	Link DOWN	1
ip3	30.1.1.1/8	0.0.0.0	Disabled	Link DOWN	1

```
Total Entries : 3
```

### OSPF Area Settings

Area ID	Type	Stub Import Summary LSA	Stub Default Cost
-----	-----	-----	-----
0.0.0.0	Normal	None	None
10.0.0.0	Normal	None	None
10.1.1.1	Normal	None	None
20.1.1.1	Stub	Enabled	1

```
Total Entries : 4
```

### Virtual Interface Configuration

Transit	Virtual	Hello	Dead	Authentication	Link
---------	---------	-------	------	----------------	------

Area ID	Neighbor Router	Interval	Interval		Status
10.0.0.0	20.0.0.0	10	60	None	DOWN
10.1.1.1	20.1.1.1	10	60	None	DOWN

Total Entries : 2

**OSPF Area Aggregation Settings**

Area ID	Aggregated Network Address	LSDB Type	Advertise
-----	-----	-----	-----

Total Entries : 0

**OSPF Host Route Settings**

Host Address	Metric	Area ID
-----	-----	-----
10.3.3.3	1	10.1.1.1

Total Entries : 1

DES-3800:admin#

## create ospf area

Purpose	Used to configure OSPF area settings.
Syntax	<b>create ospf area &lt;area_id&gt; type [normal   stub {stub_summary [enable   disable]   metric &lt;value 0-65535&gt;}]</b>
Description	This command is used to create an OSPF area and configure its settings.
Parameters	<p><b>&lt;area_id&gt;</b> – The OSPF area ID. The user may enter a 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.</p> <p><b>type [normal   stub]</b> – The OSPF area mode of operation – stub or normal.</p> <p><b>stub_summary [enable   disable]</b> – Enables or disables the OSPF area to import summary LSA advertisements.</p> <p><b>metric &lt;value 0-65535&gt;</b> – The OSPF area cost between 0 and 65535. 0 denotes that the value will be automatically assigned. The default setting is 0.</p>
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To create an OSPF area:

```
DES-3800:admin#create ospf area 10.48.74.122 type normal
Command: create ospf area 10.48.74.122 type normal

Success.

DES-3800:admin#
```

**delete ospf area**

Purpose	Used to delete an OSPF area.
Syntax	<b>delete ospf area &lt;area_id&gt;</b>
Description	This command is used to delete an OSPF area.
Parameters	<b>&lt;area_id&gt;</b> – A 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.
Restrictions	Only administrator-level users can issue this command.

Usage example:

To delete an OSPF area:

```
DES-3800:admin#delete ospf area 10.48.74.122
Command: delete ospf area 10.48.74.122

Success.

DES-3800:admin#
```

**config ospf area**

Purpose	Used to configure an OSPF area's settings.
Syntax	<b>config ospf area &lt;area_id&gt; type [normal   stub {stub_summary [enable   disable]   metric &lt;value 0-65535&gt;}]</b>
Description	This command is used to configure an OSPF area's settings.
Parameters	<p><b>&lt;area_id&gt;</b> – The OSPF area ID. The user may enter a 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.</p> <p><b>type [normal   stub]</b> – Allows the specification of the OSPF mode of operation – stub or normal.</p> <p><b>stub_summary [enable   disable]</b> – Allows the OSPF area import of LSA advertisements to be enabled or disabled.</p> <p><b>metric &lt;value 0-65535&gt;</b> – The OSPF area stub default cost.</p>
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To configure an OSPF area's settings:

```
DES-3800:admin#config ospf area 10.48.74.122 type stub stub_summary enable metric 1
Command: config ospf area 10.48.74.122 type stub stub_summary enable metric 1

Success.

DES-3800:admin#
```

**show ospf area**

Purpose	Used to display an OSPF area's configuration.
Syntax	<b>show ospf area {&lt;area_id&gt;}</b>
Description	This command will display the current OSPF area configuration.
Parameters	<b>&lt;area_id&gt;</b> – A 32-bit number in the form of an IP address

**show ospf area**

(xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.

Restrictions User Account Command Level – All

Usage example:

To display an OSPF area's settings:

```
DES-3800:admin#show ospf area
Command: show ospf area
```

Area ID	Type	Stub Import Summary LSA	Stub Default Cost
0.0.0.0	Normal	None	None
10.48.74.122	Stub	Enabled	Enabled

```
Total Entries: 2
DES-3800:admin#
```

**create ospf host\_route**

Purpose	Used to configure OSPF host route settings.
Syntax	<b>create ospf host_route &lt;ipaddr&gt; {area &lt;area_id&gt;   metric &lt;value 1-65535&gt;}</b>
Description	This command is used to configure the OSPF host route settings.
Parameters	<p>&lt;ipaddr&gt; – The host's IP address.</p> <p>&lt;area_id&gt; – A 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.</p> <p>metric &lt;value 1-65535&gt; – A metric between 1 and 65535, which will be advertised.</p>
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To configure the OSPF host route settings:

```
DES-3800:admin#create ospf host_route 10.48.74.122 area 10.1.1.1 metric 2
Command: create ospf host_route 10.48.74.122 area 10.1.1.1 metric 2

Success.

DES-3800:admin#
```

**delete ospf host\_route**

Purpose	Used to delete an OSPF host route.
Syntax	<b>delete ospf host_route &lt;ipaddr&gt;</b>
Description	This command is used to delete an OSPF host route.
Parameters	<ipaddr> – The IP address of the OSPF host.
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To delete an OSPF host route:

```
DES-3800:admin#delete ospf host_route 10.48.74.122
Command: delete ospf host_route 10.48.74.122

Success.

DES-3800:admin#
```

## config ospf host\_route

Purpose	Used to configure OSPF host route settings.
Syntax	<b>config ospf host_route &lt;ipaddr&gt; {area &lt;area_id&gt;   metric &lt;value&gt;}</b>
Description	This command is used to configure an OSPF host route settings.
Parameters	<p>&lt;ipaddr&gt; – The IP address of the host.</p> <p>&lt;area_id&gt; – A 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.</p> <p>&lt;value&gt; – A metric between 1 and 65535 that will be advertised for the route.</p>
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To configure an OSPF host route:

```
DES-3800:admin#config ospf host_route 10.48.74.122 area 10.1.1.1 metric 2
Command: config ospf host_route 10.48.74.122 area 10.1.1.1 metric 2

Success.

DES-3800:admin#
```

## show ospf host\_route

Purpose	Used to display the current OSPF host route table.
Syntax	<b>show ospf host_route {&lt;ipaddr&gt;}</b>
Description	This command will display the current OSPF host route table.
Parameters	<ipaddr> – The IP address of the host.
Restrictions	User Account Command Level – All

Usage example:

To display the current OSPF host route table:

```
DES-3800:admin#show ospf host_route
Command: show ospf host_route

Host Address  Metric  Area_ID
-----
10.48.73.21   2       10.1.1.1
10.48.74.122  1       10.1.1.1

Total Entries: 2

DES-3800:admin#
```

**create ospf aggregation**

Purpose	Used to configure OSPF area aggregation settings.
Syntax	<b>create ospf aggregation &lt;area_id&gt; &lt;network_address&gt; lsdb_type summary {advertise [enable   disable]}</b>
Description	This command is used to create an OSPF area aggregation.
Parameters	<p><b>&lt;area_id&gt;</b> – A 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.</p> <p><b>&lt;network_address&gt;</b> – The 32-bit number in the form of an IP address that uniquely identifies the network that corresponds to the OSPF Area.</p> <p><b>lsdb_type summary</b> – The type of address aggregation.</p> <p><b>advertise [enable   disable]</b> – Allows for the advertisement trigger to be enabled or disabled.</p>
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To create an OSPF area aggregation:

```
DES-3800:admin#create ospf aggregation 10.1.1.1 10.48.76.122/16
lsdb_type summary advertise enable
Command: create ospf aggregation 10.1.1.1 10.48.76.122/16
lsdb_type summary advertise enable

Success.

DES-3800:admin#
```

**delete ospf aggregation**

Purpose	Used to delete an OSPF area aggregation configuration.
Syntax	<b>delete ospf aggregation &lt;area_id&gt; &lt;network_address&gt; lsdb_type summary</b>
Description	This command is used to delete an OSPF area aggregation configuration.
Parameters	<p><b>&lt;area_id&gt;</b> – A 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.</p> <p><b>&lt;network_address&gt;</b> – The 32-bit number in the form of an IP address that uniquely identifies the network that corresponds to the OSPF Area.</p> <p><b>lsdb_type summary</b> – Specifies the type of address aggregation.</p>
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To configure the OSPF area aggregation settings:

```
DES-3800:admin#delete ospf aggregation 10.1.1.1 10.48.76.122/16 lsdb_type summary
Command: delete ospf aggregation 10.1.1.1 10.48.76..122/16 lsdb_type summary

Success.

DES-3800:admin#
```

**config ospf aggregation**

Purpose	Used to configure the OSPF area aggregation settings.
Syntax	<b>config ospf aggregation &lt;area_id&gt; &lt;network_address&gt; lsdb_type summary {advertise [enable   disable]}</b>
Description	This command is used to configure the OSPF area aggregation settings.
Parameters	<p><b>&lt;area_id&gt;</b> – A 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.</p> <p><b>&lt;network_address&gt;</b> – The 32-bit number in the form of an IP address that uniquely identifies the network that corresponds to the OSPF Area.</p> <p><b>lsdb_type summary</b> – Specifies the type of address aggregation.</p> <p><b>advertise [enable   disable]</b> – Allows for the advertisement trigger to be enabled or disabled.</p>
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To configure the OSPF area aggregation settings:

```
DES-3800:admin#config ospf aggregation 10.1.1.1 10.48.76.122/16 lsdb_type
summary advertise enable
Command: config ospf aggregation 10.1.1.1 10.48.76.122/16 lsdb_type
summary advertise enable

Success.

DES-3800:admin#
```

**show ospf aggregation**

Purpose	Used to display the current OSPF area aggregation settings.
Syntax	<b>show ospf aggregation {&lt;area_id&gt;}</b>
Description	This command will display the current OSPF area aggregation settings.
Parameters	<b>&lt;area_id&gt;</b> – Enter this parameter to view this table by a specific OSPF area ID.
Restrictions	User Account Command Level – All

Usage example:

To display OSPF area aggregation settings:

```
DES-3800:admin#show ospf aggregation
Command: show ospf aggregation

OSPF Area Aggregation Settings

Area ID    Aggregated      LSDB           Advertise
-----    -
10.1.1.1   10.0.0.0/8      Summary        Enabled
10.1.1.1   20.2.0.0/16     Summary        Enabled

Total Entries: 2

DES-3800:admin#
```

**show ospf lsdb**

Purpose	Used to display the OSPF Link State Database (LSDB).
Syntax	<b>show ospf lsdb {area_id &lt;area_id&gt;   advertise_router &lt;ipaddr&gt;   type [rtrlink   netlink   summary   assummary   asextlink]}</b>
Description	This command will display the current OSPF Link State Database (LSDB).
Parameters	<p><i>area_id &lt;area_id&gt;</i> – A 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.</p> <p><i>advertise_router &lt;ipaddr&gt;</i> – The router ID of the advertising router.</p> <p><i>type [rtrlink   netlink   summary   assummary   asextlink]</i> – The type of link.</p>
Restrictions	User Account Command Level – All

**NOTE:** When this command displays a “\*” (a star symbol) in the OSPF LSDB table for the *area\_id* or the *Cost*, this is interpreted as “no area ID” for external LSAs, and as “no cost given” for the advertised link.

Usage example:

To display the link state database of OSPF:

<b>DES-3800:admin#show ospf lsdb</b>					
<b>Command: show ospf lsdb</b>					
Area ID	LSDB Type	Advertising Router ID	Link State ID	Cost	Sequence Number
0.0.0.0	RTRLINK	50.48.75.73	50.48.75.73	*	0x80000002
0.0.0.0	Summary	50.48.75.73	10.0.0.0/8	1	0x80000001
1.0.0.0	RTRLINK	50.48.75.73	50.48.75.73	*	0x80000001
1.0.0.0	Summary	50.48.75.73	40.0.0.0/8	1	0x80000001
1.0.0.0	Summary	50.48.75.73	50.0.0.0/8	1	0x80000001
*	ASExtLink	50.48.75.73	1.2.0.0/16	20	0x80000001
<b>Total Entries: 5</b>					
<b>DES-3800:admin#</b>					

**show ospf neighbor**

Purpose	Used to display the current OSPF neighbor router table.
Syntax	<b>show ospf neighbor {&lt;ipaddr&gt;}</b>
Description	This command will display the current OSPF neighbor router table.
Parameters	<i>&lt;ipaddr&gt;</i> – The IP address of the neighbor router.
Restrictions	User Account Command Level – All

Usage example:

To display the current OSPF neighbor router table:

```
DES-3800:admin#show ospf neighbor
Command: show ospf neighbor
```

IP Address of Neighbor	Router ID of Neighbor	Neighbor Priority	Neighbor State
10.48.74.122	10.2.2.2	1	Initial

```
Total Entries: 1

DES-3800:admin#
```

## show ospf virtual\_neighbor

Purpose	Used to display the current OSPF virtual neighbor router table.
Syntax	<b>show ospf virtual_neighbor {&lt;area_id&gt; &lt;neighbor id&gt;}</b>
Description	This command will display the current OSPF virtual neighbor router table.
Parameters	<p><b>&lt;area_id&gt;</b> – A 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.</p> <p><b>&lt;neighbor_id&gt;</b> – The OSPF router ID for the neighbor. This is a 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the remote area's Area Border Router.</p>
Restrictions	User Account Command Level – All

Usage example:

To display the current OSPF virtual neighbor table:

```
DES-3800:admin#show ospf virtual_neighbor
Command: show ospf virtual_neighbor
```

Transit Area ID	Router ID of Virtual Neighbor	IP Address of Virtual Neighbor	Virtual Neighbor State
10.1.1.1	10.2.3.4	10.48.74.111	Exchange

```
Total Entries : 1

DES-3800:admin#
```

## config ospf ipif

Purpose	Used to configure the OSPF interface settings.
Syntax	<b>config ospf [ipif &lt;ipif_name 12&gt;   all] {area &lt;area_id&gt;   priority &lt;value&gt;   hello_interval &lt;sec 1-65535&gt;   dead_interval &lt;sec 1-65535&gt;   authentication [none   simple &lt;password 8&gt;   md5 &lt;key_id 1-255&gt;]   metric &lt;value 1-65535&gt;   state [enable   disable]   active   passive}</b>
Description	This command is used to configure the OSPF interface settings.
Parameters	<p><b>&lt;ipif_name 12&gt;</b> – The name of the IP interface.</p> <p><b>all</b> - All IP interfaces.</p> <p><b>area &lt;area_id&gt;</b> - A 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.</p>

## config ospf ipif

*priority <value>* – The priority used in the election of the Designated Router (DR). A number between 0 and 255.

*hello\_interval <sec 1-65535>* – Allows the specification of the interval between the transmission of OSPF Hello packets, in seconds. Between 1 and 65535 seconds can be specified. The Hello Interval, Dead Interval, Authorization Type, and Authorization Key should be the same for all routers on the same network.

*dead\_interval <sec 1-65535>* – Allows the specification of the length of time between the receipt of Hello packets from a neighbor router before the selected area declares that router down. An interval between 1 and 65535 seconds can be specified. The Dead Interval must be evenly divisible by the Hello Interval.

*metric <value 1-65535>* – The interface metric (1 to 65535). Entering a 0 will allow automatic calculation of the metric.

*authentication* – Enter the type of authentication preferred. The user may choose between:

- *none* – Choosing this parameter will require no authentication.
- *simple <password 8>* – Choosing this parameter will set a simple authentication which includes a case-sensitive password of no more than 8 characters.
- *md5 <key\_id 1-255>* – Choosing this parameter will set authentication based on md5 encryption. A previously configured MD5 key ID (1 to 255) is required.

*metric <value 1-65535>* – This field allows the entry of a number between 1 and 65,535 that is representative of the OSPF cost of reaching the selected OSPF interface. The default metric is 1.

*state [enable | disable]* – Used to enable or disable this function.

*active | passive* – This parameter is used to assign the designated entry to be an active or passive interface. The default is *active*.

Restrictions

User Account Command Level – Administrator and Operator

Usage example:

To configure OSPF interface settings:

```
DES-3800:admin#config ospf ipif System priority 2 hello_interval
15 metric 2 state enable
```

```
Command: config ospf ipif System priority 2 hello_interval 15
metric 2 state enable
```

```
Success.
```

```
DES-3800:admin#
```

## show ospf ipif

**Purpose** Used to display the current OSPF interface settings for the specified interface name.

**Syntax** **show ospf ipif {<ipif\_name 12>}**

**Description** This command will display the current OSPF interface settings for the specified interface name.

**Parameters** *<ipif\_name 12>* – The IP interface name for which to display the current OSPF interface settings.

**Restrictions** User Account Command Level – All

Usage Example:

To display the current OSPF interface settings, for a specific OSPF interface:

```
DES-3800:admin#show ospf ipif ipif2
Command: show ospf ipif ipif2

Interface Name: ipif2          IP Address: 123.234.12.34/24 ((Link Up))
Network Medium Type: BROADCAST Metric: 1
Area ID: 1.0.0.0             Administrative State: Enabled
Priority: 1                   DR State: DR
DR Address: 123.234.12.34     Backup DR Address: None
Hello Interval: 10           Dead Interval: 40
Transmit Delay: 1            Retransmit Time: 5
Authentication: None

Total Entries: 1

DES-3800:admin#
```

## show ospf all

Purpose	Used to display the current OSPF settings of all the OSPF interfaces on the Switch.
Syntax	<b>show ospf all</b>
Description	This command will display the current OSPF settings for all OSPF interfaces on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To display the current OSPF interface settings, for all OSPF interfaces on the Switch:

```
DES-3800:admin#show ospf all
Command: show ospf all

Interface Name: System          IP Address: 10.42.73.10/8 (Link Up)
Network Medium Type: BROADCAST Metric: 1
Area ID: 0.0.0.0             Administrative State: Enabled
Priority: 1                   DR State: DR
DR Address: 10.42.73.10     Backup DR Address: None
Hello Interval: 10           Dead Interval: 40
Transmit Delay: 1            Retransmit Time: 5
Authentication: None

Interface Name: ipif2          IP Address: 123.234.12.34/24 ((Link Up))
Network Medium Type: BROADCAST Metric: 1
Area ID: 1.0.0.0             Administrative State: Enabled
Priority: 1                   DR State: DR
DR Address: 123.234.12.34     Backup DR Address: None
Hello Interval: 10           Dead Interval: 40
Transmit Delay: 1            Retransmit Time: 5
Authentication: None

Total Entries: 2

DES-3800:admin#
```

**create ospf virtual\_link**

Purpose	Used to create an OSPF virtual interface.
Syntax	<b>create ospf virtual_link &lt;area_id&gt; &lt;neighbor_id&gt; {hello_interval &lt;sec 1-65535&gt;   dead_interval &lt;sec 1-65535&gt;   authentication [none   simple &lt;password 8&gt;   md5 &lt;key_id 1-255&gt;]}</b>
Description	This command is used to create an OSPF virtual interface.
Parameters	<p><b>&lt;area_id&gt;</b> – A 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.</p> <p><b>&lt;neighbor_id&gt;</b> – The OSPF router ID for the remote area. This is a 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the remote area's Area Border Router. The router ID of the neighbor router.</p> <p><b>hello_interval &lt;sec 1-65535&gt;</b> – Allows the specification of the interval between the transmission of OSPF Hello packets, in seconds. Between 1 and 65535 seconds can be specified. The Hello Interval, Dead Interval, Authorization Type, and Authorization Key should be the same for all routers on the same network.</p> <p><b>dead_interval &lt;sec 1-65535&gt;</b> – Allows the specification of the length of time between the receipt of Hello packets from a neighbor router before the selected area declares that router down. An interval between 1 and 65535 seconds can be specified. The Dead Interval must be evenly divisible by the Hello Interval.</p> <p><b>authentication</b> – Enter the type of authentication preferred. The user may choose between:</p> <ul style="list-style-type: none"> <li><i>none</i> – Choosing this parameter will require no authentication.</li> <li><i>simple &lt;password 8&gt;</i> – Choosing this parameter will set a simple authentication which includes a case-sensitive password of no more than 8 characters.</li> <li><i>md5 &lt;key_id 1-255&gt;</i> – Choosing this parameter will set authentication based on md5 encryption. A previously configured MD5 key ID (1 to 255) is required.</li> </ul>
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To create an OSPF virtual interface:

```
DES-3800:admin#create ospf virtual_link 10.1.12 20.1.1.1 hello_interval 10
Command: create ospf virtual_link 10.1.12 20.1.1.1 hello_interval 10

Success.

DES-3800:admin#
```

**config ospf virtual\_link**

Purpose	Used to configure the OSPF virtual interface settings.
Syntax	<b>config ospf virtual_link &lt;area_id&gt; &lt;neighbor_id&gt; {hello_interval &lt;sec 1-65535&gt;   dead_interval &lt;sec 1-65535&gt;   authentication [none   simple &lt;password 8&gt;   md5 &lt;key_id 1-255&gt;]}</b>
Description	This command is used to configure the OSPF virtual interface settings.
Parameters	<b>&lt;area_id&gt;</b> – A 32-bit number in the form of an IP address

**config ospf virtual\_link**

(xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.

**<neighbor\_id>** – The OSPF router ID for the remote area. This is a 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the remote area's Area Border Router.

**hello\_interval <sec 1-65535>** – Allows the specification of the interval between the transmission of OSPF Hello packets, in seconds. Between 1 and 65535 seconds can be specified. The Hello Interval, Dead Interval, Authorization Type, and Authorization Key should be the same for all routers on the same network.

**dead\_interval <sec 1-65535>** – Allows the specification of the length of time between the receipt of Hello packets from a neighbor router before the selected area declares that router down. An interval between 1 and 65535 seconds can be specified. The Dead Interval must be evenly divisible by the Hello Interval.

**authentication** – Enter the type of authentication preferred. The user may choose between:

- **none** – Choosing this parameter will require no authentication.
- **simple <password 8>** – Choosing this parameter will set a simple authentication which includes a case-sensitive password of no more than 8 characters.
- **md5 <key\_id 1-255>** – Choosing this parameter will set authentication based on md5 encryption. A previously configured MD5 key ID (1 to 255) is required.

**Restrictions**

Only administrator-level users can issue this command.

Usage example:

To configure the OSPF virtual interface settings:

```
DES-3800:admin#config ospf virtual_link 10.1.1.2 20.1.1.1 hello_interval 10
Command: config ospf virtual_link 10.1.1.2 20.1.1.1 hello_interval 10

Success.

DES-3800:admin#
```

**delete ospf virtual\_link**

**Purpose** Used to delete an OSPF virtual interface.

**Syntax** **delete ospf virtual\_link <area\_id> <neighbor\_id>**

**Description** This command will delete an OSPF virtual interface from the Switch.

**Parameters**

**<area\_id>** – A 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.

**<neighbor\_id>** – The OSPF router ID for the remote area. This is a 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the remote area's Area Border Router. The router ID of the neighbor router.

**Restrictions**

Only administrator-level users can issue this command.

Usage example:

To delete an OSPF virtual interface from the Switch:

```
DES-3800:admin#delete ospf virtual_link 10.1.12 20.1.1.1
```

```
Command: delete ospf virtual_link 10.1.12 20.1.1.1
```

```
Success.
```

```
DES-3800:admin#
```

## show ospf virtual\_link

Purpose	Used to display the current OSPF virtual interface configuration.
Syntax	<b>show ospf virtual_link {&lt;area_id&gt; &lt;neighbor_id&gt;}</b>
Description	This command will display the current OSPF virtual interface configuration.
Parameters	<p><b>&lt;area_id&gt;</b> – A 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the OSPF area in the OSPF domain.</p> <p><b>&lt;neighbor_id&gt;</b> – The OSPF router ID for the remote area. This is a 32-bit number in the form of an IP address (xxx.xxx.xxx.xxx) that uniquely identifies the remote area's Area Border Router. This is the router ID of the neighbor router.</p>
Restrictions	User Account Command Level – All

Usage example:

To display the current OSPF virtual interface configuration:

```
DES-3800:admin#show ospf virtual_link
```

```
Command: show ospf virtual_link
```

### Virtual Interface Configuration

Transit Area ID	Virtual Neighbor Router	Hello Interval	Dead Interval	Authentication	Link Status
10.0.0.0	20.0.0.0	10	60	None	DOWN

```
Total Entries: 1
```

```
DES-3800:admin#
```

## ROUTE PREFERENCE COMMANDS

Route Preference is a way for routers to select the best path when there are two or more different routes to the same destination from two different routing protocols. The majority of routing protocols are not compatible when used in conjunction with each other. This Switch supports and may be configured for many routing protocols, as a stand alone switch or more importantly, in utilizing the stacking function and Single IP Management of the Switch. Therefore the ability to exchange route information and select the best path is essential to optimal use of the Switch and its capabilities.

The first decision the Switch will make in selecting the best path is to consult the Route Preference Settings table of the Switch. This table can be viewed using the **show route preference** command, and it holds the list of possible routing protocols currently implemented in the Switch, along with a reliability value which determines which routing protocol will be the most dependable to route packets. Below is a list of the default route preferences set on the Switch.

Route Type	Validity Range	Default Value
Local	0 – Permanently set on the Switch and unconfigurable.	0
Static	1 – 999	60
OSPF Intra	1 – 999	80
OSPF Inter	1 – 999	90
RIP	1 – 999	100
OSPF ExtT1	1 – 999	110
OSPF ExtT2	1 – 999	115

As shown above, *Local* will always be the first choice for routing purposes and the next most reliable path is *Static* due to the fact that its has the next lowest value. To set a higher reliability for a route, change its value to a number less than the value of a route preference that has a greater reliability value using the **config route preference** command. For example, if the user wishes to make RIP the most reliable route, the user can change its value to one that is less than the lowest value (Static - 60) or the user could change the other route values to more than 100.

The user should be aware of three points before configuring the route preference.

1. No two route preference values can be the same. Entering the same route preference may cause the Switch to crash due to indecision by the Switch.
2. If the user is not fully aware of all the features and functions of the routing protocols on the Switch, a change in the default route preference value may cause routing loops or black holes.
3. After changing the route preference value for a specific routing protocol, that protocol needs to be restarted because the previously learned routes have been dropped from the Switch. The Switch must learn the routes again before the new settings can take affect.

The Route Preference commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config route preference	[static   rip   ospfIntra   ospfInter   ospfExt1   ospfExt2] <value 1-999>
show route preference	{[local   static   rip   ospfIntra   ospfInter   ospfExt1   ospfExt2]}

Each command is listed, in detail, in the following sections.

**config route preference**

Purpose	Used to configure the route preference of each route type.
Syntax	<b>config route preference [static   rip   ospfIntra   ospfInter   ospfExt1   ospfExt2] &lt;value 1-999&gt;</b>
Description	This command is used to set the route preference value for each routing protocol listed. A lower value will denote a better chance that the specified protocol is the best path for routing packets.
Parameters	<p>The user may set a preference value for a specific route by first choosing one of the following and then adding an alternate preference value:</p> <ul style="list-style-type: none"> <li>• <i>static</i> – Choose this parameter to configure the preference value for the <i>static</i> route.</li> <li>• <i>rip</i> - Choose this parameter to configure the preference value for the <i>RIP</i> route.</li> <li>• <i>ospfIntra</i> - Choose this parameter to configure the preference value for the <i>OSPF Intra-area</i> route.</li> <li>• <i>ospfInter</i> - Choose this parameter to configure the preference value for the <i>OSPF Inter-area</i> route.</li> <li>• <i>ospfExtT1</i> - Choose this parameter to configure the preference value for the <i>OSPF AS External route type-1</i> route.</li> <li>• <i>ospfExtT2</i> - Choose this parameter to configure the preference value for the <i>AS External route type-2</i> route.</li> </ul> <p>&lt;value 1-999&gt; - Enter a value between 1 and 999 to set the route preference for a particular route. The lower the value, the higher the chance the specified protocol will be chosen as the best path for routing packets.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure the route preference value for RIP as 50:

```
DES-3800:admin#config route preference rip 50
Command: config route preference rip 50

Success.

DES-3800:admin#
```

**show route preference**

Purpose	Used to display the route preference of each route type.
Syntax	<b>show route preference {[local   static   rip   ospfIntra   ospfInter   ospfExt1   ospfExt2]}</b>
Description	This command will display the Route Preference Settings table. The user may view all route preference settings by entering the command without any parameters or choose a specific type by adding the route parameter to the command.
Parameters	<p><i>local</i> – Enter this parameter to view the route preference settings for the <i>local</i> route.</p> <p><i>static</i> - Enter this parameter to view the route preference settings for the <i>static</i> route.</p> <p><i>rip</i> - Enter this parameter to view the route preference settings for</p>

**show route preference**

the *RIP* route.

*ospfIntra* - Enter this parameter to view the route preference settings for the *Ospf Intra-area* route.

*ospfInter* - Enter this parameter to view the route preference settings for the *OSPF Inter-area* route.

*ospfExtT1* - Enter this parameter to view the route preference settings for the *OSPF AS External route type-1*.

*ospfExtT2* - Enter this parameter to view the route preference settings for the *OSPF AS External route type-2*.

Entering this command with no parameters will display the route preference for all routes.

Restrictions      User Account Command Level – All

Example usage:

To view the route preference values for all routes:

**DES-3800:admin#show route preference**

**Command: show route preference**

**Route Preference Settings**

Route Type	Preference
RIP	100
OSPF Intra	80
STATIC	60
LOCAL	0
OSPF Inter	90
OSPF ExtT1	110
OSPF ExtT2	115

**DES-3800:admin#**

Example usage:

To view the route preference values for the RIP route:

**DES-3800:admin#show route preference rip**

**Command: show route preference rip**

**Route Preference Settings**

Route Type	Preference
RIP	100

**DES-3800:admin#**

## MAC NOTIFICATION COMMANDS

The MAC notification commands in the Command Line Interface (CLI) are listed, in the following table, along with their appropriate parameters.

Command	Parameters
enable mac_notification	
disable mac_notification	
config mac_notification	{interval <int 1-2147483647>   historysize <int 1-500>}
config mac_notification ports	[<portlist>   all] [enable   disable]
show mac_notification	
show mac_notification ports	<portlist>

Each command is listed, in detail, in the following sections.

### enable mac\_notification

Purpose	Used to enable global MAC address table notification on the Switch.
Syntax	<b>enable mac_notification</b>
Description	This command is used to enable MAC address notification without changing configuration.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable MAC notification without changing basic configuration:

```
DES-3800:admin#enable mac_notification
Command: enable mac_notification

Success.

DES-3800:admin#
```

### disable mac\_notification

Purpose	Used to disable global MAC address table notification on the Switch.
Syntax	<b>disable mac_notification</b>
Description	This command is used to disable MAC address notification without changing configuration.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable MAC notification without changing basic configuration:

```
DES-3800:admin#disable mac_notification
Command: disable mac_notification

Success.

DES-3800:admin#
```

## config mac\_notification

Purpose	Used to configure MAC address notification.
Syntax	<b>config mac_notification {interval &lt;int 1-2147483647&gt;   historysize &lt;int 1-500&gt;}</b>
Description	MAC address notification is used to monitor MAC addresses learned and entered into the FDB.
Parameters	<i>interval &lt;sec 1-2147483647&gt;</i> - The time in seconds between notifications. The user may choose an interval between 1 and 2,147,483,647 seconds. <i>historysize &lt;1-500&gt;</i> - The maximum number of entries listed in the history log used for notification.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure the Switch's MAC address table notification global settings:

```
DES-3800:admin#config mac_notification interval 1 historysize 500
Command: config mac_notification interval 1 historysize 500

Success.

DES-3800:admin#
```

## config mac\_notification ports

Purpose	Used to configure MAC address notification status settings.
Syntax	<b>config mac_notification ports [&lt;portlist&gt;   all] [enable   disable]</b>
Description	MAC address notification is used to monitor MAC addresses learned and entered into the FDB.
Parameters	<i>&lt;portlist&gt;</i> - Specify a port or range of ports to be configured. <i>all</i> – Entering this command will set all ports on the system. <i>[enable   disable]</i> – These commands will enable or disable MAC address table notification on the Switch.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable port 7 for MAC address table notification:

```
DES-3800:admin#config mac_notification ports 7 enable
Command: config mac_notification ports 7 enable

Success.

DES-3800:admin#
```

**show mac\_notification**

Purpose	Used to display the Switch's MAC address table notification global settings
Syntax	<b>show mac_notification</b>
Description	This command is used to display the Switch's MAC address table notification global settings.
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To view the Switch's MAC address table notification global settings:

```
DES-3800:admin#show mac_notification
Command: show mac_notification
```

**Global Mac Notification Settings**

```
State      : Enabled
Interval   : 1
History Size : 1
```

```
DES-3800:admin#
```

**show mac\_notification ports**

Purpose	Used to display the Switch's MAC address table notification status settings
Syntax	<b>show mac_notification ports &lt;portlist&gt;</b>
Description	This command is used to display the Switch's MAC address table notification status settings.
Parameters	<b>&lt;portlist&gt;</b> - Specify a port or group of ports to be viewed. Entering this command without the parameter will display the MAC notification table for all ports.
Restrictions	User Account Command Level – All

Example usage:

To display all port's MAC address table notification status settings:

```
DES-3800:admin#show mac_notification ports
Command: show mac_notification ports
```

```
Port #  MAC Address Table Notification State
```

Port #	MAC Address Table Notification State

## ACCESS AUTHENTICATION CONTROL COMMANDS

The TACACS / XTACACS / TACACS+ / RADIUS commands let you secure access to the Switch using the TACACS / XTACACS / TACACS+ / RADIUS protocols. When a user logs in to the Switch or tries to access the administrator level privilege, he or she is prompted for a password. If TACACS / XTACACS / TACACS+ / RADIUS authentication is enabled on the Switch, it will contact a TACACS / XTACACS / TACACS+ / RADIUS server to verify the user. If the user is verified, he or she is granted access to the Switch.

There are currently three versions of the TACACS security protocol, each a separate entity. The Switch's software supports the following versions of TACACS:

- TACACS (Terminal Access Controller Access Control System) — Provides password checking and authentication, and notification of user actions for security purposes utilizing via one or more centralized TACACS servers, utilizing the UDP protocol for packet transmission.
- Extended TACACS (XTACACS) — An extension of the TACACS protocol with the ability to provide more types of authentication requests and more types of response codes than TACACS. This protocol also uses UDP to transmit packets.
- TACACS+ (Terminal Access Controller Access Control System plus) — Provides detailed access control for authentication for network devices. TACACS+ is facilitated through Authentication commands via one or more centralized servers. The TACACS+ protocol encrypts all traffic between the Switch and the TACACS+ daemon, using the TCP protocol to ensure reliable delivery.

The Switch also supports the RADIUS protocol for authentication using the Access Authentication Control commands. RADIUS or Remote Authentication Dial In User Server also uses a remote server for authentication and can be responsible for receiving user connection requests, authenticating the user and returning all configuration information necessary for the client to deliver service through the user. RADIUS may be facilitated on this Switch using the commands listed in this section.

In order for the TACACS / XTACACS / TACACS+ / RADIUS security function to work properly, a TACACS / XTACACS / TACACS+ / RADIUS server must be configured on a device other than the Switch, called a *server host* and it must include usernames and passwords for authentication. When the user is prompted by the Switch to enter usernames and passwords for authentication, the Switch contacts the TACACS / XTACACS / TACACS+ / RADIUS server to verify, and the server will respond with one of three messages:

- A) The server verifies the username and password, and the user is granted normal user privileges on the Switch.
- B) The server will not accept the username and password and the user is denied access to the Switch.
- C) The server doesn't respond to the verification query. At this point, the Switch receives the timeout from the server and then moves to the next method of verification configured in the method list.

The Switch has four built-in *server groups*, one for each of the TACACS, XTACACS, TACACS+ and RADIUS protocols. These built-in *server groups* are used to authenticate users trying to access the Switch. The users will set *server hosts* in a preferable order in the built-in *server group* and when a user tries to gain access to the Switch, the Switch will ask the first *server host* for authentication. If no authentication is made, the second *server host* in the list will be queried, and so on. The built-in *server group* can only have hosts that are running the specified protocol. For example, the TACACS *server group* can only have TACACS *server hosts*.

The administrator for the Switch may set up five different authentication techniques per user-defined *method list* (TACACS / XTACACS / TACACS+ / RADIUS / local / none) for authentication. These techniques will be listed in an order preferable, and defined by the user for normal user authentication on the Switch, and may contain up to eight authentication techniques. When a user attempts to access the Switch, the Switch will select the first technique listed for authentication. If the first technique goes through its *server hosts* and no authentication is returned, the Switch will then go to the next technique listed in the server group for authentication, until the authentication has been verified or denied, or the list is exhausted.

Please note that user granted access to the Switch will be granted normal user privileges on the Switch. To gain access to admin level privileges, the user must enter the **enable admin** command and then enter a password, which was previously configured by the administrator of the Switch.

**NOTE:** TACACS, XTACACS and TACACS+ are separate entities and are not compatible. The Switch and the server must be configured exactly the same, using the same protocol. (For example, if the Switch is set up for TACACS authentication, so must be the host server.)

The Access Authentication Control commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
enable authen_policy	
disable authen_policy	
show authen_policy	
create authen_login method_list_name	<string 15>
config authen_login	[default   method_list_name <string 15>] method {tacacs   xtacacs   tacacs+   radius   server_group <string 15>   local   none}
delete authen_login method_list_name	<string 15>
show authen_login	{default   method_list_name <string 15>   all}
create authen_enable method_list_name	<string 15>
config authen_enable	[default   method_list_name <string 15>] method {tacacs   xtacacs   tacacs+   radius   server_group <string 15>   local_enable   none}
delete authen_enable method_list_name	<string 15>
show authen_enable	[default   method_list_name <string 15>   all]
config authen application	{console   telnet   ssh   http   all} [login   enable] [default   method_list_name <string 15>]
show authen application	
create authen server_group	<string 15>
config authen server_group	[tacacs   xtacacs   tacacs+   radius   <string 15>] [add   delete] server_host <ipaddr> protocol [tacacs   xtacacs   tacacs+   radius]
delete authen server_group	<string 15>
show authen server_group	<string 15>
create authen server_host	<ipaddr> protocol [tacacs   xtacacs   tacacs+   radius] {port <int 1-65535>   key [<key_string 254>   none]   timeout <int 1-255>   retransmit <int 1-255>}
config authen server_host	<ipaddr> protocol [tacacs   xtacacs   tacacs+   radius] {port <int 1-65535>   key [<key_string 254>   none]   timeout <int 1-255>   retransmit <int 1-255>}
delete authen server_host	<ipaddr> protocol [tacacs   xtacacs   tacacs+   radius]
show authen server_host	
config authen parameter response_timeout	<int 0-255>
config authen parameter attempt	<int 1-255>
show authen parameter	
enable admin	
config admin local_enable	
config accounting type	[exec   system] state [enable   disable]
show accounting type	

Each command is listed, in detail, in the following sections.

**enable authen\_policy**

Purpose	Used to enable system access authentication policy.
Syntax	<b>enable authen_policy</b>
Description	This command will enable an administrator-defined authentication policy for users trying to access the Switch. When enabled, the device will check the method list and choose a technique for user authentication upon login.
Parameters	None.
Restrictions	User Account Command Level – Administrator only

Example usage:

To enable the system access authentication policy:

```
DES-3800:admin#enable authen_policy
Command: enable authen_policy

Success.

DES-3800:admin#
```

**disable authen\_policy**

Purpose	Used to disable system access authentication policy.
Syntax	<b>disable authen_policy</b>
Description	This command will disable the administrator-defined authentication policy for users trying to access the Switch. When disabled, the Switch will access the local user account database for username and password verification. In addition, the Switch will now accept the local enable password as the authentication for normal users attempting to access administrator level privileges.
Parameters	None.
Restrictions	User Account Command Level – Administrator only

Example usage:

To disable the system access authentication policy:

```
DES-3800:admin#disable authen_policy
Command: disable authen_policy

Success.

DES-3800:admin#
```

**show authen\_policy**

Purpose	Used to display the system access authentication policy status on the Switch.
Syntax	<b>show authen_policy</b>
Description	This command will show the current status of the access authentication policy on the Switch.
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To display the system access authentication policy:

```
DES-3800:admin#show authen_policy
Command: show authen_policy

Authentication Policy: Enabled

DES-3800:admin#
```

## create authen\_login method\_list\_name

Purpose	Used to create a user defined method list of authentication methods for users logging on to the Switch.
Syntax	<b>create authen_login method_list_name &lt;string 15&gt;</b>
Description	This command is used to create a list for authentication techniques for user login. The Switch can support up to eight method lists, but one is reserved as a default and cannot be deleted. Multiple method lists must be created and configured separately.
Parameters	<string 15> - Enter an alphanumeric string of up to 15 characters to define the given <i>method list</i> .
Restrictions	User Account Command Level – Administrator only

Example usage:

To create the method list “Trinity.”:

```
DES-3800:admin#create authen_login method_list_name Trinity
Command: create authen_login method_list_name Trinity

Success.

DES-3800:admin#
```

## config authen\_login

Purpose	Used to configure a user-defined or default <i>method list</i> of authentication methods for user login.
Syntax	<b>config authen_login [default   method_list_name &lt;string 15&gt;] method {tacacs   xtacacs   tacacs+   radius   server_group &lt;string 15&gt;   local   none}</b>
Description	<p>This command will configure a user-defined or default <i>method list</i> of authentication methods for users logging on to the Switch. The sequence of methods implemented in this command will affect the authentication result. For example, if a user enters a sequence of methods like <i>tacacs – xtacacs – local</i>, the Switch will send an authentication request to the first <i>tacacs</i> host in the server group. If no response comes from the server host, the Switch will send an authentication request to the second <i>tacacs</i> host in the server group and so on, until the list is exhausted. At that point, the Switch will restart the same sequence with the following protocol listed, <i>xtacacs</i>. If no authentication takes place using the <i>xtacacs</i> list, the <i>local</i> account database set in the Switch is used to authenticate the user. When the local method is used, the privilege level will be dependant on the local account privilege configured on the Switch.</p> <p>Successful login using any of these methods will give the user a “user” privilege only. If the user wishes to upgrade his or her status to the administrator level, the user must implement the <i>enable admin</i> command, followed by a previously</p>

**config authen\_login**

configured password. (See the **enable admin** part of this section for more detailed information, concerning the **enable admin** command.)

**Parameters**

**default** – The default method list for access authentication, as defined by the user. The user may choose one or a combination of up to four(4) of the following authentication methods:

- **tacacs** – Adding this parameter will require the user to be authenticated using the TACACS protocol from the remote TACACS server hosts of the TACACS server group list.
- **xtacacs** – Adding this parameter will require the user to be authenticated using the XTACACS protocol from the remote XTACACS server hosts of the XTACACS server group list.
- **tacacs+** – Adding this parameter will require the user to be authenticated using the TACACS+ protocol from the remote TACACS+ server hosts of the TACACS+ server group list.
- **radius** – Adding this parameter will require the user to be authenticated using the RADIUS protocol from the remote RADIUS server hosts of the RADIUS server group list.
- **server\_group <string 15>** – Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.
- **local** – Adding this parameter will require the user to be authenticated using the local user account database on the Switch.
- **none** – Adding this parameter will require no authentication to access the Switch.

**method\_list\_name** – Enter a previously implemented method list name defined by the user. The user may add one, or a combination of up to four (4) of the following authentication methods to this method list:

- **tacacs** – Adding this parameter will require the user to be authenticated using the TACACS protocol from a remote TACACS server.
- **xtacacs** – Adding this parameter will require the user to be authenticated using the XTACACS protocol from a remote XTACACS server.
- **tacacs+** – Adding this parameter will require the user to be authenticated using the TACACS+ protocol from a remote TACACS+ server.
- **radius** – Adding this parameter will require the user to be authenticated using the RADIUS protocol from a remote RADIUS server.
- **server\_group <string 15>** – Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.
- **local** – Adding this parameter will require the user to be authenticated using the local user account database on the Switch.
- **none** – Adding this parameter will require no authentication to access the Switch.

**NOTE:** Entering **none** or **local** as an authentication protocol will override any other authentication that follows it on a method list or on the default method list.

**Restrictions**

User Account Command Level – Administrator only

Example usage:

To configure the user defined method list “Trinity” with authentication methods TACACS, XTACACS and local, in that order.

```
DES-3800:admin#config authen_login method_list_name Trinity method tacacs xtacacs local
Command: config authen_login method_list_name Trinity method tacacs xtacacs local

Success.

DES-3800:admin#
```

Example usage:

To configure the default method list with authentication methods XTACACS, TACACS+ and local, in that order:

```
DES-3800:admin#config authen_login default method xtacacs tacacs+ local
Command: config authen_login default method xtacacs tacacs+ local

Success.

DES-3800:admin#
```

## delete authen\_login method\_list\_name

Purpose	Used to delete a previously configured user defined method list of authentication methods for users logging on to the Switch.
Syntax	<b>delete authen_login method_list_name &lt;string 15&gt;</b>
Description	This command is used to delete a list for authentication methods for user login.
Parameters	<i>&lt;string 15&gt;</i> - Enter an alphanumeric string of up to 15 characters to define the given <i>method list</i> to delete.
Restrictions	User Account Command Level – Administrator only

Example usage:

To delete the method list named “Trinity”:

```
DES-3800:admin#delete authen_login method_list_name Trinity
Command: delete authen_login method_list_name Trinity

Success.

DES-3800:admin#
```

## show authen\_login

Purpose	Used to display a previously configured user defined method list of authentication methods for users logging on to the Switch.
Syntax	<b>show authen_login [default   method_list_name &lt;string 15&gt;   all]</b>
Description	This command is used to show a list of authentication methods for user login.
Parameters	<p><i>default</i> – Entering this parameter will display the default method list for users logging on to the Switch.</p> <p><i>method_list_name &lt;string 15&gt;</i> - Enter an alphanumeric string of up to 15 characters to define the given <i>method list</i> to view.</p> <p><i>all</i> – Entering this parameter will display all the authentication login</p>

**show authen\_login**

methods currently configured on the Switch.

The window will display the following parameters:

- Method List Name – The name of a previously configured method list name.
- Priority – Defines which order the method list protocols will be queried for authentication when a user attempts to log on to the Switch. Priority ranges from 1(highest) to 4 (lowest).
- Method Name – Defines which security protocols are implemented, per method list name.
- Comment – Defines the type of Method. *User-defined Group* refers to server group defined by the user. *Built-in Group* refers to the TACACS, XTACACS, TACACS+ and RADIUS security protocols which are permanently set in the Switch. *Keyword* refers to authentication using a technique INSTEAD of TACACS / XTACACS / TACACS+ / RADIUS which are local (authentication through the user account on the Switch) and none (no authentication necessary to access any function on the Switch).

Restrictions

User Account Command Level – All

Example usage:

To view the authentication login method list named Trinity:

```
DES-3800:admin#show authen_login method_list_name Trinity
```

```
Command: show authen_login method_list_name Trinity
```

Method List Name	Priority	Method Name	Comment
Trinity	1	tacacs+	Built-in Group
	2	tacacs	Built-in Group
	3	Darren	User-defined Group
	4	local	Keyword

```
DES-3800:admin#
```

**create authen\_enable method\_list\_name**

**Purpose** Used to create a user-defined method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.

**Syntax** **create authen\_enable method\_list\_name <string 15>**

**Description** This command is used to promote users with normal level privileges to Administrator level privileges using authentication methods on the Switch. Once a user acquires normal user level privileges on the Switch, he or she must be authenticated by a method on the Switch to gain administrator privileges on the Switch, which is defined by the Administrator. A maximum of eight (8) enable method lists can be implemented on the Switch.

**Parameters** <string 15> - Enter an alphanumeric string of up to 15 characters to define the given *enable method list* to create.

**Restrictions** User Account Command Level – Administrator only

Example usage:

To create a user-defined method list, named “Permit” for promoting user privileges to Administrator privileges:

```
DES-3800:admin#create authen_enable method_list_name Permit
Command: show authen_login method_list_name Permit

Success.

DES-3800:admin#
```

## config authen\_enable

Purpose	Used to configure a user-defined method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.
Syntax	<b>config authen_enable [default   method_list_name &lt;string 15&gt;] method {tacacs   xtacacs   tacacs+   radius   server_group &lt;string 15&gt;   local_enable   none}</b>
Description	<p>This command is used to promote users with normal level privileges to Administrator level privileges using authentication methods on the Switch. Once a user acquires normal user level privileges on the Switch, he or she must be authenticated by a method on the Switch to gain administrator privileges on the Switch, which is defined by the Administrator. A maximum of eight (8) enable method lists can be implemented simultaneously on the Switch.</p> <p>The sequence of methods implemented in this command will affect the authentication result. For example, if a user enters a sequence of methods like <i>tacacs – xtacacs – local_enable</i>, the Switch will send an authentication request to the first TACACS host in the server group. If no verification is found, the Switch will send an authentication request to the second TACACS host in the server group and so on, until the list is exhausted. At that point, the Switch will restart the same sequence with the following protocol listed, XTACACS. If no authentication takes place using the XTACACS list, the <i>local_enable</i> password set in the Switch is used to authenticate the user.</p> <p>Successful authentication using any of these methods will give the user an "Admin" level privilege.</p>
Parameters	<p><b>default</b> – The default method list for administration rights authentication, as defined by the user. The user may choose one or a combination of up to four (4) of the following authentication methods:</p> <ul style="list-style-type: none"> <li>▪ <i>tacacs</i> – Adding this parameter will require the user to be authenticated using the TACACS protocol from the remote TACACS <i>server hosts</i> of the TACACS <i>server group</i> list.</li> <li>▪ <i>xtacacs</i> – Adding this parameter will require the user to be authenticated using the XTACACS protocol from the remote XTACACS <i>server hosts</i> of the XTACACS <i>server group</i> list.</li> <li>▪ <i>tacacs+</i> – Adding this parameter will require the user to be authenticated using the TACACS+ protocol from the remote TACACS+ <i>server hosts</i> of the TACACS+ <i>server group</i> list.</li> <li>▪ <i>radius</i> – Adding this parameter will require the user to be authenticated using the RADIUS protocol from the remote RADIUS <i>server hosts</i> of the RADIUS <i>server group</i> list.</li> <li>▪ <i>server_group &lt;string 15&gt;</i> - Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.</li> <li>▪ <i>local_enable</i> - Adding this parameter will require the user to be authenticated using the local <i>user account</i> database on the Switch.</li> <li>▪ <i>none</i> – Adding this parameter will require no authentication to access the Switch.</li> </ul>

## config authen\_enable

*method\_list\_name* – Enter a previously implemented method list name defined by the user (*create authen\_enable*). The user may add one, or a combination of up to four (4) of the following authentication methods to this method list:

- *tacacs* – Adding this parameter will require the user to be authenticated using the TACACS protocol from a remote TACACS server.
- *xtacacs* – Adding this parameter will require the user to be authenticated using the XTACACS protocol from a remote XTACACS server.
- *tacacs+* – Adding this parameter will require the user to be authenticated using the TACACS+ protocol from a remote TACACS+ server.
- *radius* – Adding this parameter will require the user to be authenticated using the RADIUS protocol from a remote RADIUS server.
- *server\_group <string 15>* – Adding this parameter will require the user to be authenticated using a user-defined server group previously configured on the Switch.
- *local\_enable* – Adding this parameter will require the user to be authenticated using the local *user account* database on the Switch. The local enable password of the device can be configured using the “**config admin local\_password**” command.
- *none* – Adding this parameter will require no authentication to access the administration level privileges on the Switch.

Restrictions

User Account Command Level – Administrator only

Example usage:

To configure the user defined method list “Permit” with authentication methods TACACS, XTACACS and local, in that order.

```
DES-3800:admin#config authen_enable method_list_name Trinity method tacacs xtacacs local
Command: config authen_enable method_list_name Trinity method tacacs xtacacs local
Success.
DES-3800:admin#
```

Example usage:

To configure the default method list with authentication methods XTACACS, TACACS+ and local, in that order:

```
DES-3800:admin#config authen_enable default method xtacacs tacacs+ local
Command: config authen_enable default method xtacacs tacacs+ local
Success.
DES-3800:admin#
```

## delete authen\_enable method\_list\_name

**Purpose** Used to delete a user-defined method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.

**Syntax** **delete authen\_enable method\_list\_name <string 15>**

**delete authen\_enable method\_list\_name**

Description	This command is used to delete a user-defined method list of authentication methods for promoting user level privileges to Administrator level privileges.
Parameters	<string 15> - Enter an alphanumeric string of up to 15 characters to define the given <i>enable method list</i> to delete.
Restrictions	User Account Command Level – Administrator only

Example usage:

To delete the user-defined method list “Permit”

```
DES-3800:admin#delete authen_enable method_list_name Permit
Command: delete authen_enable method_list_name Permit

Success.

DES-3800:admin#
```

**show authen\_enable**

Purpose	Used to display the method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.
Syntax	<b>show authen_enable [default   method_list_name &lt;string 15&gt;   all]</b>
Description	This command is used to delete a user-defined method list of authentication methods for promoting user level privileges to Administrator level privileges.
Parameters	<p><i>default</i> – Entering this parameter will display the default method list for users attempting to gain access to Administrator level privileges on the Switch.</p> <p><i>method_list_name</i> &lt;string 15&gt; - Enter an alphanumeric string of up to 15 characters to define the given <i>method list</i> to view.</p> <p><i>all</i> – Entering this parameter will display all the authentication login methods currently configured on the Switch.</p> <p>The window will display the following parameters:</p> <ul style="list-style-type: none"> <li>Method List Name – The name of a previously configured method list name.</li> <li>Priority – Defines which order the method list protocols will be queried for authentication when a user attempts to log on to the Switch. Priority ranges from 1(highest) to 4 (lowest).</li> <li>Method Name – Defines which security protocols are implemented, per method list name.</li> <li>Comment – Defines the type of Method. <i>User-defined Group</i> refers to <i>server groups</i> defined by the user. <i>Built-in Group</i> refers to the TACACS, XTACACS, TACACS+ and RADIUS security protocols which are permanently set in the Switch. <i>Keyword</i> refers to authentication using a technique INSTEAD of TACACS/XTACACS/TACACS+/RADIUS which are local (authentication through the <i>local_enable</i> password on the Switch) and none (no authentication necessary to access any function on the Switch).</li> </ul>
Restrictions	User Account Command Level – All

Example usage:

To display all method lists for promoting user level privileges to administrator level privileges.

```
DES-3800:admin#show authen_enable all
Command: show authen_enable all
```

Method List Name	Priority	Method Name	Comment
Permit	1	tacacs+	Built-in Group
	2	tacacs	Built-in Group
	3	Darren	User-defined Group
	4	local	Keyword
default	1	tacacs+	Built-in Group
	2	local	Keyword

```
Total Entries : 2
DES-3800:admin#
```

## config authen application

Purpose	Used to configure various applications on the Switch for authentication using a previously configured method list.
Syntax	<b>config authen application [console   telnet   ssh   http   all] [login   enable] [default   method_list_name &lt;string 15&gt;]</b>
Description	This command is used to configure Switch configuration applications (console, Telnet, SSH, HTTP) for login at the user level and at the administration level ( <i>authen_enable</i> ) utilizing a previously configured method list.
Parameters	<p><i>application</i> – Choose the application to configure. The user may choose one of the following five options to configure.</p> <ul style="list-style-type: none"> <li>▪ <i>console</i> – Choose this parameter to configure the command line interface login method.</li> <li>▪ <i>telnet</i> – Choose this parameter to configure the telnet login method.</li> <li>▪ <i>ssh</i> – Choose this parameter to configure the Secure Shell login method.</li> <li>▪ <i>http</i> – Choose this parameter to configure the web interface login method.</li> <li>▪ <i>all</i> – Choose this parameter to configure all applications (console, telnet, ssh, web) login method.</li> </ul> <p><i>login</i> – Use this parameter to configure an application for normal login on the user level, using a previously configured method list.</p> <p><i>enable</i> - Use this parameter to configure an application for upgrading a normal user level to administrator privileges, using a previously configured method list.</p> <p><i>default</i> – Use this parameter to configure an application for user authentication using the default method list.</p> <p><i>method_list_name &lt;string 15&gt;</i> - Use this parameter to configure an application for user authentication using a previously configured method list. Enter a alphanumeric string of up to 15 characters to define a previously configured method list.</p>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To configure the default method list for the web interface:

```
DES-3800:admin#config authen application http login default
Command: config authen application http login default
```

Success.

```
DES-3800:admin#
```

## show authen application

Purpose	Used to display authentication methods for the various applications on the Switch.
Syntax	<b>show authen application</b>
Description	This command will display all of the authentication method lists (login, enable administrator privileges) for Switch configuration applications (console, telnet, ssh, web) currently configured on the Switch.
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To display the login and enable method list for all applications on the Switch:

```
DES-3800:admin#show authen application
Command: show authen application
```

Application	Login Method List	Enable Method List
Console	default	default
Telnet	Trinity	default
SSH	default	default
HTTP	default	default

```
DES-3800:admin#
```

## create authen server\_host

Purpose	Used to create an authentication server host.
Syntax	<b>create authen server_host &lt;ipaddr&gt; protocol [tacacs   xtacacs   tacacs+   radius] {port &lt;int 1-65535&gt;   key [&lt;key_string 254&gt;   none]   timeout &lt;int 1-255&gt;   retransmit &lt; 1-255&gt;}</b>
Description	This command will create an authentication server host for the TACACS/XTACACS/TACACS+/RADIUS security protocols on the Switch. When a user attempts to access the Switch with authentication protocol enabled, the Switch will send authentication packets to a remote TACACS/XTACACS/TACACS+/RADIUS server host on a remote host. The TACACS/XTACACS/TACACS+/RADIUS server host will then verify or deny the request and return the appropriate message to the Switch. More than one authentication protocol can be run on the same physical server host but, remember that TACACS/XTACACS/TACACS+/RADIUS are separate entities and are not compatible with each other. The maximum supported number of server hosts is 16.
Parameters	<i>server_host</i> <ipaddr> - The IP address of the remote server host to add. <i>protocol</i> – The protocol used by the server host. The user may

**create authen server\_host**

choose one of the following:

- *tacacs* – Enter this parameter if the server host utilizes the TACACS protocol.
- *xtacacs* - Enter this parameter if the server host utilizes the XTACACS protocol.
- *tacacs+* - Enter this parameter if the server host utilizes the TACACS+ protocol.
- *radius* - Enter this parameter if the server host utilizes the RADIUS protocol.

*port* <int 1-65535> - Enter a number between 1 and 65535 to define the virtual port number of the authentication protocol on a server host. The default port number is 49 for TACACS/XTACACS/TACACS+ servers and 1812 and 1813 for RADIUS servers but the user may set a unique port number for higher security.

*key* <key\_string 254> - Authentication key to be shared with a configured TACACS+ or RADIUS server only. Specify an alphanumeric string up to 254 characters.

*timeout* <int 1-255> - Enter the time in seconds the Switch will wait for the server host to reply to an authentication request. The default value is 5 seconds.

*retransmit* <int 1-255> - Enter the value in the retransmit field to change how many times the device will resend an authentication request when the server does not respond.

Restrictions

User Account Command Level – Administrator only

Example usage:

To create a TACACS+ authentication server host, with port number 1234, a timeout value of 10 seconds and a retransmit count of 5.

```
DES-3800:admin#create authen server_host 10.1.1.121 protocol tacacs+
port 1234 timeout 10 retransmit 5
```

```
Command: create authen server_host 10.1.1.121 protocol tacacs+ port
1234 timeout 10 retransmit 5
```

Success.

```
DES-3800:admin#
```

**config authen server\_host**

Purpose	Used to configure a user-defined authentication server host.
Syntax	<b>create authen server_host</b> <ipaddr> protocol [tacacs   xtacacs   tacacs+   radius] {port <int 1-65535>   key [<key_string 254>   none]   timeout <int 1-255>   retransmit <1-255>}
Description	This command will configure a user-defined authentication server host for the TACACS/XTACACS/TACACS+/RADIUS security protocols on the Switch. When a user attempts to access the Switch with the authentication protocol enabled, the Switch will send authentication packets to a remote TACACS/XTACACS/TACACS+/RADIUS server host on a remote host. The TACACS/XTACACS/TACACS+/RADIUS server host will then verify or deny the request and return the appropriate message to the Switch. More than one authentication protocol can be run on the same physical server host but, remember that TACACS/XTACACS/TACACS+/RADIUS are separate entities and are not compatible with each other. The maximum

**config authen server\_host**

	supported number of server hosts is 16.
Parameters	<p><i>server_host</i> &lt;ipaddr&gt; - The IP address of the remote server host the user wishes to alter.</p> <p><i>protocol</i> – The protocol used by the server host. The user may choose one of the following:</p> <ul style="list-style-type: none"> <li>▪ <i>tacacs</i> – Enter this parameter if the server host utilizes the TACACS protocol.</li> <li>▪ <i>xtacacs</i> - Enter this parameter if the server host utilizes the XTACACS protocol.</li> <li>▪ <i>tacacs+</i> - Enter this parameter if the server host utilizes the TACACS+ protocol.</li> <li>▪ <i>radius</i> - Enter this parameter if the server host utilizes the RADIUS protocol.</li> </ul> <p><i>port</i> &lt;int 1-65535&gt; - Enter a number between 1 and 65535 to define the virtual port number of the authentication protocol on a server host. The default port number is 49 for TACACS/XTACACS/TACACS+ servers and 1812 and 1813 for RADIUS servers but the user may set a unique port number for higher security.</p> <p><i>key</i> &lt;key_string 254&gt; - Authentication key to be shared with a configured TACACS+ or RADIUS server only. Specify an alphanumeric string up to 254 characters or choose none.</p> <p><i>timeout</i> &lt;int 1-255&gt; - Enter the time in seconds the Switch will wait for the server host to reply to an authentication request. The default value is 5 seconds.</p> <p><i>retransmit</i> &lt;int 1-255&gt; - Enter the value in the retransmit field to change how many times the device will resend an authentication request when the server does not respond. This field is inoperable for the TACACS+ protocol.</p>
Restrictions	User Account Command Level – Administrator only

## Example usage:

To configure a TACACS+ authentication server host, with port number 4321, a timeout value of 12 seconds and a retransmit count of 4.

```
DES-3800:admin#config authen server_host 10.1.1.121 protocol
tacacs+ port 4321 timeout 12 retransmit 4
Command: config authen server_host 10.1.1.121 protocol tacacs+ port
4321 timeout 12 retransmit 4

Success.

DES-3800:admin#
```

**delete authen server\_host**

Purpose	Used to delete a user-defined authentication server host.
Syntax	<b>delete authen server_host &lt;ipaddr&gt; protocol [tacacs   xtacacs   tacacs+   radius]</b>
Description	This command is used to delete a user-defined authentication server host previously created on the Switch.
Parameters	<p><i>server_host</i> &lt;ipaddr&gt; - The IP address of the remote server host to be deleted.</p> <p><i>protocol</i> – The protocol used by the server host to delete. The user</p>

## delete authen server\_host

may choose one of the following:

- *tacacs* – Enter this parameter if the server host utilizes the TACACS protocol.
- *xtacacs* - Enter this parameter if the server host utilizes the XTACACS protocol.
- *tacacs+* - Enter this parameter if the server host utilizes the TACACS+ protocol.
- *radius* - Enter this parameter if the server host utilizes the RADIUS protocol.

Restrictions

User Account Command Level – Administrator only

Example usage:

To delete a user-defined TACACS+ authentication server host:

```
DES-3800:admin#delete authen server_host 10.1.1.121 protocol tacacs+
Command: delete authen server_host 10.1.1.121 protocol tacacs+
```

Success.

```
DES-3800:admin#
```

## show authen server\_host

Purpose	Used to view a user-defined authentication server host.
Syntax	<b>show authen server_host</b>
Description	<p>This command is used to view user-defined authentication server hosts previously created on the Switch.</p> <p>The following parameters are displayed:</p> <p>IP Address – The IP address of the authentication server host.</p> <p>Protocol – The protocol used by the server host. Possible results will include TACACS, XTACACS, TACACS+ or RADIUS.</p> <p>Port – The virtual port number on the server host. The default value is 49.</p> <p>Timeout - The time in seconds the Switch will wait for the server host to reply to an authentication request.</p> <p>Retransmit - The value in the retransmit field denotes how many times the device will resend an authentication request when the TACACS server does not respond. This field is inoperable for the tacacs+ protocol.</p> <p>Key - Authentication key to be shared with a configured TACACS+ server only.</p>
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To view authentication server hosts currently set on the Switch:

```
DES-3800:admin#show authen server_host
```

```
Command: show authen server_host
```

IP Address	Protocol	Port	Timeout	Retransmit	Key
10.53.13.94	TACACS	49	5	2	No Use

```
Total Entries : 1
```

```
DES-3800:admin#
```

## create authen server\_group

Purpose	Used to create a user-defined authentication server group.
Syntax	<b>create authen server_group &lt;string 15&gt;</b>
Description	This command will create an authentication server group. A server group is a technique used to group TACACS/XTACACS/TACACS+/RADIUS server hosts into user defined categories for authentication using method lists. The user may add up to eight (8) authentication server hosts to this group using the <b>config authen server_group</b> command.
Parameters	<i>&lt;string 15&gt;</i> - Enter an alphanumeric string of up to 15 characters to define the newly created server group.
Restrictions	User Account Command Level – Administrator only

Example usage:

To create the server group “group\_1”:

```
DES-3800:admin#create authen server_group group_1
```

```
Command: create authen server_group group_1
```

```
Success.
```

```
DES-3800:admin#
```

## config authen server\_group

Purpose	Used to configure a user-defined authentication server group.
Syntax	<b>config authen server_group [tacacs   xtacacs   tacacs+   radius   &lt;string 15&gt;] [add   delete] server_host &lt;ipaddr&gt; protocol [tacacs   xtacacs   tacacs+   radius]</b>
Description	This command will configure an authentication server group. A server group is a technique used to group TACACS/XTACACS/TACACS+/RADIUS server hosts into user defined categories for authentication using method lists. The user may define the type of server group by protocol or by previously defined server group. Up to eight (8) authentication server hosts may be added to any particular group
Parameters	<p><i>server_group</i> - The user may define the group by protocol groups built into the Switch (TACACS/XTACACS/TACACS+/RADIUS), or by a user-defined group previously created using the <b>create authen server_group</b> command.</p> <ul style="list-style-type: none"> <li><i>tacacs</i> – Use this parameter to utilize the built-in TACACS server protocol on the Switch. Only server hosts utilizing the TACACS protocol may be added to this group.</li> <li><i>xtacacs</i> – Use this parameter to utilize the built-in XTACACS server</li> </ul>

## config authen server\_group

protocol on the Switch. Only server hosts utilizing the XTACACS protocol may be added to this group.

- *tacacs+* – Use this parameter to utilize the built-in TACACS+ server protocol on the Switch. Only server hosts utilizing the TACACS+ protocol may be added to this group.
- *radius* – Use this parameter to utilize the built-in RADIUS server protocol on the Switch. Only server hosts utilizing the RADIUS protocol may be added to this group.
- *<string 15>* - Enter an alphanumeric string of up to 15 characters to define the previously created server group. This group may add any combination of server hosts to it, regardless of protocol.

*add/delete* – Enter the correct parameter to add or delete a server host from a server group.

*server\_host <ipaddr>* - Enter the IP address of the previously configured server host to add or delete.

*protocol* – Enter the protocol utilized by the server host. There are three options:

- *tacacs* – Use this parameter to define the protocol if the server host is using the TACACS authentication protocol.
- *xtacacs* – Use this parameter to define the protocol if the server host is using the XTACACS authentication protocol.
- *tacacs+* – Use this parameter to define the protocol if the server host is using the TACACS+ authentication protocol.
- *radius* – Use this parameter to define the protocol if the server host is using the RADIUS authentication protocol.

Restrictions

User Account Command Level – Administrator only

Example usage:

To add an authentication host to server group “group\_1”:

```
DES-3800:admin# config authen server_group group_1 add
server_host 10.1.1.121 protocol tacacs+
Command: config authen server_group group_1 add server_host
10.1.1.121 protocol tacacs+

Success.

DES-3800:admin#
```

## delete authen server\_group

Purpose Used to delete a user-defined authentication server group.

Syntax **delete authen server\_group <string 15>**

Description This command will delete an authentication server group.

Parameters *<string 15>* - Enter an alphanumeric string of up to 15 characters to define the previously created server group to be deleted.

Restrictions User Account Command Level – Administrator only

Example usage:

To delete the server group “group\_1”:

```
DES-3800:admin#delete server_group group_1
Command: delete server_group group_1

Success.

DES-3800:admin#
```

## show authen server\_group

Purpose	Used to view authentication server groups on the Switch.
Syntax	<b>show authen server_group &lt;string 15&gt;</b>
Description	This command will display authentication server groups currently configured on the Switch.  This command will display the following fields: Group Name: The name of the server group currently configured on the Switch, including built in groups and user defined groups. IP Address: The IP address of the server host. Protocol: The authentication protocol used by the server host.
Parameters	<b>&lt;string 15&gt;</b> - Enter an alphanumeric string of up to 15 characters to define the previously created server group to be viewed.  Entering this command without the <b>&lt;string&gt;</b> parameter will display all authentication server groups on the Switch.
Restrictions	User Account Command Level – All

Example usage:

To view authentication server groups currently set on the Switch.

```
DES-3800:admin#show authen server_group
Command: show authen server_group

Group Name  IP Address          Protocol
-----
Darren      10.53.13.2          TACACS
tacacs      10.53.13.94         TACACS
tacacs+     (This group has no entry)
xtacacs     (This group has no entry)

Total Entries : 4

DES-3800:admin#
```

## config authen parameter response\_timeout

Purpose	Used to configure the amount of time the Switch will wait for a user to enter authentication before timing out.
Syntax	<b>config authen parameter response_timeout &lt;int 0-255&gt;</b>
Description	This command will set the time the Switch will wait for a response of authentication from the user.
Parameters	<b>response_timeout &lt;int 0-255&gt;</b> - Set the time, in seconds, the Switch will wait for a response of authentication from the user attempting to log in from the command line interface or telnet interface. <i>0</i> disables the timeout for the response. The default value is 30 seconds.
Restrictions	User Account Command Level – Administrator only

Example usage:

To configure the response timeout for 60 seconds:

```
DES-3800:admin# config authen parameter response_timeout 60
Command: config authen parameter response_timeout 60

Success.

DES-3800:admin#
```

## config authen parameter attempt

Purpose	Used to configure the maximum number of times the Switch will accept authentication attempts.
Syntax	<b>config authen parameter attempt &lt;int 1-255&gt;</b>
Description	This command will configure the maximum number of times the Switch will accept authentication attempts. Users failing to be authenticated after the set amount of attempts will be denied access to the Switch and will be locked out of further authentication attempts. Command line interface users will have to wait 60 seconds before another authentication attempt. Telnet users will be disconnected from the Switch.
Parameters	<i>parameter attempt &lt;int 1-255&gt;</i> - Set the maximum number of attempts the user may try to become authenticated by the Switch, before being locked out.
Restrictions	User Account Command Level – Administrator only

Example usage:

To set the maximum number of authentication attempts at 5:

```
DES-3800:admin# config authen parameter attempt 5
Command: config authen parameter attempt 5

Success.

DES-3800:admin#
```

## show authen parameter

Purpose	Used to display the authentication parameters currently configured on the Switch.
Syntax	<b>show authen parameter</b>
Description	<p>This command will display the authentication parameters currently configured on the Switch, including the response timeout and user authentication attempts.</p> <p>This command will display the following fields:</p> <p>Response timeout – The configured time allotted for the Switch to wait for a response of authentication from the user attempting to log in from the command line interface or telnet interface.</p> <p>User attempts - The maximum number of attempts the user may try to become authenticated by the Switch, before being locked out.</p>
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To view the authentication parameters currently set on the Switch:

```
DES-3800:admin#show authen parameter
Command: show authen parameter
```

```
Response timeout : 60 seconds
User attempts    : 5
```

```
DES-3800:admin#
```

## enable admin

Purpose	Used to promote user level privileges to administrator level privileges
Syntax	<b>enable admin</b>
Description	This command is for users who have logged on to the Switch on the normal user level, to become promoted to the administrator level. After logging on to the Switch users will have only user level privileges. To gain access to administrator level privileges, the user will enter this command and will have to enter an authentication password. Possible authentication methods for this function include TACACS, XTACACS, TACACS+, RADIUS, user defined server groups, local enable (local account on the Switch), or no authentication ( <i>none</i> ). Because XTACACS and TACACS do not support the enable function, the user must create a special account on the server host which has the username "enable", and a password configured by the administrator that will support the "enable" function. This function becomes inoperable when the authentication policy is disabled.
Parameters	None.
Restrictions	User Account Command Level – Administrator only

Example usage:

To enable administrator privileges on the Switch:

```
DES-3800:admin#enable admin
```

```
Password: *****
```

```
DES-3800:admin#
```

## config admin local\_enable

Purpose	Used to configure the local enable password for administrator level privileges.
Syntax	<b>config admin local_enable</b>
Description	This command will configure the locally enabled password for the <b>enable admin</b> command. When a user chooses the " <i>local_enable</i> " method to promote user level privileges to administrator privileges, he or she will be prompted to enter the password configured here, that is set locally on the Switch.
Parameters	<password 15> - After entering this command, the user will be prompted to enter the old password, then a new password in an alphanumeric string of no more than 15 characters, and finally prompted to enter the new password again for confirmation. See the example below.
Restrictions	User Account Command Level – Administrator only

Example usage:

To configure the password for the “local\_enable” authentication method.

```
DES-3800:admin#config admin local_enable
Command: config admin local_enable

Enter the old password:
Enter the case-sensitive new password:*****
Enter the new password again for confirmation:*****
Success.

DES-3800:admin#
```

## config accounting type

Purpose	Used to configure the accounting feature of the Switch, which will employ a remote RADIUS server to collect information regarding events occurring on the Switch.
Syntax	<b>config accounting type [exec   system] state [enable   disable]</b>
Description	<p>This command will employ a remote RADIUS server to collect information regarding events occurring on the Switch. Possible switch events which will trigger the sending of information to the RADIUS server once this feature is enabled are as follows:</p> <ul style="list-style-type: none"> <li>- Account Session ID</li> <li>- Account Session Time</li> <li>- Account Status Type</li> <li>- Username</li> <li>- Account Terminate Cause</li> <li>- Service Type</li> <li>- Account Authentic</li> <li>- NAS IP Address</li> <li>- Account Delay Time</li> <li>- Calling Station ID</li> <li>- NAS Identifier</li> </ul> <p>This command is dependant on the configuration of a RADIUS server, both on the Switch, and remotely, so that the RADIUS server has the proper configurations to both collect and process the information that is being relayed to it by the Switch.</p>
Parameters	<p><b>type</b> – Choose the type of accounting that the Switch will use. The user may choose one of the following two choices.</p> <ul style="list-style-type: none"> <li>• <b>exec</b> – When enabled, the Switch will send informational packets to a remote RADIUS server when a user either logs in, logs out or times out on the Switch, using the console, Telnet or SSH.</li> <li>• <b>system</b> – When enabled, the Switch will send informational packets to a remote RADIUS server when system events occur on the Switch, such as a system reset or system boot.</li> </ul> <p><b>state [enable   disable]</b> – Choose whether to enable or disable the accounting type previously chosen.</p>
Restrictions	User Account Command Level – Administrator only

Example usage:

To enable the system accounting state:

```
DES-3800:admin#config accounting type system state enable
Command : config accounting type system state enable

Success.

DES-3800:admin#
```

**show accounting type**

Purpose	Used to view the accounting feature's current status on the Switch.
Syntax	<b>show accounting type</b>
Description	<p>This command will display the current status of the accounting feature on the Switch. Possible switch events which will trigger the sending of information to the RADIUS server once this feature is enabled are as follows:</p> <ul style="list-style-type: none"> <li>- Account Session ID</li> <li>- Account Status Type</li> <li>- Account Terminate Cause</li> <li>- Account Authentic</li> <li>- Account Delay Time</li> <li>- NAS Identifier</li> <li>- Account Session Time</li> <li>- Username</li> <li>- Service Type</li> <li>- NAS IP Address</li> <li>- Calling Station ID</li> </ul> <p>This feature is dependant on the configuration of a RADIUS server, both on the Switch, and remotely, so that the RADIUS server has the proper configurations to both collect and process the information that is being relayed to it by the Switch.</p>
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To display the system accounting state:

```

DES-3800:admin#show accounting type
Command : show accounting type

Accounting State
-----
Exec      : Disable
System    : Disable

DES-3800:admin#

```

## SSH COMMANDS

The steps required to use the Secure Shell (SSH) protocol for secure communication between a remote PC (the SSH Client) and the Switch (the SSH Server), are as follows:

1. Create a user account with admin-level access using the **create account admin <username> <password>** command. This is identical to creating any other admin-level user account on the Switch, including specifying a password. This password is used to login to the Switch, once secure communication has been established using the SSH protocol.
2. Configure the user account to use a specified authorization method to identify users that are allowed to establish SSH connections with the Switch using the **config ssh user authmode** command. There are three choices as to the method SSH will use to authorize the user, and they are password, publickey and hostbased.
3. Configure the encryption algorithm that SSH will use to encrypt and decrypt messages sent between the SSH Client and the SSH Server.
4. Finally, enable SSH on the Switch using the **enable ssh** command.

After following the above steps, you can configure an SSH Client on the remote PC and manage the Switch using secure, in-band communication.

The Secure Shell (SSH) commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
enable ssh	
disable ssh	
config ssh authmode	[password   publickey   hostbased] [enable   disable]
show ssh authmode	
config ssh server	{maxsession <int 1-8>   contimeout <sec 120-600>   authfail <int 2-20>   rekey [10min   30min   60min   never]}
show ssh server	
config ssh user	<username> authmode [hostbased [hostname <domain_name>   hostname_IP <domain_name> <ipaddr>]   password   publickey]
show ssh user authmode	
config ssh algorithm	[3DES   AES128   AES192   AES256   arcfour   blowfish   cast128   twofish128   twofish192   twofish256   MD5   SHA1   RSA   DSA] [enable   disable]
show ssh algorithm	
config ssh regenerate hostkey	

Each command is listed, in detail, in the following sections.

### enable ssh

Purpose	Used to enable SSH.
Syntax	<b>enable ssh</b>
Description	This command allows you to enable SSH on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To enable SSH:

```
DES-3800:admin#enable ssh
```

```
Command: enable ssh
```

```
Success.
```

```
DES-3800:admin#
```

## disable ssh

Purpose	Used to disable SSH.
Syntax	<b>disable ssh</b>
Description	This command allows you to disable SSH on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To disable SSH:

```
DES-3800:admin# disable ssh
```

```
Command: disable ssh
```

```
Success.
```

```
DES-3800:admin#
```

## config ssh authmode

Purpose	Used to configure the SSH authentication mode setting.
Syntax	<b>config ssh authmode [password   publickey   hostbased] [enable   disable]</b>
Description	This command will allow you to configure the SSH authentication mode for users attempting to access the Switch.
Parameters	<p><i>password</i> – This parameter may be chosen if the administrator wishes to use a locally configured password for authentication on the Switch.</p> <p><i>publickey</i> - This parameter may be chosen if the administrator wishes to use a publickey configuration set on a SSH server, for authentication.</p> <p><i>hostbased</i> - This parameter may be chosen if the administrator wishes to use a host computer for authentication. This parameter is intended for Linux users requiring SSH authentication techniques and the host computer is running the Linux operating system with a SSH program previously installed.</p> <p><i>[enable   disable]</i> - This allows you to enable or disable SSH authentication on the Switch.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable the SSH authentication mode by password:

```
DES-3800:admin#config ssh authmode password enable
```

```
Command: config ssh authmode password enable
```

```
Success.
```

```
DES-3800:admin#
```

## show ssh authmode

Purpose	Used to display the SSH authentication mode setting.
Syntax	<b>show ssh authmode</b>
Description	This command will allow you to display the current SSH authentication set on the Switch.
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To view the current authentication mode set on the Switch:

```
DES-3800:admin#show ssh authmode
```

```
Command: show ssh authmode
```

```
The SSH authmode:
```

```
Password : Enabled
```

```
Publickey : Enabled
```

```
Hostbased : Enabled
```

```
DES-3800:admin#
```

## config ssh server

Purpose	Used to configure the SSH server.
Syntax	<b>config ssh server {maxsession &lt;int 1-8&gt;   timeout &lt;sec 120-600&gt;   authfail &lt;int 2-20&gt;   rekey [10min   30min   60min   never]}</b>
Description	This command allows you to configure the SSH server.
Parameters	<p><i>maxsession &lt;int 1-8&gt;</i> - Allows the user to set the number of users that may simultaneously access the Switch. The default setting is 8.</p> <p><i>timeout &lt;sec 120-600&gt;</i> - Allows the user to set the connection timeout. The user may set a time between 120 and 600 seconds. The default is 300 seconds.</p> <p><i>authfail &lt;int 2-20&gt;</i> - Allows the administrator to set the maximum number of attempts that a user may try to logon utilizing SSH authentication. After the maximum number of attempts is exceeded, the Switch will be disconnected and the user must reconnect to the Switch to attempt another login.</p> <p><i>rekey [10min   30min   60min   never]</i> - Sets the time period that the Switch will change the security shell encryptions.</p>
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To configure the SSH server:

```
DES-3800:admin# config ssh server maxsession 2 contimeout 300 authfail 2
Command: config ssh server maxsession 2 contimeout 300 authfail 2

Success.

DES-3800:admin#
```

## show ssh server

Purpose	Used to display the SSH server setting.
Syntax	<b>show ssh server</b>
Description	This command allows you to display the current SSH server setting.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Usage Example:

To display the SSH server:

```
DES-3800:admin# show ssh server
Command: show ssh server

The SSH server configuration
max Session      : 8
Connection timeout : 300
Authfail attempts : 2
Rekey timeout    : never
port             : 22

DES-3800:admin#
```

## config ssh user

Purpose	Used to configure the SSH user.
Syntax	<b>config ssh user &lt;username&gt; authmode {hostbased [hostname &lt;domain_name&gt;   hostname_IP &lt;domain_name&gt; &lt;ipaddr&gt;]   password   publickey}</b>
Description	This command allows configuration of the SSH user authentication method.
Parameters	<p><b>&lt;username&gt;</b> - Enter a username of no more than 15 characters to identify the SSH user.</p> <p><b>authmode</b> – Specifies the authentication mode of the SSH user wishing to log on to the Switch. The administrator may choose between:</p> <ul style="list-style-type: none"> <li><i>hostbased</i> – This parameter should be chosen if the user wishes to use a remote SSH server for authentication purposes. Choosing this parameter requires the user to input the following information to identify the SSH user.</li> <li><i>hostname &lt;domain_name&gt;</i> - Enter an alphanumeric string of up to 32 characters identifying the remote SSH user.</li> <li><i>hostname_IP &lt;domain_name&gt; &lt;ipaddr&gt;</i> - Enter the hostname and the corresponding IP address of the SSH user.</li> </ul> <p><b>password</b> – This parameter should be chosen if the user wishes to</p>

## config ssh user

	use an administrator defined password for authentication. <i>publickey</i> – This parameter should be chosen to use the publickey on a SSH server for authentication.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To configure the SSH user:

```
DES-3800:admin# config ssh user Trinity authmode Password
Command: config ssh user Trinity authmode Password

Success.

DES-3800:admin#
```

## show ssh user

Purpose	Used to display the SSH user setting.
Syntax	<b>show ssh user</b>
Description	This command allows you to display the current SSH user setting.
Parameters	None.
Restrictions	User Account Command Level – Administrator only

Example usage:

To display the SSH user:

```
DES-3800:admin#show ssh user
Command: show ssh user

Current Accounts:
UserName          Authentication
-----          -
Trinity           Publickey

DES-3800:admin#
```

**Note:** To configure the SSH user, the administrator must create a user account on the Switch. For information concerning configuring a user account, please see the section of this manual entitled **Basic Switch Commands** and then the command, **create user account**.

## config ssh algorithm

Purpose	Used to configure the SSH algorithm.
Syntax	<b>config ssh algorithm [3DES   AES128   AES192   AES256   arcfour   blowfish   cast128   twofish128   twofish192   twofish256   MD5   SHA1   RSA   DSA] [enable   disable]</b>
Description	This command allows you to configure the desired type of SSH algorithm used for authentication encryption.
Parameters	<i>3DES</i> – This parameter will enable or disable the Triple_Data Encryption

**config ssh algorithm**

Standard encryption algorithm.

*AES128* - This parameter will enable or disable the Advanced Encryption Standard AES128 encryption algorithm.

*AES192* - This parameter will enable or disable the Advanced Encryption Standard AES192 encryption algorithm.

*AES256* - This parameter will enable or disable the Advanced Encryption Standard AES256 encryption algorithm.

*arcfour* - This parameter will enable or disable the Arcfour encryption algorithm.

*blowfish* - This parameter will enable or disable the Blowfish encryption algorithm.

*cast128* - This parameter will enable or disable the Cast128 encryption algorithm.

*twofish128* - This parameter will enable or disable the twofish128 encryption algorithm.

*twofish192* - This parameter will enable or disable the twofish192 encryption algorithm.

*MD5* - This parameter will enable or disable the MD5 Message Digest encryption algorithm.

*SHA1* - This parameter will enable or disable the Secure Hash Algorithm encryption.

*RSA* - This parameter will enable or disable the RSA encryption algorithm.

*DSA* - This parameter will enable or disable the Digital Signature Algorithm encryption.

*[enable | disable]* – This allows users to enable or disable algorithms entered in this command, on the Switch.

Restrictions

User Account Command Level – Administrator and Operator

Usage example:

To configure SSH algorithm:

```
DES-3800:admin# config ssh algorithm Blowfish enable
Command: config ssh algorithm Blowfish enable

Success.

DES-3800:admin#
```

**show ssh algorithm**

Purpose	Used to display the SSH algorithm setting.
Syntax	<b>show ssh algorithm</b>
Description	This command will display the current SSH algorithm setting status.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To display SSH algorithms currently set on the Switch:

```
DES-3800:admin#show ssh algorithm
```

```
Command: show ssh algorithm
```

**Encryption Algorithm:**

```
3DES           :Enabled
AES128         :Enabled
AES192         :Enabled
AES256         :Enabled
arcfour        :Enabled
blowfish       :Enabled
cast128        :Enabled
twofish128     :Enabled
twofish192     :Enabled
twofish256     :Enabled
```

**Data Integrity Algorithm:**

```
MD5           :Enabled
SHA1          :Enabled
```

**Public Key Algorithm:**

```
RSA           :Enabled
DSA           :Enabled
```

```
DES-3800:admin#
```

## config ssh regenerate hostkey

Purpose	Used to regenerate the host key for the SSH algorithm setting.
Syntax	<b>config ssh regenerate hostkey</b>
Description	This command will regenerate the host key for the SSH algorithm setting.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Usage example:

To regenerate the SSH hostkey:

```
DES-3800:admin# config ssh regenerate hostkey
```

```
Command: config ssh regenerate hostkey
```

```
Success.
```

```
DES-3800:admin#
```

## SSL COMMANDS

*Secure Sockets Layer* or *SSL* is a security feature that will provide a secure communication path between a host and client through the use of authentication, digital signatures and encryption. These security functions are implemented through the use of a *ciphersuite*, which is a security string that determines the exact cryptographic parameters, specific encryption algorithms and key sizes to be used for an authentication session and consists of three levels:

1. **Key Exchange:** The first part of the cyphersuite string specifies the public key algorithm to be used. This Switch utilizes the Rivest Shamir Adleman (RSA) public key algorithm and the Digital Signature Algorithm (DSA), specified here as the *DHE\_DSS* Diffie-Hellman (DHE) public key algorithm. This is the first authentication process between client and host as they “exchange keys” in looking for a match and therefore authentication to be accepted to negotiate encryptions on the following level.
2. **Encryption:** The second part of the ciphersuite that includes the encryption used for encrypting the messages sent between client and host. The Switch supports two types of cryptology algorithms:
  - Stream Ciphers – There are two types of stream ciphers on the Switch, *RC4 with 40-bit keys* and *RC4 with 128-bit keys*. These keys are used to encrypt messages and need to be consistent between client and host for optimal use.
  - CBC Block Ciphers – CBC refers to Cipher Block Chaining, which means that a portion of the previously encrypted block of encrypted text is used in the encryption of the current block. The Switch supports the *3DES\_EDE* encryption code defined by the Data Encryption Standard (DES) to create the encrypted text.
3. **Hash Algorithm:** This part of the ciphersuite allows the user to choose a message digest function which will determine a Message Authentication Code. This Message Authentication Code will be encrypted with a sent message to provide integrity and prevent against replay attacks. The Switch supports two hash algorithms, *MD5* (Message Digest 5) and *SHA* (Secure Hash Algorithm).

These three parameters are uniquely assembled in four choices on the Switch to create a three layered encryption code for secure communication between the server and the host. The user may implement any one or combination of the ciphersuites available, yet different ciphersuites will affect the security level and the performance of the secured connection. The information included in the ciphersuites is not included with the Switch and requires downloading from a third source in a file form called a *certificate*. This function of the Switch cannot be executed without the presence and implementation of the certificate file and can be downloaded to the Switch by utilizing a TFTP server. The Switch supports SSLv3 and TLSv1. Other versions of SSL may not be compatible with this Switch and may cause problems upon authentication and transfer of messages from client to host.

Command	Parameters
enable ssl	{ciphersuite {RSA_with_RC4_128_MD5   RSA_with_3DES_EDE_CBC_SHA   DHE_DSS_with_3DES_EDE_CBC_SHA   RSA_EXPORT_with_RC4_40_MD5}}
disable ssl	{ciphersuite {RSA_with_RC4_128_MD5   RSA_with_3DES_EDE_CBC_SHA   DHE_DSS_with_3DES_EDE_CBC_SHA   RSA_EXPORT_with_RC4_40_MD5}}
config ssl cachetimeout timeout	<value 60-86400>
show ssl	
show ssl certificate	
show ssl cachetimeout	
download certificate_fromTFTP	<ipaddr> certfilename <path_filename 64> keyfilename <path_filename 64>

Each command is listed, in detail, in the following sections.

enable ssl	
Purpose	To enable the SSL function on the Switch.
Syntax	<b>enable ssl {ciphersuite {RSA_with_RC4_128_MD5   RSA_with_3DES_EDE_CBC_SHA   DHE_DSS_with_3DES_EDE_CBC_SHA   RSA_EXPORT_with_RC4_40_MD5}}</b>
Description	This command will enable SSL on the Switch by implementing any

**enable ssl**

	one or combination of listed ciphersuites on the Switch. Entering this command without a parameter will enable the SSL status on the Switch. Enabling SSL will disable the web-manager on the Switch.
Parameters	<p><i>ciphersuite</i> - A security string that determines the exact cryptographic parameters, specific encryption algorithms and key sizes to be used for an authentication session. The user may choose any combination of the following:</p> <ul style="list-style-type: none"> <li>• <i>RSA_with_RC4_128_MD5</i> – This ciphersuite combines the RSA key exchange, stream cipher RC4 encryption with 128-bit keys and the MD5 Hash Algorithm.</li> <li>• <i>RSA_with_3DES_EDE_CBC_SHA</i> - This ciphersuite combines the RSA key exchange, CBC Block Cipher 3DES_EDE encryption and the SHA Hash Algorithm.</li> <li>• <i>DHE_DSS_with_3DES_EDE_CBC_SHA</i> - This ciphersuite combines the DSA Diffie Hellman key exchange, CBC Block Cipher 3DES_EDE encryption and SHA Hash Algorithm.</li> <li>• <i>RSA_EXPORT_with_RC4_40_MD5</i> - This ciphersuite combines the RSA Export key exchange, stream cipher RC4 encryption with 40-bit keys.</li> </ul> <p>The ciphersuites are enabled by default on the Switch, yet the SSL status is disabled by default. Enabling SSL with a ciphersuite will not enable the SSL status on the Switch.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable SSL on the Switch for all ciphersuites:

```
DES-3800:admin#enable ssl
```

```
Command:enable ssl
```

**Note:** Web will be disabled if SSL is enabled.

**Success.**

```
DES-3800:admin#
```

**NOTE:** Enabling SSL on the Switch will enable all ciphersuites. To utilize a particular ciphersuite, the user must eliminate other ciphersuites by using the **disable ssl** command along with the appropriate ciphersuites.

**NOTE:** Enabling the SSL function on the Switch will disable the port for the web manager (port 80). To log on to the web based manager, the entry of your URL must begin with *https://*. (ex. *https://10.90.90.90*)

**NOTE:** When the Web-based Access Control (WAC) feature is enabled on the Switch, SSL cannot be enabled.

## disable ssl

Purpose	To disable the SSL function on the Switch.
Syntax	<b>disable ssl {ciphersuite {RSA_with_RC4_128_MD5   RSA_with_3DES_EDE_CBC_SHA   DHE_DSS_with_3DES_EDE_CBC_SHA   RSA_EXPORT_with_RC4_40_MD5}}</b>
Description	This command will disable SSL on the Switch and can be used to disable any one or combination of listed ciphersuites on the Switch.
Parameters	<p><i>ciphersuite</i> - A security string that determines the exact cryptographic parameters, specific encryption algorithms and key sizes to be used for an authentication session. The user may choose any combination of the following:</p> <ul style="list-style-type: none"> <li>• <i>RSA_with_RC4_128_MD5</i> – This ciphersuite combines the RSA key exchange, stream cipher RC4 encryption with 128-bit keys and the MD5 Hash Algorithm.</li> <li>• <i>RSA_with_3DES_EDE_CBC_SHA</i> - This ciphersuite combines the RSA key exchange, CBC Block Cipher 3DES_EDE encryption and the SHA Hash Algorithm.</li> <li>• <i>DHE_DSS_with_3DES_EDE_CBC_SHA</i> - This ciphersuite combines the DSA Diffie Hellman key exchange, CBC Block Cipher 3DES_EDE encryption and SHA Hash Algorithm.</li> <li>• <i>RSA_EXPORT_with_RC4_40_MD5</i> - This ciphersuite combines the RSA Export key exchange, stream cipher RC4 encryption with 40-bit keys.</li> </ul>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To disable the SSL status on the Switch:

```
DES-3800:admin#disable ssl
```

```
Command: disable ssl
```

```
Success.
```

```
DES-3800:admin#
```

To disable ciphersuite *RSA\_EXPORT\_with\_RC4\_40\_MD5* only:

```
DES-3800:admin#disable ssl ciphersuite
```

```
RSA_EXPORT_with_RC4_40_MD5
```

```
Command: disable ssl ciphersuite RSA_EXPORT_with_RC4_40_MD5
```

```
Success.
```

```
DES-3800:admin#
```

## config ssl cachetimeout timeout

Purpose	Used to configure the SSL cache timeout.
Syntax	<b>config ssl cachetimeout timeout &lt;value 60-86400&gt;</b>
Description	This command will set the time between a new key exchange between a client and a host using the SSL function. A new SSL session is established every time the client and host go through a key exchange. Specifying a

**config ssl cachetimeout timeout**

	longer timeout will allow the SSL session to reuse the master key on future connections with that particular host, therefore speeding up the negotiation process.
Parameters	<i>timeout &lt;value 60-86400&gt;</i> - Enter a timeout value between 60 and 86400 seconds to specify the total time an SSL key exchange ID stays valid before the SSL module will require a new, full SSL negotiation for connection. The default cache timeout is 600 seconds
Restrictions	User Account Command Level – All

Example usage:

To set the SSL cachetimeout for 7200 seconds:

```
DES-3800:admin#config ssl cachetimeout timeout 7200
Command: config ssl cachetimeout timeout 7200

Success.

DES-3800:admin#
```

**show ssl cachetimeout**

Purpose	Used to show the SSL cache timeout.
Syntax	<b>show ssl cachetimeout</b>
Description	Entering this command will allow the user to view the SSL cache timeout currently implemented on the Switch.
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To view the SSL cache timeout on the Switch:

```
DES-3800:admin#show ssl cachetimeout
Command: show ssl cachetimeout

Cache timeout is 600 second(s).

DES-3800:admin#
```

**show ssl**

Purpose	Used to view the SSL status and the certificate file status on the Switch.
Syntax	<b>show ssl</b>
Description	This command is used to view the SSL status on the Switch.
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To view the SSL status on the Switch:

```
DES-3800:admin#show ssl
Command: show ssl
```

SSL Status		Disabled
RSA_WITH_RC4_128_MD5	0x0004	Enabled
RSA_WITH_3DES_EDE_CBC_SHA	0x000A	Enabled
DHE_DSS_WITH_3DES_EDE_CBC_SHA	0x0013	Enabled
RSA_EXPORT_WITH_RC4_40_MD5	0x0003	Enabled

```
DES-3800:admin#
```

## show ssl certificate

Purpose	Used to view the SSL certificate file status on the Switch.
Syntax	<b>show ssl certificate</b>
Description	This command is used to view the SSL certificate file information currently implemented on the Switch.
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To view certificate file information on the Switch:

```
DES-3800:admin# show ssl certificate
Command: show ssl certificate
```

```
Loaded with RSA Certificate!
```

```
DES-3800:admin#
```

## download certificate\_fromTFTP

Purpose	Used to download a certificate file for the SSL function on the Switch.
Syntax	<b>download certificate_fromTFTP &lt;ipaddr&gt; certfilename &lt;path_filename 64&gt; keyfilename &lt;path_filename 64&gt;</b>
Description	This command is used to download a certificate file for the SSL function on the Switch from a TFTP server. The certificate file is a data record used for authenticating devices on the network. It contains information on the owner, keys for authentication and digital signatures. Both the server and the client must have consistent certificate files for optimal use of the SSL function. The Switch only supports certificate files with .der file extensions.
Parameters	<p><i>&lt;ipaddr&gt;</i> - Enter the IP address of the TFTP server.</p> <p><i>certfilename &lt;path_filename 64&gt;</i> - Enter the path and the filename of the certificate file you wish to download.</p> <p><i>keyfilename &lt;path_filename 64&gt;</i> - Enter the path and the filename of the key exchange file you wish to download.</p>
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To download a certificate file and key file to the Switch:

```
DES-3800:admin# DES-3800:admin#download certificate_fromTFTP  
10.53.13.94 certfilename c:/cert.der keyfilename c:/pkey.der
```

```
Command: download certificate_fromTFTP 10.53.13.94 certfilename  
c:/cert.der keyfilename c:/pkey.der
```

```
Certificate Loaded Successfully!
```

```
DES-3800:admin#
```

## JUMBO FRAME COMMANDS

Certain switches can support jumbo frames (frames larger than the standard Ethernet frame size of 1536 bytes). To transmit frames of up to 9K (and 9220 bytes tagged), the user can increase the maximum transmission unit (MTU) size from the default of 1536 by enabling the Jumbo Frame command.

The jumbo frame commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
enable jumbo_frame	
disable jumbo_frame	
show jumbo_frame	

Each command is listed, in detail, in the following sections.

### enable jumbo\_frame

Purpose	Used to enable the jumbo frame function on the Switch.
Syntax	<b>enable jumbo_frame</b>
Description	This command will allow ethernet frames larger than 1536 bytes to be processed by the Switch. The maximum size of the jumbo frame may not exceed 9220 bytes.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable the jumbo frame function on the Switch:

```
DES-3800:admin#enable jumbo_frame
Command: enable jumbo_frame

Success.

DES-3800:admin#
```

### disable jumbo\_frame

Purpose	Used to disable the jumbo frame function on the Switch.
Syntax	<b>disable jumbo_frame</b>
Description	This command will disable the jumbo frame function on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Example usage:

To enable the jumbo frame function on the Switch:

```
DES-3800:admin#disable jumbo_frame
Command: disable jumbo_frame

Success.

DES-3800:admin#
```

## show jumbo\_frame

Purpose	Used to show the status of the jumbo frame function on the Switch.
Syntax	<b>show jumbo_frame</b>
Description	This command will show the status of the jumbo frame function on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator and Operator

Usage Example:

To show the jumbo frame status currently configured on the Switch:

```
DES-3800:admin#show jumbo_frame
Command: show jumbo_frame

Off.

DES-3800:admin#
```

## D-LINK SINGLE IP MANAGEMENT COMMANDS

Simply put, D-Link Single IP Management is a concept that will stack switches together over Ethernet instead of using stacking ports or modules. Switches using D-Link Single IP Management (labeled here as SIM) must conform to the following rules:

- SIM is an optional feature on the Switch and can easily be enabled or disabled. SIM grouping has no effect on the normal operation of the Switch in the user's network.
- There are three classifications for switches using SIM. The Commander Switch(CS), which is the master switch of the group, Member Switch(MS), which is a switch that is recognized by the CS as a member of a SIM group, and a Candidate Switch(CaS), which is a switch that has a physical link to the SIM group but has not been recognized by the CS as a member of the SIM group.
- A SIM group can only have one Commander Switch(CS).
- All switches in a particular SIM group must be in the same IP subnet (broadcast domain). Members of a SIM group cannot cross a router.
- A SIM group accepts up to 33 switches (numbered 0-32), including the Commander Switch (numbered 0).
- There is no limit to the number of SIM groups in the same IP subnet (broadcast domain), however a single switch can only belong to one group.
- If multiple VLANs are configured, the SIM group will only utilize the System VLAN on any switch.
- SIM allows intermediate devices that do not support SIM. This enables the user to manage a switch that are more than one hop away from the CS.

The SIM group is a group of switches that are managed as a single entity. The DES-3800 Series may take on three different roles:

**Commander Switch (CS)** – This is a switch that has been manually configured as the controlling device for a group, and takes on the following characteristics:

- It has an IP Address.
- It is not a Commander Switch or Member Switch of another Single IP group.
- It is connected to the Member Switches through its management VLAN.

**Member Switch (MS)** – This is a switch that has joined a single IP group and is accessible from the CS, and it takes on the following characteristics:

- It is not a CS or MS of another IP group.
- It is connected to the CS through the CS management VLAN.

**Candidate Switch (CaS)** – This is a switch that is ready to join a SIM group but is not yet a member of the SIM group. The Candidate Switch may join the SIM group through an automatic function of the xStack DES-3800 switch series, or by manually configuring it to be a MS of a SIM group. A switch configured as a CaS is not a member of a SIM group and will take on the following characteristics:

- It is not a CS or MS of another Single IP group.
- It is connected to the CS through the CS management VLAN.

The following rules also apply to the above roles:

1. Each device begins in the Candidate state.
2. CS's must change their role to CaS and then to MS, to become a MS of a SIM group. Thus the CS cannot directly be converted to a MS.
3. The user can manually configure a CS to become a CaS.
4. A MS can become a CaS by:
  - a. Being configured as a CaS through the CS.
  - b. If report packets from the CS to the MS time out.
5. The user can manually configure a CaS to become a CS
6. The CaS can be configured through the CS to become a MS.

After configuring one switch to operate as the CS of a SIM group, additional xStack DES-3800 series switches may join the group by either an automatic method or by manually configuring the Switch to be a MS. The CS will then serve as the in band entry point for access to the MS. The CS's IP address will become the path to all MS's of the group and the CS's Administrator's password, and/or authentication will control access to all MS's of the SIM group.

With SIM enabled, the applications in the CS will redirect the packet instead of executing the packets. The applications will decode the packet from the administrator, modify some data, then send it to the MS. After execution, the CS may receive a response packet from the MS, which it will encode and send back to the administrator.

When a CS becomes a MS, it automatically becomes a member of the first SNMP community (include read/write and read only) to which the CS belongs. However if a MS has its own IP address, it can belong to SNMP communities to which other switches in the group, including the CS, do not belong.

### The Upgrade to v1.6

To better improve SIM management, the xStack DES-3800 series switches have been upgraded to version 1.6 in this release. Many improvements have been made, including:

The Commander Switch (CS) now has the capability to automatically rediscover member switches that have left the SIM group, either through a reboot or web malfunction. This feature is accomplished through the use of Discover packets and Maintain packets that previously set SIM members will emit after a reboot. Once a MS has had its MAC address and password saved to the CS's database, if a reboot occurs in the MS, the CS will keep this MS information in its database and when a MS has been rediscovered, it will add the MS back into the SIM tree automatically. No configuration will be necessary to rediscover these switches. There are some instances where pre-saved MS switches cannot be rediscovered. For example, if the Switch is still powered down, if it has become the member of another group, or if it has been configured to be a Commander Switch, the rediscovery process cannot occur.

This version will support multiple switch upload and downloads for firmware, configuration files and log files, as follows:

- Firmware – The switch now supports multiple MS firmware downloads from a TFTP server.
- Configuration Files – This switch now supports multiple downloading and uploading of configuration files both to (for configuration restoration) and from (for configuration backup) MS's, using a TFTP server..
- Log – The switch now supports uploading multiple MS log files to a TFTP server.

**NOTE:** For more details regarding improvements made in SIMv1.6, please refer to the Single IP Management White Paper located on the D-Link website.

The SIM commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
enable sim	
disable sim	
show sim	{[candidates {<candidate_id 1-100>}   members {<member_id 1-32>}   group {commander_mac <macaddr>}   neighbor]}
reconfig	[member_id <value 1-32>   exit]
config sim_group	[add <candidate_id 1-100> {<password>}   delete <member_id 1-32>]
config sim	[[commander {group_name <groupname 64>}   candidate]   dp_interval <sec 30-90>   hold_time <sec 100-255>]
download sim_ms	[firmware_from_tftp   configuration_from_tftp] <ipaddr> <path_filename> {[members <mslist 1-32>   all]}
upload sim_ms	[configuration_to_tftp   log_to_tftp] <ipaddr> <path_filename> {[members <mslist>   all]}

Each command is listed, in detail, in the following sections.

enable sim	
Purpose	Used to enable Single IP Management (SIM) on the Switch
Syntax	<b>enable sim</b>
Description	This command will enable SIM globally on the Switch. SIM features

**enable sim**

	and functions will not function properly unless this function is enabled.
Parameters	None.
Restrictions	User Account Command Level – Administrator only

Example usage:

To enable SIM on the Switch:

```
DES-3800:admin#enable sim
Command: enable sim

Success.

DES-3800:admin#
```

**disable sim**

Purpose	Used to disable Single IP Management (SIM) on the Switch.
Syntax	<b>disable sim</b>
Description	This command will disable SIM globally on the Switch.
Parameters	None.
Restrictions	User Account Command Level – Administrator only

Example usage:

To disable SIM on the Switch:

```
DES-3800:admin#disable sim
Command: disable sim

Success.

DES-3800:admin#
```

**show sim**

Purpose	Used to view the current information regarding the SIM group on the Switch.
Syntax	<b>show sim {[candidates {&lt;candidate_id 1-100&gt;}   members {&lt;member_id 1-32&gt;}   group {commander_mac &lt;macaddr&gt;}   neighbor}]}</b>
Description	<p>This command will display the current information regarding the SIM group on the Switch, including the following:</p> <p>SIM Version - Displays the current Single IP Management version on the Switch.</p> <p>Firmware Version - Displays the current Firmware version on the Switch.</p> <p>Device Name - Displays the user-defined device name on the Switch.</p> <p>MAC Address - Displays the MAC Address of the Switch.</p> <p>Capabilities – Displays the type of switch, be it Layer 2 (L2) or Layer 3 (L3).</p>

## show sim

	Platform – Switch Description including name and model number.
	SIM State –Displays the current Single IP Management State of the Switch, whether it be enabled or disabled.
	Role State – Displays the current role the Switch is taking, including Commander, Member or Candidate. A Stand-alone switch will always have the commander role.
	Discovery Interval - Time in seconds the Switch will send discovery packets out over the network.
	Hold time – Displays the time in seconds the Switch will hold discovery results before dropping it or utilizing it.
Parameters	<p><i>candidates &lt;candidate_id 1-100&gt;</i> - Entering this parameter will display information concerning candidates of the SIM group. To view a specific candidate, include that candidate's ID number, listed from 1 to 100.</p> <p><i>members &lt;member_id 1-32&gt;</i> - Entering this parameter will display information concerning members of the SIM group. To view a specific member, include that member's id number, listed from 1 to 32.</p> <p><i>group {commander_mac &lt;macaddr&gt;}</i> - Entering this parameter will display information concerning the SIM group. To view a specific group, include the commander's MAC address of the group.</p> <p><i>neighbor</i> – Entering this parameter will display neighboring devices of the Switch. A SIM neighbor is defined as a switch that is physically connected to the Switch but is not part of the SIM group. This screen will produce the following results:</p> <ul style="list-style-type: none"> <li>• Port – Displays the physical port number of the commander switch where the uplink to the neighbor switch is located.</li> <li>• MAC Address – Displays the MAC Address of the neighbor switch.</li> <li>• Role – Displays the role(CS, CaS, MS) of the neighbor switch.</li> </ul>
Restrictions	User Account Command Level – All

Example usage:

To show the SIM information in detail:

```
DES-3800:admin#show sim
Command: show sim

Group Name       : default
SIM Version      : VER-1.61
Firmware Version : 3.00.B15
Device Name      :
MAC Address      : 00-10-20-33-45-00
Capabilities     : L3
Platform         : DES-3828 L3 Switch
SIM State        : Disabled
Role State       : Candidate
Discovery Interval : 30 sec
Holdtime         : 100 sec

DES-3800:admin#
```

To show the candidate information in summary, if the candidate ID is specified:

DES-3800:admin#show sim candidates 2

Command: show sim candidates 2

ID	MAC Address	Platform / Capability	Hold Time	Firmware Version	Device Name
2	00-55-55-00-55-00	DES-3828 L3 Switch	140	3.00-B15	default master

Total Entries: 2

DES-3800:admin#

To show the member information in summary, if the member ID is specified:

DES-3800:admin#show sim member 1

Command: show sim member 1

ID	MAC Address	Platform / Capability	Hold Time	Firmware Version	Device Name
1	00-01-02-03-04-00	DES-3828 L3 Switch	40	3.00-B15	The Man

Total Entries: 2

DES-3800:admin#

To show other groups information in summary:

DES-3800:admin#show sim group

Command: show sim group

SIM Group Name : default

ID	MAC Address	Platform / Capability	Hold Time	Firmware Version	Device Name
*1	00-01-02-03-04-00	DES-3828 L3 Switch	40	3.00-B15	Trinity
2	00-55-55-00-55-00	DES-3828 L3 Switch	140	3.00-B15	default master

SIM Group Name : SIM2

ID	MAC Address	Platform / Capability	Hold Time	Firmware Version	Device Name
*1	00-01-02-03-04-00	DES-3828 L3 Switch	40	3.00-B15	Neo
2	00-55-55-00-55-00	DES-3828 L3 Switch	140	3.00-B15	default master

‘\*\*’ means commander switch.

DES-3800:admin#

Example usage:

To view SIM neighbors:

```
DES-3800:admin#show sim neighbor
```

```
Command: show sim neighbor
```

#### Neighbor Info Table

Port	MAC Address	Role
23	00-35-26-00-11-99	Commander
23	00-35-26-00-11-91	Member
24	00-35-26-00-11-90	Candidate

```
Total Entries: 3
```

```
DES-3800:admin#
```

## reconfig

Purpose	Used to connect to a member switch, through the commander switch, using telnet.
Syntax	<b>reconfig [member_id &lt;value 1-32   exit]</b>
Description	This command is used to reconnect to a member switch using telnet.
Parameters	<i>member_id</i> <value 1-32> - Select the ID number of the member switch the user desires to configure. <i>exit</i> – This command is used to exit from managing the member switch and will return to managing the commander switch.
Restrictions	User Account Command Level – Administrator only

Example usage:

To connect to the MS, with member ID 2, through the CS, using the command line interface:

```
DES-3800:admin#reconfig member_id 2
```

```
Command: reconfig member_id 2
```

```
DES-3800:admin#
```

```
Login:
```

## config sim\_group

Purpose	Used to add candidates and delete members from the SIM group.
Syntax	<b>config sim_group [add &lt;candidate_id 1-100&gt; {&lt;password&gt;}   delete &lt;member_id 1-32&gt;]</b>
Description	This command is used to add candidates and delete members from the SIM group by ID number.
Parameters	<i>add</i> <candidate_id 1-100> <password> - Use this parameter to change a candidate switch (CaS) to a member switch (MS) of a SIM group. The CaS may be defined by its ID number and a password (if necessary). <i>delete</i> <member_id 1-32> - Use this parameter to delete a member switch of a SIM group. The member switch should be defined by ID number.
Restrictions	User Account Command Level – Administrator only

Example usage:

To add a member:

```
DES-3800:admin#config sim_group add 2
```

```
Command: config sim_group add 2
```

```
Please wait for ACK!!!
SIM Config Success !!!
```

```
Success.
```

```
DES-3800:admin#
```

To delete a member:

```
DES-3800:admin#config sim_group delete 1
```

```
Command: config sim_group delete 1
```

```
Please wait for ACK!!!
SIM Config Success!!!
```

```
Success.
```

```
DES-3800:admin#
```

## config sim

Purpose	Used to configure role parameters for the SIM protocol on the Switch.
Syntax	<b>config sim [[commander {group_name &lt;groupname 64&gt;}   candidate]   dp_interval &lt;sec 30-90&gt;   hold_time &lt;sec 100-255&gt;]</b>
Description	This command is used to configure parameters of switches of the SIM.
Parameters	<p><i>commander</i> – Use this parameter to configure the commander switch(CS) for the following parameters:</p> <ul style="list-style-type: none"> <li>▪ <i>group_name &lt;groupname 64&gt;</i> - Used to update the name of the group. Enter an alphanumeric string of up to 64 characters to rename the SIM group.</li> <li>▪ <i>dp_interval &lt;30-90&gt;</i> – The user may set the discovery protocol interval, in seconds that the Switch will send out discovery packets. Returning information to the CS will include information about other switches connected to it. (Ex. MS, CaS). The user may set the <i>dp_interval</i> from 30 to 90 seconds.</li> <li>▪ <i>hold time &lt;sec 100-255&gt;</i> – Using this parameter, the user may set the time, in seconds, the CS will hold information sent to it from other switches, utilizing the discovery interval protocol. The user may set the hold time from 100 to 255 seconds.</li> </ul> <p><i>candidate</i> – Used to change the role of a CS (commander) to a CaS (candidate).</p> <ul style="list-style-type: none"> <li>▪ <i>dp_interval &lt;30-90&gt;</i> – The user may set the discovery protocol interval, in seconds that the Switch will send out discovery packets. Returning information to the CS will include information about other switches connected to it. (Ex. MS, CaS). The user may set the <i>dp_interval</i> from 30 to 90 seconds.</li> <li>▪ <i>hold time &lt;100-255&gt;</i> – Using this parameter, the user may set the time, in seconds, the Switch will hold information sent to it from other switches, utilizing the discovery interval</li> </ul>

## config sim

	protocol. The user may set the hold time from 100 to 255 seconds.
Restrictions	User Account Command Level – Administrator only

To change the time interval of the discovery protocol:

```
DES-3800:admin# config sim commander dp_interval 40
Command: config sim commander dp_interval 40

Success.

DES-3800:admin#
```

To change the hold time of the discovery protocol:

```
DES-3800:admin# config sim hold_time 120
Command: config sim hold_time 120

Success.

DES-3800:admin#
```

To transfer the CS (commander) to be a CaS (candidate):

```
DES-3800:admin# config sim candidate
Command: config sim candidate

Success.

DES-3800:admin#
```

To transfer the Switch to be a CS:

```
DES-3800:admin# config sim commander
Command: config sim commander

Success.

DES-3800:admin#
```

To update the name of a group:

```
DES-3800:admin# config sim commander group_name Trinity
Command: config sim commander group_name Trinity

Success.

DES-3800:admin#
```

## download sim\_ms

Purpose	Used to download firmware or configuration file to an indicated device.
Syntax	<b>download sim [firmware_from_tftp   configuration_from_tftp] &lt;ipaddr&gt; &lt;path_filename&gt; {[members &lt;mslist 1-32&gt;   all]}</b>
Description	This command will download a firmware file or configuration file to a specified device from a TFTP server.

## download sim\_ms

Parameters	<p><i>firmware_from_tftp</i> – Specify this parameter to download firmware to members of a SIM group.</p> <p><i>configuration_from_tftp</i> - Specify this parameter to download a switch configuration to members of a SIM group.</p> <p><i>&lt;ipaddr&gt;</i> – Enter the IP address of the TFTP server.</p> <p><i>&lt;path_filename&gt;</i> – Enter the path and the filename of the firmware or switch on the TFTP server.</p> <p><i>members</i> – Enter this parameter to specify the members the user prefers to download firmware or switch configuration files to. The user may specify a member or members by adding one of the following:</p> <ul style="list-style-type: none"> <li>▪ <i>&lt;mslist 1-32&gt;</i> - Enter a value, or values to specify which members of the SIM group will receive the firmware or switch configuration.</li> <li>▪ <i>all</i> – Add this parameter to specify all members of the SIM group will receive the firmware or switch configuration.</li> </ul>
Restrictions	User Account Command Level – Administrator only

Example usage:

To download firmware:

```
DES-3800:admin# download sim_ms firmware_from_tftp 10.53.13.94 c:/des3828.had all
Command: download sim_ms firmware_from_tftp 10.53.13.94 c:/des3828.had all

This device is updating firmware. Please wait...

Download Status :
```

ID	MAC Address	Result
1	00-01-02-03-04-00	Success
2	00-07-06-05-04-03	Success
3	00-07-06-05-04-03	Success

```
DES-3800:admin#
```

To download configuration files:

```
DES-3800:admin# download sim configuration_from_tftp 10.53.13.94 c:/des3828.txt all
Command: download sim configuration_from_tftp 10.53.13.94 c:/des3828.txt all

This device is updating configuration. Please wait...

Download Status :
```

ID	MAC Address	Result
1	00-01-02-03-04-00	Success
2	00-07-06-05-04-03	Success

```
DES-3800:admin#
```

**upload sim\_ms**

Purpose	User to upload a configuration file to a TFTP server from a specified member of a SIM group.
Syntax	<b>upload sim_ms [configuration_to_tftp   log_to_tftp] &lt;ipaddr&gt; &lt;path_filename&gt; {[members &lt;mslist&gt;   all]}</b>
Description	This command will upload a configuration file to a TFTP server from a specified member of a SIM group.
Parameters	<p><i>configuration_to_tftp</i> - Specify this parameter if the user wishes to upload a switch configuration to members of a SIM group.</p> <p><i>log_to_tftp</i> - Specify this parameter to download a switch log to members of a SIM group.</p> <p><i>&lt;ipaddr&gt;</i> - Enter the IP address of the TFTP server to upload a configuration file to.</p> <p><i>&lt;path_filename&gt;</i> - Enter a user-defined path and file name on the TFTP server to which to upload configuration files.</p> <p><i>members</i> - Enter this parameter to specify the members the user prefers to upload switch configuration or log files to. The user may specify a member or members by adding one of the following:</p> <ul style="list-style-type: none"> <li>▪ <i>&lt;mslist&gt;</i> - Enter a value, or values to specify which members of the SIM group will receive the switch configuration or log files.</li> <li>▪ <i>all</i> - Add this parameter to specify all members of the SIM group will receive the switch configuration or log files.</li> </ul>
Restrictions	Only administrator-level users can issue this command.

Example usage:

To upload configuration files to a TFTP server:

```
DES-3800:admin# upload sim_ms configuration 10.55.47.1
D:\configuration.txt 1
Command: upload sim_ms configuration 10.55.47.1
D:\configuration.txt 1

Success.

DES-3800:admin#
```

## COMMAND HISTORY LIST

The switch history commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
?	{<command>}
dir	
config command_history	<value 1-40>
show command_history	

Each command is listed, in detail, in the following sections.

?	
Purpose	Used to display all commands in the Command Line Interface (CLI).
Syntax	<b>? {&lt;command&gt;}</b>
Description	This command will display all of the commands available through the Command Line Interface (CLI).
Parameters	{<command>} – Entering the question mark with an appropriate command will list all the corresponding parameters for the specified command, along with a brief description of the commands function and similar commands having the same words in the command.
Restrictions	User Account Command Level – All

Example usage:

To display all of the commands in the CLI:

```
DES-3800:admin#?
..
?
clear
clear arptable
clear counters
clear fdb
clear log
clear port_security_entry port
config 802.1p default_priority
config 802.1p user_priority
config 802.1x auth_mode
config 802.1x auth_parameter ports
config 802.1x capability ports
config 802.1x guest_vlan
config 802.1x guest_vlan ports
config 802.1x init
config 802.1x reauth
config access_profile profile_id
config account
config address_binding ip_mac ipaddress
config address_binding ip_mac ports
config admin local_enable
CTRL+C ESC q Quit SPACE n Next Page ENTER Next Entry a All
```

To display the parameters for a specific command:

```
DES-3800:admin#? config stp
Command:? config stp

Command: config stp
Usage: {maxage <value 6-40> | maxhops <value1-20> | hellotime <value 1-10> | forwarddelay <value 4-30> | txholdcount <value 1-10> | fbpdudisable | lbd [enable | disable] | lbd_recover_timer [0 | <value 60-1000000>]}
Description: Used to update the STP Global Configuration.
config stp instance_id
config stp mst_config_id
config stp mst_ports
config stp ports
config stp priority
config stp version

DES-3800:admin#
```

## dir

Purpose	Used to display all commands in the Command Line Interface (CLI).
Syntax	<b>dir</b>
Description	This command will display all of the commands available through the Command Line Interface (CLI).
Parameters	None.
Restrictions	User Account Command Level – All

Example usage:

To display all commands:

```
DES-3800:admin#dir
..
?
clear
clear arptable
clear counters
clear fdb
clear log
clear port_security_entry port
config 802.1p default_priority
config 802.1p user_priority
config 802.1x auth_mode
config 802.1x auth_parameter ports
config 802.1x capability ports
config 802.1x guest_vlan
config 802.1x guest_vlan ports
config 802.1x init
config 802.1x reauth
config access_profile profile_id
config account
config address_binding ip_mac ipaddress
config address_binding ip_mac ports
config admin local_enable
CTRL+C ESC q Quit SPACE n Next Page ENTER Next Entry a All
```

## config command\_history

Purpose	Used to configure the command history.
Syntax	<b>config command_history &lt;value 1-40&gt;</b>
Description	This command is used to configure the command history.
Parameters	<value 1-40> – The number of previously executed commands maintained in the buffer. Up to 40 of the latest executed commands may be viewed.
Restrictions	User Account Command Level – Administrator only

### Example usage

To configure the command history:

```
DES-3800:admin#config command_history 20
Command: config command_history 20

Success.

DES-3800:admin#
```

## show command\_history

Purpose	Used to display the command history.
Syntax	<b>show command_history</b>
Description	This command will display the command history.
Parameters	None.
Restrictions	User Account Command Level – All

### Example usage

To display the command history:

```
DES-3800:admin#show command_history
Command: show command_history

?
? show
show vlan
show command history

DES-3800:admin#
```

## PoE COMMANDS

DES-3828P supports Power over Ethernet (PoE) as defined by the IEEE 802.3af specification. Ports 1-24 supply 48 VDC power to PDs over Category 5 or Category 3 UTP Ethernet cables. DES-3828P follows the standard PSE pinout *Alternative A*, whereby power is sent out over pins 1, 2, 3 and 6. DES-3828P works with all D-Link 802.3af capable devices.

DES-3828P includes the following PoE features:

- The auto-discovery feature recognizes the connection of a PD (Powered Device) and automatically sends power to it.
- The auto-disable feature will occur under two conditions: first, if the total power consumption exceeds the system power limit; and second, if the per port power consumption exceeds the per port power limit.
- The active circuit protection feature automatically disables the port if there is a short. Other ports will remain active.

PDs receive power according to the following classification:

Class	Max power used by PD
0	0.44 to 12.95W
1	0.44 to 3.84W
2	3.84 to 6.49W
3	6.49 to 12.95W

PSE provides power according to the following classification:

Class	Max power provided by PSE
0	15.4W
1	4.0W
2	7.0W
3	15.4W

The PoE commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

Command	Parameters
config poe system	{power_limit <value 37-370>   power_disconnect_method [deny_next_port   deny_low_priority_port]}
config poe ports	[all   <portlist>] {state [enable   disable]   priority [critical   high   low]   power_limit [class_0   class_1   class_2   class_3   user_define <value 1000-16800>]}
show poe	[system   ports {<portlist>}]

Each command is listed in detail in the following sections.

### config poe system

<b>Purpose</b>	Used to configure the parameters for the whole PoE system.
<b>Syntax</b>	<b>config poe system {power_limit &lt;value 37-370&gt;   power_disconnect_method [deny_next_port   deny_low_priority_port]}</b>
<b>Description</b>	Allows the user to configure the parameters for the whole PoE system.
<b>Parameters</b>	<i>power_limit</i> - The power limit parameter allows the user to configure the power budget of whole PoE system. The minimum setting is 37 W and the maximum is 370W (depending on the power supplier's capability). Default setting is 370 W.

**config poe system**

*power\_disconnect\_method* -This parameter is used to configure the power management disconnection method. When the total consumed power exceeds the power budget, the PoE controller initiates a port disconnection to prevent overloading the power supply. The controller uses one of the following two ways to implement the disconnection:

- *deny\_next\_port* - After the power budget has been exceeded, the next port attempting to power up is denied, regardless of its priority.
- *deny\_low\_priority\_port* - After the power budget has been exceeded, the next port attempting to power up, causes the port with the lowest priority to shut down (to allow high-priority ports to power up).

The default setting is *deny\_next\_port*.

**Restrictions**

User Account Command Level – Administrator and Operator

Example usage:

To config the PoE System on the Switch:

```
DES-3800:admin#config poe system power_limit 300
power_disconnect_method deny_next_port
Command: config poe system power_limit 300
power_disconnect_method deny_next_port
```

Success.

```
DES-3800:admin#
```

**config poe ports****Purpose**

Used to configure the PoE port settings.

**Syntax**

```
config poe ports [all | <portlist>] {state [enable | disable] |
priority [critical | high | low] | power_limit [class_0 | class_1 |
class_2 | class_3 | user_define <value 1000-16800>]}
```

**Description**

The **config poe ports** command is used to configure the PoE port settings.

**Parameters**

<portlist> -Specifies a range of ports to be configured or all the ports.

*all* – Specifies that all ports on the Switch will be configured for PoE.

*state* - Enables or disables the PoE function on the Switch.

*priority* - Setting the port priority affects power-up order and shutdown order. **Power-up order:** When the Switch powers-up or reboots, the ports are powered up according to their priority (*critical* first, then *high* and finally *low*). **Shutdown order:** When the power limit has been exceeded, the ports will shut down according to their priority if the power disconnect method is set to *deny\_low\_priority\_port*.

- *critical* – Specifying this parameter will nominate these ports as having the highest priority for all configured PoE ports. These ports will be the first ports to receive power and the last to disconnect power.
- *high* – Specifying this parameter will nominate these ports as having the second highest priority for receiving power

## config poe ports

and shutting down power.

- *low* – Specifying this parameter will nominate these ports as having the lowest priority for receiving and shutting down power. These ports will be the first ports to have their power disconnected if the *power\_disconnect\_method* chosen in the **config poe system** command is *deny\_low\_priority\_port*.

*power\_limit* – Allows the user to configure the per-port power limit. If a port exceeds its power limit, the PoE system will shut down that port. The minimum user-defined setting is 1000mW and maximum is 16800mW. The default setting is 15400mW. The user may also choose to define a power class by which to set the power limit, based on the PSE table at the beginning of this section.

- *class\_0* – Choosing this class will set the maximum port limit at 15.4W.
- *class\_1* – Choosing this class will set the maximum port limit at 4.0W.
- *class\_2* – Choosing this class will set the maximum port limit at 7.0W.
- *class\_3* – Choosing this class will set the maximum port limit at 15.4.0W.
- *user\_define* – Choosing this parameter will allow the user to set a power limit between 1000 and 16800mW with a default value of 15400mW.

### Restrictions

User Account Command Level – Administrator and Operator

Example usage:

To config the Switch's ports for PoE:

**DES-3800:admin#config poe ports 1-3 state enable priority critical power\_limit class\_0**

**Command: config poe ports 1-3 state enable priority critical power\_limit class\_0**

**Power limit has been set to 15400mW(Class 0 PD upper power limit 12.95W + power loss on cable).**

**Success.**

**DES-3800:admin#**

## show poe system

Purpose	Used to display the setting and actual values of the whole PoE system.
Syntax	<b>show poe [system   ports {&lt;portlist&gt;}]</b>
Description	Display the settings, actual values and port configuration of the whole PoE system.
Parameters	<p><i>system</i> – Choosing this parameter will display the system settings for PoE, such as switch power limit, consumption, remaining useable power and the power disconnection method.</p> <p><i>ports</i> – Choosing this parameter will display the settings for PoE on a port-by-port basis.</p> <ul style="list-style-type: none"> <li>• <i>portlist</i> – Enter a port or range of ports to be displayed for their PoE settings.</li> </ul>
Restrictions	None.

Example usage:

To display the power settings for the switch system:

```
DES-3800:admin#show poe system
Command: show poe system

PoE System Information
-----
Power Limit           : 300 (watts)
Power Consumption     : 0 (watts)
Power Remained        : 300 (watts)
Power Disconnection Method : deny next port
If Power remained is less than 19 watts(Power Guard Band) and Power Disconnection
Method is set to deny next port, then no additional port will be connected.

DES-3800:admin#
```

Example usage:

To display the power settings for the switch's ports

```
DES-3800:admin#show poe ports
Command: show poe ports

Port  State      Priority   Power Limit(mW)
