#### Federal Communication Commission Interference Statement

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with this user's guide, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

#### Innovation, Science and Economic Development Canada (ISED) Statement

This Class A digital apparatus complies with Canadian ICES-003. Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

#### VCCI-A Warning

この装置は、クラス A 情報技術装置です。 この装置を家庭環境で使用すると電波妨害を引き起こ

すことがあります。 この場合には使用者が適切な対策を講ずるよう要求されることがあります。

Japan Voluntary Control Council for Interference Statement

This is a Class A product based on the standard of the Voluntary Control Council for Interference (VCCI). If this equipment is used in a domestic environment, radio interference may occur, in which case the user may be required to take corrective actions.

### 警告使用者:

此為甲類的資訊技術設備,在居住環境中使用時,可能會造成射頻擾動,在這種情況下,使用者會被要

求採取某些適當的對策。

#### Warning:

This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

# 1. Introduction

This manual's command descriptions are based on the software release 1.00. The commands listed here are the subset of commands that are supported by the DGS-1100 Series switch.

# Audience

This reference manual is intended for network administrators and other IT networking professionals responsible for managing the switch by using the Web User Interface (Web UI). The Web UI is the secondary management interface to the DGS-1100 Series switch, which will be generally be referred to simply as "the Switch" within this manual. This manual is written in a way that assumes that you already have the experience and knowledge of Ethernet and modern networking principles for Local Area Networks.

# **Other Documentation**

The documents below are a further source of information in regards to configuring and troubleshooting the switch. All the documents are available either from the CD, bundled with this switch, or from the D-Link website. Other documents related to this switch are:

- Getting started Guide
- D-Link Network Assistant (DNA) User Guide

# Conventions

Convention	Description
Boldface Font	Indicates a button, a toolbar icon, menu, or menu item. For example: Open the <b>File</b> menu and choose <b>Cancel</b> . Used for emphasis. May also indicate system messages or prompts appearing on screen. For example: <b>You have mail</b> . Bold font is also used to represent filenames, program names and commands. For example: use the <b>copy</b> command.
Initial capital letter	Indicates a window name. Names of keys on the keyboard have initial capitals. For example: Click Enter.
Menu Name > Menu Option	Indicates the menu structure. <b>Device &gt; Port &gt; Port Properties</b> means the <b>Port Properties</b> menu option under the <b>Port</b> menu option that is located under the <b>Device</b> menu.
Blue Courier Font	This convention is used to represent an example of a screen console display including example entries of CLI command input with the corresponding output.

# **Notes, Notices, and Cautions**

Below are examples of the three types of indicators used in this manual. When administering your switch using the information in this document, you should pay special attention to these indicators. Each example below provides an explanatory remark regarding each type of indicator.

**NOTE:** A note indicates important information that helps you make better use of your device.

**NOTICE:** A notice indicates either potential damage to hardware or loss of data and tells you how to avoid the problem.

**CAUTION:** A caution indicates a potential for property damage, personal injury, or death.

# 2. Product Introduction

Thank you and congratulations on your purchase of D-Link DGS-1100 Series Switch Products.

D-Link's next generation DGS-1100 Series switches blends plug-and-play simplicity with exceptional value and reliability for small and medium-sized business (SMB) networking. All models are housed in a new style rack-mount metal case with easy-to-view front panel diagnostic LEDs.

The brand-new DGS-1100 series are born to be green by design of IEEE 802.3az Energy Efficient Ethernet compliant (abbreviated as EEE) and D-Link Green Technologies. It allows significant power saving during periods of low data activity. In most of use cases and environments, switches are idle in 90% or more of time. While no traffic in a short period of time, ports on DGS-1100 switch get into power saving mode automatically. Once if a packet is received, the switch wakes and works immediately. Connecting to EEE compliant devices, such as PCs and servers, the network can save energy without compromising any performance. While connecting to legacy devices which do not support IEEE 802.3az, D-Link Green Technologies can reduce power consumption by changing the power state of the link.

# 3. Hardware Installation

This chapter provides unpacking and installation information for the D-Link Switch.

# **Step1: Unpacking**

Open the shipping carton and carefully unpack its contents. Please consult the packing list located in the User Manual to make sure all items are present and undamaged. If any item is missing or damaged, please contact your local D-Link reseller for replacement.

### Packing contents of DGS-1100-16V2 /24V2 /24PV2/10MPV2/10MPPV2/26MPV2/26MPPV2/18PV 2

- \_ \_ . . . \_ \_
- One D-Link DGS-1100 Series Switch
- AC power cord
- Four rubber feet
- Screws and two mounting brackets
- One accessory kit for a ground screw
- One Getting Started Guide

If any item is found missing or damaged, please contact the local reseller for replacement.

## **Step2: Switch Installation**

For safe switch installation and operation, it is recommended that you:

- Visually inspect the power cord to see that it is secured fully to the AC power connector.
- Make sure that there is proper heat dissipation and adequate ventilation around the switch.
- Do not place heavy objects on the switch.

### **Desktop or Shelf Installation**

When installing the switch on a desktop or shelf, the rubber feet included with the device must be attached on the bottom at each corner of the device's base. Allow enough ventilation space between the device and the objects around it.

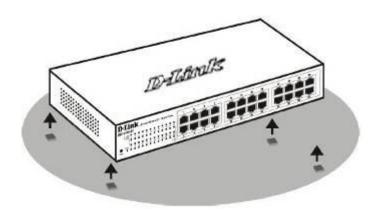

Figure 3-1 – Attach the adhesive rubber pads to the bottom

### **Rack Installation**

The switch can be mounted in an EIA standard size 19-inch rack, which can be placed in a wiring closet with other equipment. To install, attach the mounting brackets to the switch's side panels (one on each side) and secure them with the screws provided (please note that these brackets are not designed for palm size switches).

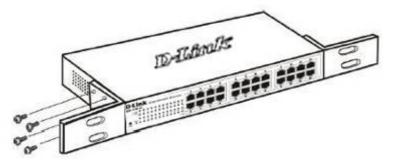

Figure 3-2 – Attach the mounting brackets to the Switch

Then, use the screws provided with the equipment rack to mount the switch in the rack.

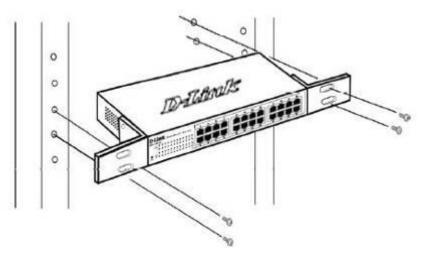

Figure 3-3– Mount the Switch in the rack or chassis

Please be aware of following safety Instructions when installing:

A) Elevated Operating Ambient - If installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack environment may be greater than room ambient. Therefore, consideration should be given to installing the equipment in an environment compatible with the maximum ambient temperature (Tma) specified by the manufacturer.

B) Reduced Air Flow - Installation of the equipment in a rack should be such that the amount of air flow required for safe operation of the equipment is not compromised.

C) Mechanical Loading - Mounting of the equipment in the rack should be such that a hazardous condition is not achieved due to uneven mechanical loading.

D) Circuit Overloading - Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of the circuits might have on overcurrent protection and supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern.

E) Reliable Earthing - Reliable earthing of rack-mounted equipment should be maintained. Particular attention should be given to supply connections other than direct connections to the branch circuit (e.g. use of power strips)."

### **Step 3 – Plugging in the AC Power Cord**

Users may now connect the AC power cord into the rear of the switch and to an electrical outlet (preferably one that is grounded and surge protected).

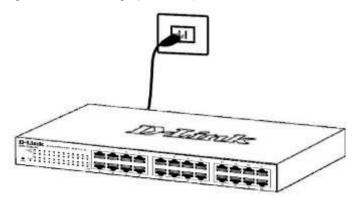

Figure 3-4 – Plugging the switch into an outlet

### **Power Failure**

As a precaution, the switch should be unplugged in case of power failure. When power is resumed, plug the switch back in.

### **Grounding the Switch**

This section describes how to connect the DGS-1100 Series Switch to ground. You must complete this procedure before powering your switch.

#### **Required Tools and Equipment**

- Ground screws (included in the accessory kit): One M4 x 6 mm (metric) pan-head screw
- Ground cable (not included in the accessory kit): The grounding cable should be sized according to local and national installation requirements. Depending on the power supply and system, a 12 to 6 AWG copper conductor is required for U.S installation. Commercially available 6 AWG wire is recommended. The length of the cable depends on the proximity of the switch to proper grounding facilities.
- A screwdriver (not included in the accessory kit)

The following steps let you connect the switch to a protective ground:

Step 1: Verify if the system power is off.

Step 2: Use the ground cable to place the #8 terminal lug ring on top of the ground-screw opening, as seen in the figure below.

Step 3: Insert the ground screw into the ground-screw opening.

Step 4: Using a screwdriver, tighten the ground screw to secure the ground cable to the switch.

Step 5: Attach the terminal lug ring at the other end of the grounding cable to an appropriate grounding stud or bolt on rack where the switch is installed.

Step 6: Verify if the connections at the ground connector on the switch and the rack are securely attached.

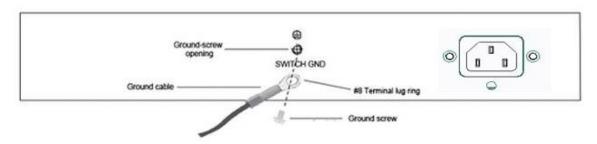

Figure 3-5 – Ground cable, screw and #8 terminal lug rings

# 4. Web-based Switch Configuration

Management Options Connecting using the Web User Interface Logging onto the Web Manager Smart Wizard Web User Interface (Web UI)

### **Management Options**

The Switch provides multiple access platforms that can be used to configure, manage and monitor networking features available on the Switch. Currently there are three management platforms available and they are described below.

#### Web-based Management Interface

After successfully installing the Switch, the user can configure the Switch, and display statistics graphically using a Web browser, such as Microsoft® Internet Explorer, Opera Firefox, Safari, or Google Chrome.

#### **SNMP-based Management**

The Switch can be managed with an SNMP-compatible console program. The Switch supports SNMP version 1.0, and version 2c. The SNMP agent decodes the incoming SNMP messages and responds to requests with MIB objects stored in the database. The SNMP agent updates the MIB objects to generate statistics and counters.

#### **D-Link Network Assistant**

DNA (D-Link Network Assistant) is a program for discovering DGS-1100 Series Switches with the same L2 network segment connected to your PC.

# **Connecting using the Web User Interface**

Most software functions of the DGS-1100 Series switches can be managed, configured and monitored via the embedded web-based (HTML) interface. Manage the Switch from remote stations anywhere on the network through a standard web browser. The web browser acts as a universal access tool and can communicate directly with the Switch using the HTTP or HTTPS protocol.

You need the following equipment to begin the web configuration of your device:

- A PC with a RJ-45 Ethernet connection
- A standard Ethernet cable

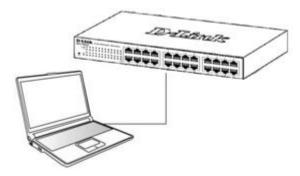

Figure 4-1 Connecting to a DGS-1100 Series Switch

Connect the Ethernet cable to any of the ports on the front panel of the switch and to the Ethernet port on the PC.

## Logging onto the Web Manager

To access the Web User Interface, simply open a standard web browser on the management PC and enter the Switch's default IP address into the address bar of the browser and press the **Enter** key.

**NOTE:** The default IP address of this switch is **10.90.90.90**, with a subnet mask of **255.255.255.0**.

Figure 4-3 User Authentication window

By default, the username is "admin" and the password is also "admin". Click the Login button.

# **Smart Wizard**

After a successfully connecting to the Web User Interface for the first time, the Smart Wizard embedded Web utility will be launched. This wizard will guide the user through basic configuration steps that is essential for first time connection to the Switch.

#### Step 1 – System IP Information

In this window, the user can configure the IP address assignment method, the static IP address, Netmask and Gateway address.

Welcome to	The wizard will g SNMP.If you are	uide you to do basic configurations on 3 steps for the IP Information, and not changing the settings, click on "Exit" to go back to the main page. wizard will help to complete settings for System IP address, Netmask, and

Figure 5-8 Port Status window

### **Jumbo Frame**

This window is used to view and configure the Jumbo Frame settings. The Switch supports jumbo frames. Jumbo frames are Ethernet frames with more than 1,518 bytes of payload. The Switch supports jumbo frames with a maximum frame size of up to 10240 bytes.

To view the following window, click **System > Port Configuration > Jumbo Frame**, as shown below:

Jumbo Frame		
Frame State	Enabled     Isabled	
Note:Maximum frame length is 10240 bytes if enabled		Apply

Figure 5-9 Jumbo Frame window

The fields that can be configured are described below:

Parameter	Description
Frame State	Select whether to <b>Enable</b> or <b>Disable</b> support for Jumbo Frames on the switch.

Click the **Apply** button to accept the changes made.

# **PoE (PoE Model Only)**

The DGS-1100 PoE Model switch supports Power over Ethernet (PoE) as defined by the IEEE 802.3af and 802.3at.DGS-1100 MPP series also support the IEEE 802.3bt standard.

Switch Model	Port Numbers	Power Rating
DGS-1100-10MPV2	1-8	30W
DGS-1100-10MPPV2	1-8	30W
	7-8	90W
DGS-1100-26MPV2	1-24	30W
DGS-1100-26MPPV2	1-24	30W
	21-24	90W
DGS-1100-24PV2	1-12	30W
DGS-1100-18PV2	1-16	30W

The ports and power ratings per switch are as follows:

Ports can be supplied at 48 VDC power to Powered Devices (PDs) over Category 5 or Category 3 UTP Ethernet cables. The Switch follows the standard PSE (Power Sourcing Equipment) pinout *Alternative A*, whereby power is sent out over pins 1, 2, 3 and 6. The Switches work with all D-Link 802.3af capable devices.

The Switch includes the following PoE features:

- Auto-discovery recognizes the connection of a PD (Powered Device) and automatically sends power to it.
- The Auto-disable feature occurs under two conditions: firstly, if the total power consumption
  exceeds the system power limit; and secondly, if the per port power consumption exceeds the
  per port power limit.
- Active circuit protection automatically disables the port if there is a short. Other ports will remain active.

Based on 802.3af/at PDs receive power according to the following classification:

Class	Maximum power used by PD
0	12.95W
1	3.84W
2	6.49W
3	12.95W
4	25.5W

PSE	provides	power	according	to	the	following
classi	fication:					

Class	Max power supplied by PSE
0	16.2W
1	4.2W
2	7.4W
3	16.2W
4	31.6W

# **PoE System**

This window is used to configure the PoE system and display the detailed power information and PoE Trap parameters for PoE modules.

To view the following window, click **System > PoE > PoE System**, as shown below:

DE System			
Jsage Threshold (1-99) Trap State 19 % Disabled			Apply
Power Budget (W)	Delivered (W)	Usage Threshold (%)	Trap State

Figure 5-10 PoE System window

The fields that can be configured are described below:

Parameter	Description
Usage Threshold	Enter the usage threshold to generate a log and send the corresponding standard notification.
Trap State	Select this option to enable or disable the sending of PoE notifications.

Click the **Apply** button to accept the changes made.

## **PoE Status**

This window displays the PoE status of each port.

To view the following window, click **System > PoE > PoE Status**, as shown below:

Port	State	Class	Max (W)	Used (W)
eth1	Searching	N/A	0.0	0.0
eth2	Searching	N/A	0.0	0.0
eth3	Searching	N/A	0.0	0.0
eth4	Searching	N/A	0.0	0.0
eth5	Searching	N/A	0.0	0.0
eth6	Searching	N/A	0.0	0.0

#### Figure 5-11 PoE Status window

**Note**: For the PoE Status table, if the classification was shown as "Legacy PD", it will be classified to non-AF PD or Legacy PD.

# PoE Configuration(DGS-1100-24PV2/10MPV2/26MPV2/18PV2 Only)

This window is used to configure the PoE port.

To view the following window, click **System > PoE > PoE Configuration**, as shown below:

E Configuration					
From Port	To Port Prior	ity State	Power Limit Max.Wattag	e(1000-30000)	
eth1 -	eth1 💌 Lov	Disabled 💌	Auto 💌 🗖	milliwatts	
Time Range					
None	]				Apply
Port	State	Priority	Power Limit	Time Range	
eth1	Enabled	Low	30000		Delete Time Range
eth2	Enabled	Low	30000		Delete Time Range
eth3	Enabled	Low	30000		Delete Time Range
eth4	Enabled	Low	30000		Delete Time Range
eth5	Enabled	Low	30000		Delete Time Range
eth6	Enabled	Low	30000		Delete Time Range
eth7	Enabled	Low	30000		Delete Time Range
eth8	Enabled	Low	30000		Delete Time Range
eth9	Enabled	Low	30000		Delete Time Range
eth10	Enabled	Low	30000		Delete Time Range
eth11	Enabled	Low	30000		Delete Time Range
eth12	Enabled	Low	30000		Delete Time Range

The fields that can be configured are described below:

Parameter	Description
From Port / To Port	Select the appropriate port range used for the configuration here.
Priority	Select the priority for provisioning power to the port. Options to choose from are <b>Critical</b> , <b>High</b> and <b>Low</b> .
State	Select this option to enable or disable the PoE functionality.
Power Limit	Select the power management mode for the PoE ports. Options to choose from are <b>Auto</b> , <b>Class 1</b> , <b>Class 2</b> , <b>Class 3</b> , <b>and Class 4</b> .
Max Wattage	When selecting <b>Auto</b> in the <b>Mode</b> drop-down list, this option appears. Tick the check box and enter the maximum wattage of power that can be provisioned to the auto-detected PD. If the value is not entered, the class of the PD automatically determines the maximum wattage which can be provisioned. The valid range for maximum wattage is between 1000 mW and 30000 mW.
Time Range	Select the Time Range from the drop-down list.
	<b>Note</b> : The <b>Time Range</b> drop down menu will only have available options if a time profile has been created.

Click the **Delete Time Range** button to clear the setting in the corresponding Time Range field. Click the **Apply** button to accept the changes made.

**Note**: The **Max Wattage** option will only be available if the check box next to the input field is enabled. When enabled, the Power Limit drop down menu will not be available.

Note: If the switch failed to supply power to the IEEE 802.3at PD (Powered Device),

1. Check if the PD connected to the port supports the IEEE 802.3at standard.

2. Manually configure the corresponding port's power limit value to 30 Watts.

# PoE Configuration(DGS-1100-10MPPV2/26MPPV2 Only)

This window is used to configure the PoE port.

To view the following window, click **System > PoE > PoE Configuration**, as shown below:

#### Figure 5-14 PD Alive window

The fields that can be configured are described below:

Parameter	Description
From Port / To Port	Select the appropriate port range used for the configuration here.
PD Alive State	Select to enable or disable the state of the PoE alive function on the specified port(s) here.
PD IP Address	Enter the IPv4 address of the target PD here.
Poll Interval (10-300)	Enter the poll interval value here. The range is from 10 to 300 seconds. This is the interval at which ping requests will be sent to the target PD to check the status.
Retry Count (0-5)	Enter the retry count value here. The range is from 0 to 5. This is the amount of times that the ping request will be resend if the target PD does not respond.
Waiting Time (30-300)	Enter the waiting time value here. The range is from 30 to 300 seconds. This is the time the Switch will wait for the PD to recover from rebooting.
Action	Select the action that will be taken here. Options to choose from are:
	Reset - Specifies to reset the PoE port state.
	<ul> <li>Notify - Specifies to send logs and traps to notify the administrator.</li> </ul>
	• <b>Both</b> - Specifies to send logs and traps and then to reset the PoE port state.

Click the **Apply** button to accept the changes made.

# System Log

# **System Log Settings**

This window is used to view and configure the system's log settings.

To view the following window, click **System > System Log > System Log Settings**, as shown below:

System Log Settings		
Global State		
System Log	Disabled	Apply
Buffer Log Settings		
Buffer Log State	Enabled	Apply

Figure 5-15 System Log Settings window

The fields that can be configured for Global State are described below:

Parameter	Description
System Log	Select this option to enable or disable the System Log functionality.

Click the **Apply** button to accept the changes made.

The fields that can be configured for **Buffer Log Settings** are described below:

Parameter	Description
Buffer Log State	Select whether the enable or disable the buffer log's global state here. Options to choose from are <b>Enable</b> , <b>Disabled</b> .

Click the Apply button to accept the changes made.

## System Log Server Settings

This window is used to view and configure system log's server settings.

To view the following window, click **System > System Log > System Log Server Settings**, as shown below:

System Log Server Setting Log Server	js		_			
Host IPv4 Address UDP Port (514,1024-65535)	514		Facility Severity	Local 0 🔹 Warning		Apply
Server IP Address		Severity		Facility	UDP Port	_

Figure 5-16 System Log Server Settings window

The fields that can be configured are described below:

Parameter	Description
Host IPv4 Address	Enter the system log server's IPv4 address here.
UDP Port	Enter the system log server's UDP port number here. This value must be between 1024 and 65535. By default, this value is 514.
Facility	Specifies an application from which system logs are sent to the remote server. Only one facility can be assigned to a single server. If a second facility level is assigned, the first facility is overwritten. There are up to eight facilities can be assigned (Local 0 to Local 7).
Severity	Select the severity value of the type of information that will be logged. Options to choose from are <b>Warning, informational,</b> and <b>All</b>
	The possible levels are:
	<b>Warning</b> - The lowest level of a device warning. The device is functioning, but an operational problem has occurred.
	Informational - Provides device information.
	All - Displays all levels of system logs.

Click the **Apply** button to accept the changes made.

## System Log

This window is used to view and clear the system log.

To view the following window, click System > System Log > System Log, as shown below:

System Log			
System Log			
			Clear Log
Total Entries: 0			
Total Entries. 0			
Index	Time	Level	Log Description

Figure 5-17 System Log window

Click the **Clear Log** button to clear the system log entries displayed in the table.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

# Time

The Simple Network Time Protocol (SNTP) is a protocol for synchronizing computer clocks through the Internet. It provides comprehensive mechanisms to access national time and frequency dissemination services, organize the SNTP subnet of servers and clients, and adjust the system clock in each participant.

## **Clock Settings**

This window is used to configure the time settings for the Switch.

To view the following window, click **System > Time > Clock Settings**, as shown below:

Clock Settings		
Clock Settings		
Time (HH:MM:SS)	00:03:37	
Date (DD / MM / YYYY)	01/01/2000	
		Apply

Figure 5-18 Clock Settings window

The fields that can be configured are described below:

Parameter	Description
Time (HH:MM:SS)	Enter the current time in hours, minutes, and seconds.
Date (DD / MM / YYYY)	Enter the current day, month, and year to update the system clock.

Click the **Apply** button to accept the changes made.

# **Time Zone Settings**

This window is used to configure time zones and Daylight Savings Time settings for SNTP.

To view the following window, click System > Time > Time Zone Settings, as shown below:

ne Zone Settings		
ummer Time State	Disabled	
ime Zone	+ • 8 • 0 •	
ate Setting		
rom: Date of the Month	1	
rom: Month	Jan	
rom:Year	2000	
rom: Time (HH:MM)		
o: Date of the Month	1	
o: Month	Jan	
o:Year	2000	
o: Time <mark>(</mark> HH:MM)		
Offset	60	

Figure 5-19 Time Zone Settings window

The fields that can be configured are described below:

Parameter	Description
Summer Time State	Select the summer time setting. Options to choose from are <b>Disabled</b> , and <b>Date Setting</b> .
	<b>Disabled</b> - Select to disable the summer time setting.
	<b>Date Setting</b> - Select to configure the summer time that should start and end on the specified date.
Time Zone	Select to specify your local time zone's offset from Coordinated Universal Time (UTC).

The fields that can be configured for **Date Setting** are described below:

Parameter	Description
From: Date of the Month	Select date of the month that summer time will start.
From: Month	Select the month that summer time will start.
From: Year	Enter the year that the summer time will start.
From: Time (HH:MM)	Select the time of the day that summer time will start.
To: Date of the Month	Select date of the month that summer time will end.
To: Month	Select the month that summer time will end.
To: Year	Enter the year that the summer time will end.
To: Time (HH:MM)	Select the time of the day that summer time will end.
Offset	Enter the number of minutes to add during summer time. The default value is 60. The range of this offset is 30, 60, 90 and 120.

Click the **Apply** button to accept the changes made.

# **SNTP Settings**

This window is used to configure the time settings for the Switch.

To view the following window, click **System > Time > SNTP Settings**, as shown below:

SNTP Settings				
SNTP Global Settings				
Current Time Source	System Clock			
SNTP State	Disabled			
Poll Interval (30-99999)	1000	sec		Apply
SNTP Server Setting				
IPv4 Address				Apply
SNTP server		Stratum	Version	Last Receive
0.0.0.0		-	•	*

Figure 5-20 SNTP Settings window

The fields that can be configured for SNTP Global Settings are described below:

Parameter	Description
SNTP State	Select this option to enable or disable SNTP.
Pool Interval	Enter the synchronizing interval in seconds. The value is from 30 to 99999 seconds. The default interval is 720 seconds.

Click the **Apply** button to accept the changes made.

The fields that can be configured for SNTP Server Setting are described below:

Parameter	Description
IPv4 Address	Enter the IP address of the SNTP server which provides the clock synchronization.

Click the Apply button to add the SNTP server.

Click the **Delete** button to remove the specified entry.

# **Time Range**

This window is used to view and configure the time range settings. The maximum number of time profiles supported by the switch is 4.

To view the following window, click **System > Time Range**, as shown below:

me Range					_
Fime Range					
Range Name	8 chars 🔲 Daily				
From: Week	Sun	To: Week	Sun		
From: Time (HH:MM)	00 💌 00 💌	To: Time (HH:MM)	00 🔳 00		Apply
Total Entries: 0					
Range Name	Start Weekday	Start Time	End Weekday	End Time	

Figure 5-21 Time Range window

The fields that can be configured are described below:

Parameter	Description
Range Name	Enter the name of the time range. This name can be up to 8 characters long.
From Week / To Week	Select the starting and ending days of the week that will be used for this time range. Tick the <b>Daily</b> option to use this time range for every day of the week. Tick the <b>End Week</b> <b>Day</b> option to use this time range from the starting day of the week until the end of the week, which is Sunday.
From Time / To Time	Select the starting and ending time of the day that will be used for this time range. The first drop-down menu selects the hour and the second drop-down menu selects the minute.

Click the Apply button to accept the changes made.

Click the **Delete** button to remove the specified entry.

# 6. Management

User Account Settings SNMP HTTP/HTTPS D-Link Discovery Protocol

# **User Account Settings**

This window is used to configure the user accounts. The active user account sessions can be viewed.

There are several configuration options available in the Web User Interface (Web UI). The set of configuration options available to the user depends on the account's **Privilege Level**.

NOTE: By default, the admin account is created on the Switch.

To view the following window, click **Management > User Account Settings**, as shown below:

r Accounts Settings			
er Name admin 💌		l chars	Apply
otal Entries: 1			
User Name	P	rivilege Password	

Figure 6-1 User Management Settings window

The fields that can be configured are described below:

Parameter	Description
User Name	Select the user account name here.
Password	Enter the password for the account here.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified user account entry.

Note: Only one user can be logged into the switch at any time.

# SNMP

Simple Network Management Protocol (SNMP) is an OSI Layer 7 (Application Layer) designed specifically for managing and monitoring network devices. SNMP enables network management stations to read and modify the settings of gateways, routers, switches, and other network devices. Use SNMP to configure system features for proper operation, monitor performance and detect potential problems in the Switch, switch group or network.

Managed devices that support SNMP include software (referred to as an agent), which runs locally on the device. A defined set of variables (managed objects) is maintained by the SNMP agent and used to manage the device. These objects are defined in a Management Information Base (MIB), which provides a standard presentation of the information controlled by the on-board SNMP agent. SNMP defines both the format of the MIB specifications and the protocol used to access this information over the network.

The Switch supports the SNMP versions 1, and 2c. The two versions of SNMP vary in the level of security provided between the management station and the network device.

In SNMP v.1 and v2c, user authentication is accomplished using 'community string', which function like passwords. The remote user SNMP application and the Switch SNMP must use the same community string. SNMP packets from any station that has not been authenticated are ignored (dropped).

### <u>Traps</u>

Traps are messages that alert network personnel of events that occur on the Switch. The events can be as serious as a reboot (someone accidentally turned OFF the Switch), or less serious like a port status change. The Switch generates traps and sends them to the trap recipient (or network manager). Typical traps include trap messages for Authentication Failure, and Topology Change.

#### <u>MIBs</u>

The Switch in the Management Information Base (MIB) stores management and counter information. The Switch uses the standard MIB-II Management Information Base module. Consequently, values for MIB objects can be retrieved from any SNMP-based network management software. In addition to the standard MIB-II, the Switch also supports its own proprietary enterprise MIB as an extended Management Information Base. Specifying the MIB Object Identifier may also retrieve the proprietary MIB. MIB values can be either read-only or read-write.

The Switch supports the Simple Network Management Protocol (SNMP) versions 1, and 2c. The administrator can specify the SNMP version used to monitor and control the Switch.

SNMP settings are configured using the menus located on the SNMP folder of the Web manager. Workstations on the network that are allowed SNMP privileged access to the Switch can be restricted with the Management Station IP Address menu.

## **SNMP Global Settings**

This window is used to configure the SNMP global settings and trap settings.

To view the following window, click **Management > SNMP > SNMP Global Settings**, as shown below:

SNMP Global Settings			
SNMP Global State	C Enabled	Disabled	
Trap Settings			
Trap Global State	Enabled	Disabled	
SNMP Authentication Trap			
Port Link Up			
Port Link Down			
Coldstart			
Warmstart			

Figure 6-2 SNMP Global Settings window

The fields that can be configured for SNMP Global Settings are described below:

Parameter	Description
SNMP Global State	Select this option to enable or disable the SNMP feature.

Parameter	Description
Trap Global State	Select this option to enable or disable the sending of all or specific SNMP notifications.
SNMP Authentication Trap	Tick this option to control the sending of SNMP authentication failure notifications.
Port Link Up	Tick this option to control the sending of port link up notifications.
Port Link Down	Tick this option to control the sending of port link down notifications.
Coldstart	Tick this option to control the sending of SNMP Coldstart notifications.
Warmstart	Tick this option to control the sending of SNMP Warmstart notifications.

The fields that can be configured for **Trap Settings** are described below:

Click the **Apply** button to accept the changes made.

### **SNMP Community Table Settings**

This window is used to create an SNMP community string to define the relationship between the SNMP manager and an agent. The community string acts like a password to permit access to the agent on the Switch. One or more of the following characteristics can be associated with the community string:

• Read/write or read-only level permission for the MIB objects accessible to the SNMP community.

To view the following window, click **Management > SNMP > SNMP Community Table Settings**, as shown below:

SNMP Commun	ity Table Settings			
SNMP Community S	iettings			
Access Right	Read Write	Community Name	16 chars	Apply
Total Entries: 2				
	Access Right		Community Na	ime
Read-Write		private		
	Read-Only		public	

Figure 6-3 SNMP Community Table Settings window

The fields that can be configured are described below:

Parameter	Description
Access Right	Select the access right here. Options to choose from are <b>Read Only</b> and <b>Read Write</b> .
	<b>Read Only</b> - SNMP community members using the community string created can only read the contents of the MIBs on the Switch.
	<b>Read Write</b> - SNMP community members using the community string created can read from and write to the contents of the MIBs on the Switch.
Community Name	Enter an alphanumeric string of up to 16 characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch's SNMP agent.

Click the **Apply** button to accept the changes made.

# **SNMP Host Table Settings**

This window is used to configure and display the recipient of the SNMP notification.

To view the following window, click Management > SNMP > SNMP Host Table Settings, as shown below:

SNMP Host Table Settings			
SNMP Host Settings			
Host IPv4 Address User-based Security Model Community String	SNMPv1 16 chars Apply		
Host IP Address		SNMP Version	Community String

Figure 6-4 SNMP Host Table Settings

The fields that can be configured are described below:		
Parameter	Description	
Host IPv4 Address	Enter the IPv4 address of the SNMP notification host.	
User-based Security Model	Select the security model here. Options to choose from are <b>SNMPv1</b> , and <b>SNMPv2c</b> .	
	<b>SNMPv1</b> - Select to allow the group user to use the SNMPv1 security model.	
	<b>SNMPv2c</b> - Select to allow the group user to use the SNMPv2c security model.	
Community String	Enter the community string to be sent with the notification packet.	

The fields that can be configured are described below:

Click the Apply button to accept the changes made.

# HTTP/HTTPS

This window is used to configure Web settings on the Switch.

To view the following window, click **Management > HTTP/HTTPS**, as shown below:

HTTP/HTTPS		
HTTP/HTTPS		
Web Session	● HTTP ○ HTTPS	
Web Session Timeout (60-36000)	1200 sec	Apply
Web Session Timeout (60-36000)	1200 sec	Apply

Figure 6-5 HTTP/HTTPS window

The fields that can be configured for HTTP/HTTPS Settings are described below:

Parameter	Description
Web Session	Select this option to enable the configuration through HTTP or HTTPS.
	<b>Note:</b> When switching from HTTP to HTTPS mode, the switch will take about 30 seconds to initialize the secured HTTP environment.
Web Session Timeout	Enter a value for the amount of time in seconds before the web session expires.

Click the **Apply** button to accept the changes made.

**Note**: If the switch is in HTTPS mode, the firmware or configuration cannot be upgraded using regular HTTP.

# **D-Link Discovery Protocol**

This window is used to configure and display D-Link Discovery Protocol (DDP).

To view the following window, click Management > D-Link Discovery Protocol, as shown below:

-Link Discovery Pr DP Global Setting							
D-Link Discovery Pi Report Timer	rotocol State	Enabled     Never	Disable				Apply
DP Port Settings							
From Port	eth1	-	To Port	eth1	State	Disabled	Apply

	et	h6				Enabled	
	et	h7				Enabled	
	et	h8				Enabled	
	et	h9				Enabled	

Figure 6-6 D-Link Discovery Protocol window

The fields that can be configured for **D-Link Discovery Protocol** are described below:

Parameter	Description
D-Link Discovery Protocol State	Select this option to enable or disable DDP global state.
Report Timer	Select the interval in seconds between two consecutive DDP report messages. Options to choose from are <b>30</b> , <b>60</b> , <b>90</b> , <b>120</b> , and <b>Never</b> .

Click the **Apply** button to accept the changes made.

# 7. L2 Features

FDB

VLAN Spanning Tree Loopback Detection Link Aggregation L2 Multicast Control LLDP

# FDB

# Static FDB

## **Unicast Static FDB**

This window is used to view and configure the static unicast forwarding settings on the Switch.

To view the following window, click L2 Features> FDB > Static FDB > Unicast Static FDB, as shown below:

Inicast Static FDB				
Port eth1	VID(1-4094)	MAC Address	00-84-57-00-00-00	Apply
Total Entries: 0				Delete A
VID	MAC Address		Port	

Figure 7-1 Unicast Static FDB window

Parameter	Description
Port	Allows the selection of the port number on which the MAC address entered resides.
VID	Enter the VLAN ID on which the associated unicast MAC address resides.
MAC Address	Enter the MAC address to which packets will be statically forwarded or dropped. This must be a unicast MAC address.

The fields that can be configured are described below:

Click the **Apply** button to accept the changes made.

Click the **Delete All** button to delete all the entries found in the display table.

Click the **Delete** button to remove the specified entry.

### **Multicast Static FDB**

This window is used to view and configure the multicast static FDB settings. To view the following window, click L2 Features > FDB > Static FDB > Multicast Static FDB, as shown below:

Multicast Static FDB				
Multicast Static FDB				
From Port	To Port	VID(1-4094)	MAC Address	
eth1	eth1		01-00-5E-XX-XX-XX	Apply
Total Entries: 0				Delete All
VID		MAC Address	Egress Ports	

Figure 7-2 Multicast Static FDB window

The fields that can be configured are described below:

Parameter	Description
From Port / To Port	Select the appropriate port range used for the configuration here.
VID	Enter the VLAN ID of the VLAN the corresponding MAC address belongs to.
MAC Address	Enter the static destination MAC address of the multicast packets. This must be a multicast MAC address. The format of the destination MAC address is 01-XX-XX-XX-XX-XX.

Click the **Apply** button to accept the changes made.

Click the Delete All button to remove all the entries.

Click the **Delete** button to remove the specific entry.

# **MAC Address Table Settings**

This window is used to view and configure the MAC address table's global settings.

To view the following window, click L2 Features > FDB > MAC Address Table Settings, as shown below:

MAC Address Table Settings		
Global Settings	MAC Address Learning	
Aging Time (0, 10 - 1000000)	300	sec
		Apply

The fields that can be configured are described below:

Parameter	Description
Aging Time	Enter the MAC address table's aging time value here. This value must be between 10 and 1000000 seconds. Entering 0 will disable MAC address aging. By default, this value is 300 seconds.

Click the **Apply** button to accept the changes made.

After clicking the **MAC Address Learning** tab, at the top of the page, the following page will be available.

Global Settings	MAC Add	ress Learning		
rom Port To F	Port	State		
eth1 💌 eth	n1 💌	Enabled		Apply
	Port		State	
	eth1		Enabled	
	eth2		Enabled	
	eth3		Enabled	
	eth4		Enabled	
	eth5		Enabled	
	eth6		Enabled	
	eth7		Enabled	
	eth8		Enabled	
	eth9		Enabled	
	eth10		Enabled	
	eth11		Enabled	
	eth12		Enabled	

Figure 7-4 MAC Address Table Settings (MAC Address Learning) window

The fields that can be configured are described below:

Parameter	Description
From Port / To Port	Select the range of ports that will be used for this configuration here.
State	Select to enable or disable the MAC address learning function on the ports specified here.

Click the **Apply** button to accept the changes made.

### **MAC Address Table**

This window is used to view the entries listed in the MAC address table.

To view the following window, click **L2 Features > FDB > MAC Address Table**, as shown below:

C Address Table			
tal Entries: 1			Clear All
VID	MAC Address	Туре	Port
1	94-05-B6-5D-2E-79	Dynamic	eth24

Figure 7-5 MAC Address Table window

Click the Clear All button to clear all dynamic MAC addresses.

# VLAN

# **VLAN Configuration Wizard**

This window is used to view and configure the VLAN settings on this switch.

To view the following window, click L2 Features > VLAN > VLAN Configuration Wizard, as shown below:

VLAN	Configuration	Wizard	
VLAN	Configuration Wizard	rd	
۲	Create VLAN VID (1-4094)		
O	Configure VLAN VID (1-4094)		Next

Figure 7-6 VLAN Configuration Wizard window

The fields that can be configured for VLAN Configuration Wizard are described below:

Parameter	Description
Create VLAN VID	Create VLAN ID
Configure VLAN VID	Configure VLAN ID

Click the **Next** button to accept the changes made.

This window is used to create the VLAN on this switch.

Figure 7-7 VLAN Configuration Wizard window

The fields that can be configured for VLAN Configuration Wizard are described below:

Parameter	Description
VLAN ID	Create VLAN VID
VLAN Name	VLAN Group name

Click the **Apply** button to accept the changes made.

## 802.1Q VLAN

This window is used to view and configure the VLAN settings on this switch.

To view the following window, click L2 Features > VLAN > 802.1Q VLAN, as shown below:

02.1Q VLAN						
VID List (2-4094)	3 or 2-5	]			Apply	Delete
LAN List						
Total Entries: 1						
	VLAN Name	Tagged Member Ports	Untagged Member Ports	VLAN Type		

Figure 7-8 802.1Q VLAN window

The fields that can be configured for 802.1Q VLAN are described below:

Parameter	Description
VID List	Enter the VLAN ID list that will be created here.

Click the **Apply** button to accept the changes made.

Click the **Edit** button to re-configure the specific entry.

Click the **Delete** button to remove the specific entry.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

## **Management VLAN**

This window is used to configure the Management VLAN function.

To view the following window, click L2 Features > VLAN > Management VLAN, as shown below:

Management VLAN Settings		
Management VLAN Settings		
Management VLAN State	Enabled   Disabled	
VID(1-4094)	1	Apply
Note: When 802.1Q Management VLAN	I is enabled, the 802.1Q VLAN should be enabled first.	

#### Figure 7-9 Management VLAN Settings window

Parameter	Description
Management VLAN State	Select this option to enable or disable the Management VLAN function.
VID	VLAN VID is a unique number (between 1 and 4094) that identifies a particular VLAN.

The fields that can be configured are described below:

Click the Apply button to accept the changes made.

## **Asymmetric VLAN**

This window is used to configure the asymmetric VLAN function.

To view the following window, click L2 Features > VLAN > Asymmetric VLAN, as shown below:

Apply

Figure 7-10 Asymmetric VLAN window

The fields that can be configured are described below:

Parameter	Description
Asymmetric VLAN State	Select this option to enable or disable the asymmetric VLAN function

Click the **Apply** button to accept the changes made.

## **VLAN Interface**

This window is used to view and configure VLAN interface settings.

To view the following window, click L2 Features > VLAN > VLAN Interface, as shown below:

VLAN Inter	rface Settings	Port Summary			
Port	VLAN Mode	Ingress Checking	Acceptable Frame Type		
eth1	Hybrid	Enable	Admit All	VLAN Detail	Edit
eth2	Hybrid	Enable	Admit All	VLAN Detail	Edit
eth3	Hybrid	Enable	Admit All	VLAN Detail	Edit

Parameter	Description
VLAN Mode	Select the VLAN mode option here. Options to choose from are <b>Access</b> , <b>Hybrid</b> , and <b>Trunk</b> .
Acceptable Frame	Select the acceptable frame behavior option here. Options to

	choose from are Tagged Only, Untagged Only, and Admit All.
Ingress Checking	Select this option to enable or disable the ingress checking function. When ingress checking is enabled, the packet will be dropped if the received port is not member port of the VLAN classified for the received packet.
VID	Enter the VLAN ID used for this configuration here. This value must be between 1 and 4094.
Action	Select the action that will be taken here. Options to choose from are <b>Remove</b> , <b>Tagged</b> , and <b>Untagged</b> .
Allowed VLAN Range	Enter the allowed VLAN range information here.
From Port / To Port	Select the appropriate port range used for the Clone configuration here.

Click the **Apply** button to accept the changes made.

Click the **Back** button to return to the previous window.

When **Trunk** is selected as the **VLAN Mode**, the following page will appear.

ort	eth1	Clone		
LAN Mode	Trunk	From Port	To Port	
cceptable Frame	Admit All	eth1 •	eth1 •	
gress Checking	Enabled Obisabled			
ction	All			

Figure 7-15 Configure VLAN Interface - Trunk window

The fields that can be configured are described below:

Parameter	Description
VLAN Mode	Select the VLAN mode option here. Options to choose from are <b>Access</b> , <b>Hybrid</b> , and <b>Trunk</b> .
Acceptable Frame	Select the acceptable frame behavior option here. Options to choose from are <b>Tagged Only</b> , <b>Untagged Only</b> , and <b>Admit All</b> .
Ingress Checking	Select this option to enable or disable the ingress checking function. When ingress checking is enabled, the packet will be dropped if the received port is not member port of the VLAN classified for the received packet.
Action	Select the action that will be taken here. Options to choose from are <b>Remove</b> , <b>Tagged</b> , and <b>Untagged</b> .
Allowed VLAN Range	Enter the allowed VLAN range information here.
From Port / To Port	Select the appropriate port range used for the Clone configuration here.

Click the Apply button to accept the changes made.

Click the **Back** button to return to the previous window.

**Note:** In VLAN Mode, when a port is set to access mode, this port will be untagged member of the access VLAN configured for the port.

When a port is set to hybrid mode, the port can be untagged or tagged member of all VLANs configured by the user.

When a port is set to trunk mode, this port is either tagged or untagged member port of its native VLAN and can be tagged member of other VLANs configured by the user. The purpose of a trunk port is to support the switch-to-switch connection.

## Auto Surveillance VLAN

### **Auto Surveillance Properties**

This window is used to configure the auto surveillance VLAN global settings and display the ports surveillance VLAN information.

To view the following window, click L2 Features > VLAN > Auto Surveillance VLAN > Auto Surveillance Properties, as shown below:

obal Settings		
urveillance VLAN	Enabled is Disabled	
urveillance VLAN ID (2-4094)		
urveillance VLAN CoS	5	
ging Time (1-65535)	720 min	
		Apply

Figure 7-16 Auto Surveillance Properties window

Parameter	Description
Surveillance VLAN	Select this option to enable or disable the surveillance VLAN state
Surveillance VLAN ID	Enter the surveillance VLAN ID. The range is from 2 to 4094.
Surveillance VLAN CoS	Select the priority of the surveillance VLAN from 0 to 7.
Aging Time	Enter the aging time of surveillance VLAN. The range is from 1 to 65535 minutes. The default value is 720 minutes. The aging time is used to remove a port from surveillance VLAN if the port is an automatic surveillance VLAN member. When the last surveillance device stops sending traffic and the MAC address of this surveillance device is aged out, the surveillance VLAN aging timer will be started. The port will be removed from the surveillance VLAN after expiration of surveillance VLAN aging timer. If the surveillance traffic resumes during the aging time, the aging timer will be reset and stop.

The fields that can be configured for **Global Settings** are described below:

Click the **Apply** button to accept the changes made.

### **MAC Settings and Surveillance Device**

This window is used to configure the user-defined surveillance device OUI and display the surveillance VLAN information.

To view the following window, click L2 Features > VLAN > Auto Surveillance VLAN > MAC Settings and Surveillance Device, as shown below:

User-defined MAC Settin	g Auto Surveillance VLAN Su	ummary				
To add more device(s) for Au	to Surveillance VLAN by user-defined (	configuration as below.

11	D-Link Device	IP Surveillance Device		B0-C5-54-70-00-00	FF-FF-FF-F0-00-00	Delete
12	D-Link Device	IP Surveillance Device		F0-7D-68-00-00-00	FF-FF-FF-F0-00-00	Delete

#### Figure 7-17 User -defined MAC Settings window

The fields that can be configured are described below:

Parameter	Description
Component Type	Select the surveillance component type. Options to choose from are Video Management Server, VMS Client/Remote Viewer, Video Encoder, Network Storage, and Other IP Surveillance Device.
Description	Enter the description for the user-defined OUI with a maximum of 8 characters.
MAC Address	Enter the OUI MAC address.
Mask	Enter the OUI MAC address matching bitmask.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

After clicking the Auto Surveillance VLAN Summary tab, the following page will appear.

ser-defined MAC Setting	Auto Surveillance VLAN Sur	mmary		
Entries: 0				
	Component Type	Description	MAC Address	Start Time

Figure 7-18 Auto Surveillance VLAN Summary window

# Voice VLAN

### **Voice VLAN Global**

Voice VLAN is a VLAN used to carry voice traffic from IP phone. Because the sound quality of an IP phone call will be deteriorated if the data is unevenly sent, the quality of service (QoS) for voice traffic shall be configured to ensure the transmission priority of voice packet is higher than normal traffic.

The switches determine whether a received packet is a voice packet by checking its source MAC address. If the source MAC addresses of packets comply with the organizationally unique identifier (OUI) addresses configured by the system, the packets are determined as voice packets and transmitted in voice VLAN.

To view the following window, click L2 Features > VLAN > Voice VLAN > Voice VLAN Global, as show below:

/oice VLAN Global		
Voice VLAN State	Enabled  Disabled	
Voice VLAN ID (2-4094)		
Voice VLAN CoS	5	
Aging Time (1-65535)	720 min	
		Apply

Figure 7-19 Voice VLAN Global window

The fields that can be configured are described below:

Parameter	Description
Voice VLAN State	Select this option to enable or disable the voice VLAN.
Voice VLAN ID	Enter the voice VLAN ID. The value is range from 2 to 4094.
Voice VLAN CoS	Select the priority of the voice VLAN from 0 to 7.
Aging Time	Enter the aging time of surveillance VLAN. The range is from 1 to 65535 minutes. The default value is 720 minutes. The aging time is used to remove a port from voice VLAN if the port is an automatic VLAN member. When the last voice device stops sending traffic and the MAC address of this voice device is aged out, the voice VLAN aging timer will be started. The port will be removed from the voice VLAN after expiration of voice VLAN aging timer. If the voice traffic resumes during the aging time, the aging timer will be reset and stop.

Click the Apply button to accept the changes made for each individual section.

### **Voice VLAN Port**

This window is used to configure the user-defined voice traffic's port.

To view the following window, click L2 Features > VLAN >Voice VLAN > Voice VLAN OUI, as show below:

oice VLAN Port		
From Port eth1	To Port State eth1 Disabled	Mode Auto Untagged Apply
Port	State	Mode
eth1	Disable	Auto Untagged
eth2	Disable	Auto Untagged
eth3	Disable	Auto Untagged
eth4	Disable	Auto Untagged
eth5	Disable	Auto Untagged
eth6	Disable	Auto Untagged
eth7	Disable	Auto Untagged
eth8	Disable	Auto Untagged
eth9	Disable	Auto Untagged
eth10	Disable	Auto Untagged
eth11	Disable	Auto Untagged
eth12	Disable	Auto Untagged

Figure 7-20 Voice VLAN Port window

The fields that can be configured are described below:

Parameter	Description
From Port / To Port	Select the range of ports that will be used for this configuration here.
State	Select this option to enable or disable the Voice VLAN state of the port.
Mode	Choose the Voice VLAN mode for the port. This can be <b>Auto untagged</b> , <b>Auto Tagged</b> , or <b>Manually</b> configured.

Click the **Apply** button to accept the changes made.

### Voice VLAN OUI

This window is used to configure the user-defined voice traffic's OUI. The OUI is used to identify the voice traffic. There are a number of pre-defined OUIs. The user can further define the user-defined OUIs if needed. The user-defined OUI cannot be the same as the pre-defined OUI.

To view the following window, click L2 Features > VLAN >Voice VLAN > Voice VLAN OUI, as show below:

OUI Address 00-01-E3-00-00-00	Mask FF-FF-FF-00-00-00	Description 8 chars		Apply
otal Entries: 8 OUI Address		Mask	Description	
00-01-E3-00-00-		FF-FF-00-00-00	Siemens	Delete
00-03-68-00-00-	00 FF-	FF-FF-00-00-00	Cisco	Delete
00-09-6E-00-00-	00 FF-	FF-FF-00-00-00	Avaya	Delete
00-0F-E2-00-00-	00 FF-	FF-FF-00-00-00	Hua-3COM	Delete
00-60-B9-00-00-	00 FF-	FF-FF-00-00-00	NEC/Phil	Delete
00-D0-1E-00-00-	00 FF-	FF-FF-00-00-00	Pingtel	Delete
00-E0-75-00-00-	00 FF-	FF-FF-00-00-00	Veritel	Delete

Figure 7-21 Voice VLAN OUI window

The fields that can be configured are described below:

Parameter	Description
OUI Address	Enter the OUI MAC address.
Mask	Enter the OUI MAC address matching bitmask.
Description	Enter the description for the user-defined OUI with a maximum of 8 characters.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

### **Voice VLAN Device**

This window is used to show voice devices that are connected to the ports. The start time is the time when the device is detected on this port, the activate time is the latest time saw the device sending the traffic.

To view the following window, click L2 Features > VLAN >Voice VLAN > Voice VLAN Device, as show below:

Figure 7-22 Voice VLAN Device window

# **Spanning Tree**

This Switch supports two versions of the Spanning Tree Protocol: 802.1D-1998 STP, 802.1D-2004 Rapid STP. 802.1D-1998 STP will be familiar to most networking professionals. However, since 802.1D-2004 RSTP has been recently introduced to DGS-1100 switches, a brief introduction to the technology is provided below followed by a description of how to set up 802.1D-1998 STP, 802.1D-2004 RSTP.

#### 802.1D-2004 Rapid Spanning Tree

Rapid Spanning Tree Protocol (RSTP) as defined by the IEEE 802.1D-2004 specification and a version compatible with the IEEE 802.1D-1998 STP. RSTP can operate with legacy equipment implementing IEEE 802.1D-1998; however, the advantages of using RSTP will be lost.

The IEEE 802.1D-2004 Rapid Spanning Tree Protocol (RSTP) evolved from the 802.1D-1998 STP standard. RSTP was developed in order to overcome some limitations of STP that impede the function of some recent switching innovations, in particular, certain Layer 3 functions that are increasingly handled by Ethernet switches. The basic function and much of the terminology is the same as STP. Most of the settings configured for STP are also used for RSTP. This section introduces some new Spanning Tree concepts and illustrates the main differences between the two protocols.

### Edge Port

The edge port is a configurable designation used for a port that is directly connected to a segment where a loop cannot be created. An example would be a port connected directly to a single workstation. Ports that are designated as edge ports transition to a forwarding state immediately without going through the listening and learning states. An edge port loses its status if it receives a BPDU packet, immediately becoming a normal spanning tree port.

**Note**: If Spanning Tree protocol is used, loopback detection will not be available. If Loopback Detection is enabled, the Spanning Tree protocol will not be available.

# **STP Global Settings**

This window is used to view and configure the STP global settings.

To view the following window, click L2 Features > Spanning Tree > STP Global Settings, as shown below:

Spanning Tree Global Settin	ម្លេទ		
Spanning Tree State			
Spanning Tree State	Enabled	Disabled	Apply
Spanning Tree Mode			
Spanning Tree Mode	RSTP	) STP	Apply
STP Traps			
STP New Root Trap	Enabled	Disabled	
STP Topology Change Trap	C Enabled	Disabled	Apply
Root Bridge Information			
Root Bridge	0-00:00:00:0	0:00	
Root Cost	0		
Root Maximum Age	0		
Root Forward Delay	0		
Root Port	0		

Figure 7-23 STP Global Settings window

The field that can be configured for Spanning Tree State is described below:

Parameter	Description
Spanning Tree State	Select this option to enable or disable the STP global state here.

Click the Apply button to accept the changes made.

The fields that can be configured for **Spanning Tree Mode** are described below:

Parameter	Description
Spanning Tree Mode	Select the STP mode used here. Options to choose from are <b>RSTP</b> , and <b>STP</b> .

Click the Apply button to accept the changes made.

The fields that can be configured for **STP Traps** are described below:

Parameter	Description
STP New Root Trap	Select this option to enable or disable the STP new root trap option here.
STP Topology Change Trap	Select this option to enable or disable the STP topology change trap option here.

Click the **Apply** button to accept the changes made.

# **STP Port Settings**

This window is used to view and configure the STP port settings.

To view the following window, click L2 Features > Spanning Tree > STP Port Settings, as shown below:

FP Port Settings	To Port Port Fast	
eth1 🔹	eth1  Network	Apply
Port	Port Fast	State
eth1	Edge	Link down
eth2	Edge	Link down
eth3	Edge	Link down
eth4	Edge	Link down
eth5	Edge	Link down
eth6	Edge	Link down
eth7	Edge	Link down
eth8	Edge	Link down
eth9	Edge	Link down
eth10	Edge	Link down
eth11	Edge	Link down
eth12	Edge	Link down

#### Figure 7-24 STP Port Settings window

The fields that can be configured are described below:

Parameter	Description
From Port / To Port	Select the appropriate port range used for the configuration here.
Port Fast	Select the port fast option here. Options to choose from are <b>Network</b> , <b>Disabled</b> , and <b>Edge</b> . In the <b>Network</b> mode the port will remain in the non-port-fast state for three seconds. The port will change to the port-fast state if no BPDU is received and changes to the forwarding state. If the port received the BPDU later, it will change to the non-port-fast state. In the <b>Disable</b> mode, the port will always be in the non-port-fast state. In the <b>Disable</b> mode, the port will always be in the non-port-fast state. It will always wait for the forward-time delay to change to the forwarding state. In the <b>Edge</b> mode, the port will directly change to the spanning-tree forwarding state when a link-up occurs without waiting for the forward-time delay. If the interface receives a BPDU later, its operation state changes to the non-port-fast state. By default, this option is <b>Edge</b> .

Click the **Apply** button to accept the changes made.

# **Loopback Detection**

The Loopback Detection (LBD) function is used to detect the loop created by a specific port. This feature is used to temporarily shut down a port on the Switch when a CTP (Configuration Testing Protocol) packet has been looped back to the Switch. When the Switch detects CTP packets received from a port, this signifies a loop on the network. The Switch will automatically block the port and send an alert to the administrator. The Loopback Detection port will restart (change to normal state) when the Loopback Detection Recover Time times out. The Loopback Detection function can be implemented on a range of ports at a time. The user may enable or disable this function using the drop-down menu.

To view the following window, click **L2 Features > Loopback Detection**, as shown below:

10		
pback Detection Global Settings –		
opback Detection	© Enabled

Figure 7-25 Loopback Detection window

The fields that can be configured for Loopback Detection Global Settings are described below:

Parameter	Description
Loopback Detection	Select to enable or disable loopback detection. The default is <b>Disabled</b> .
Time Interval	Set a Loop detection Interval between <i>1</i> and <i>32767</i> seconds. The default is <i>10</i> seconds.
Recover Time	Time allowed (in seconds) for recovery when a Loopback is detected. The Loop Detection Recover Time can be set at 0 seconds, or 60 to 1000000 seconds. Entering 0 will disable the Loop Detection Recover Time. The default is 60 seconds.
Loopback Detection Trap	Select to enable or disable the loopback detection trap state.

Click the **Apply** button to accept the changes made.

The fields that can be configured for Loopback Detection Port Settings are described below:

Parameter	Description
From Port / To Port	Select the appropriate port range used for the configuration here.
State	Select this option to enable or disable the state of the port.

Click the **Apply** button to accept the changes made.

**Note**: If Spanning Tree protocol is used, loopback detection will not be available. If Loopback Detection is enabled, the Spanning Tree protocol will not be available.

# Link Aggregation

### Understanding Port Trunk Groups

Port trunk groups are used to combine a number of ports together to make a single high-bandwidth data pipeline.

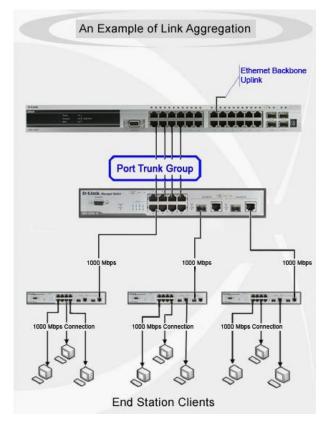

Figure 7-26 Example of Port Trunk Group

The Switch treats all ports in a trunk group as a single port. Data transmitted to a specific host (destination address) will always be transmitted over the same port in a trunk group. This allows packets in a data stream to arrive in the same order they were sent.

Link aggregation allows several ports to be grouped together and to act as a single link. This gives a bandwidth that is a multiple of a single link's bandwidth.

Link aggregation is most commonly used to link a bandwidth intensive network device or devices, such as a server, to the backbone of a network.

All of the ports in the group must be members of the same VLAN, and their STP status, static multicast, traffic control; traffic segmentation and 802.1p default priority configurations must be identical. Further, the LACP aggregated links must all be of the same speed and should be configured as full duplex.

Load balancing is automatically applied to the ports in the aggregated group, and a link failure within the group causes the network traffic to be directed to the remaining links in the group.

The Spanning Tree Protocol will treat a link aggregation group as a single link, on the switch level. On the port level, the STP will use the port parameters of the Master Port in the calculation of port cost and in determining the state of the link aggregation group. If two redundant link aggregation groups are configured on the Switch, STP will block one entire group; in the same way STP will block a single port that has a redundant link.

This window is used to view and configure the link aggregation settings.

**NOTE:** If any ports within the trunk group become disconnected, packets intended for the disconnected port will be load shared among the other linked ports of the link aggregation group.

the following window, click L2 Features > Link Aggregation, as shown below:

From Port	To Port	12 Carlos 12 Car				
	TOPOIL	Group ID (*	1-8)	Mode		
eth1	eth1 💌			On 💌	Add	Delete Member Po
ote: Each Channel Group su	pports up tp 8 mem	per ports. Up to 8 Char	nel Groups.			

Figure 7-27 Link Aggregation window

Parameter	Description
From Port / To Port	Select the appropriate port range used for the configuration here.
Group ID	Enter the channel group number here. The system will automatically create the port-channel when a physical port first joins a channel group. An interface can only join one channel-group.
Mode	Select the mode option here. Options to choose from are <b>On</b> , <b>Active</b> , and <b>Passive</b> . If the mode <b>On</b> is specified, the channel group type is static. If the mode <b>Active</b> or <b>Passive</b> is specified, the channel group type is LACP. A channel group can only consist of either static members or LACP members. Once the type of channel group has been determined, other types of interfaces cannot join the channel group.
	<b>Active</b> - Active LACP ports are capable of processing and sending LACP control frames. This allows LACP compliant devices to negotiate the aggregated link so the group may be changed dynamically as needs require. In order to utilize the ability to change an aggregated port group, that is, to add or subtract ports from the group, at least one of the participating devices must designate LACP ports as active. Both devices must support LACP.
	<b>Passive</b> - LACP ports that are designated as passive cannot initially send LACP control frames. In order to allow the linked port group to negotiate adjustments and make changes dynamically, one end of the connection must have "active" LACP ports

The fields that can be configured for Channel Group Information are described below:

Click the **Add** button to add a new entry based on the information entered.

Click the Delete Member Port button to remove the specific member port.

**NOTE:** Modules that support LACP:Port Settings, D-Link Discovery Protocol, FDB, VLAN Configuration Wizard, 8021Q VLAN, Port-based VLAN, VLAN Interface, MAC Settings and Surveillance Device, Voice VLAN Port, Voice VLAN Device, Spanning Tree, Loopback Detection, Link Aggregation, IGMP Snooping Groups Settings, LLDP Neighbor Port Information, Traffic Segmentation and Mirror Settings.

View the following window, click L2 Features > Link Aggregation>Add, as shown below:

## **L2 Multicast Control**

#### **IGMP Snooping**

Internet Group Management Protocol (IGMP) snooping allows the Switch to recognize IGMP queries and reports sent between network stations or devices and an IGMP host.

#### **IGMP Snooping Settings**

To view the following window, click L2 Features > L2 Multicast Control >IGMP Snooping > IGMP Snooping Settings, as shown below:

GMP Snooping Settings			
Global Settings			
Global State	Enabled  Disabled		Apply
VLAN Status Settings			
VID(1-4094)	Enabled  Disabled		Apply
VLAN Querier Status Settings			
VID(1-4094)	Enabled  Disabled		Apply
IGMP Snooping Table			
Total Entries: 1			
VID	VLAN Name	Status	Querier Status
1	VLAN0001	Disabled	Disabled
			1/1  < < 1 > >  Go

Figure 7-28 IGMP Snooping Settings window

The field that can be configured for Global Settings is described below:

Parameter	Description
Global State	Select this option to enable or disable IGMP snooping global state.

Click the **Apply** button to accept the changes made.

The fields that can be configured for VLAN Status Settings are described below:

Parameter	Description
VID	Enter a VLAN ID from 1 to 4094 and select to enable or disable IGMP snooping on the VLAN.

Click the Apply button to accept the changes made.

The fields that can be configured for VLAN Querier Status Settings are described below:

Parameter	Description
VID	Enter a VLAN ID from 1 to 4094 and select to enable or disable IGMP snooping on the VLAN.

Enter a page number and click the **Go** button to navigate to a specific page when multiple pages exist.

#### IGMP Snooping Groups Settings

This window is used to configure and view the IGMP snooping static group, and view IGMP snooping group.

To view the following window, click L2 Features > L2 Multicast Control >IGMP Snooping > IGMP Snooping Groups Settings, as shown below:

ID (1-4094)	Group Address	From Port eth2	To Port eth2	Apply Delete
otal Entries <mark>:</mark> 0				
VID		Groups Addres	s	Ports

Figure 7-29 IGMP Snooping Groups Settings

The fields that can be configured for IGMP Snooping Static Groups Settings are described below:

Parameter	Description
VID         Enter a VLAN ID of the multicast group.	
Group Address Enter an IP multicast group address.	
From Port / To Port	Select the appropriate port range used for the configuration here.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

#### **Multicast Filtering**

This window is used to view and configure the Layer 2 multicast filtering settings.

To view the following window, click L2 Features > L2 Multicast Control > Multicast Filtering, as shown below:

Aulticast Filtering		
Multicast Filtering		
Multicast Filtering Mode	Forward Unregistered  Filter Unregistered	Apply

Figure 7-30 Multicast Filtering window

The fields that can be configured are described below:

Parameter	Description
Multicast Filter Mode	Select the multicast filter mode here. Options to choose from are <b>Forward Unregistered</b> , and <b>Filter Unregistered</b> . When selecting the <b>Forward Unregistered</b> option, registered multicast packets will be forwarded based on the forwarding table and all unregistered multicast packets will be flooded based on the VLAN domain. When selecting the <b>Filter</b> <b>Unregistered</b> option, registered packets will be forwarded based on the forwarding table and all unregistered multicast packets will be filtered.

Click the **Apply** button to accept the changes made.

## LLDP

#### **LLDP Global Settings**

LLDP (Link Layer Discovery Protocol) provides IEEE 802.1AB standards-based method for switches to advertise themselves to neighbor devices, as well as to learn about neighbor LLDP devices.

This window is used to configure the LLDP global settings.

To view the following window, click L2 Features > LLDP > LLDP Global Settings, as shown below:

LLDP Global Settings			
LLDP Global Settings			
LLDP State	C Enabled	Disabled	
LLDP Trap State	Enabled	Disabled	Apply

Figure 7-31 LLDP Global Settings window

The fields that can be configured for LLDP Global Settings are described below:

Parameter	Description
LLDP State	Select this option to enable or disable the LLDP feature
LLDP Trap State	Select this option to enable or disable the LLDP trap state.

Click the Apply button to accept the changes made.

#### **LLDP Neighbor Port Information**

This window is used to display the information learned from the neighbors. The switch receives packets from a remote station but is able to store the information as local.

To view the following window, click L2 Features > LLDP >LLDP Neighbor Port Information, as show below:

LU	LLDP Neighbor Port Information						
- LLD	LLDP Neighbor Port Brief Table						
_							
То	Total Entries: 0						
	Entity	Chassis ID Subtype	Chassis ID	Port ID Subtype	Port ID	Port Description	

Figure 7-32 LLDP Neighbor Port Information window

# 8. Quality of Service (QoS)

802.1p Priority Port Rate Limiting

#### 802.1p Priority

This window is used to view and configure the port's default CoS settings.

To view the following window, click **QoS > 802.1p Priority**, as shown below:

From Port	To Port	Sched	luler Method					
eth1	eth1	SP	💌 🥖 W	RR: queue0:queue	1:queue2:queue3:que	eue4:queue5:queue6:	queue7=1:2:3:4:5:6:7	:8 Apply

From Port	To Port		Default CoS					
eth1	eth1		0					Apply
02.1p Priority Table								
802.1p priority	0	1	2	3	4	5	6	7
Queue Class	queue2	queue0	queue1	queue3	queue4	queue5	queue6	queue7
						~		
Port			Schedule	1500000000			Defa	lit
eth1			S	P			0	
eth2			S	P			0	
eth3			S	P			0	
eth4			S	P			0	
eth5			S	P			0	
eth6			S	P			0	
eth7			S	P			0	
eth8			S	P			0	
eth9			s	P			0	
eth10			S	Þ			0	

Figure 8-1 Port Default CoS window

The fields that can be configured for Port Scheduler Method are described below:

Parameter	Description
From Port / To Port	Select the appropriate port range used for the configuration here.
Scheduler Method	<b>SP</b> - Denoting a Strict Priority scheduling will set the highest queue to be emptied first while the other queues will follow the weighted round-robin scheduling scheme
	<b>WRR</b> - Use the weighted round-robin (WRR) algorithm to handle packets in an even distribution in priority classes of service.

Click the Apply button to accept the changes made.

The fields that can be configured Port Default CoS are described below:

Parameter	Description
From Port / To Port	Select the appropriate port range used for the configuration here.
Default CoS	Select the default CoS option for the port(s) specified here. The priorities are <b>Highest</b> , <b>High</b> , <b>Medium</b> and <b>Low</b> .

Click the **Apply** button to accept the changes made.

#### **Port Rate Limiting**

This window is used to view and configure the port rate limiting settings.

To view the following window, click **QoS > Port Rate Limiting**, as shown below:

Port Rate Limiting				
From Port eth1	To Port eth1	Direction	Rate Limit No Limit	Apply
Port		Input (Rate	b)	Output (Rate)
eth1		No Limit		No Limit
eth2		No Limit		No Limit
eth3		No Limit		No Limit
eth4		No Limit		No Limit
eth5		No Limit		No Limit
eth6		No Limit		No Limit
eth7		No Limit		No Limit
eth8		No Limit		No Limit
eth9		No Limit		No Limit
eth10		No Limit		No Limit
eth11		No Limit		No Limit
eth12		No Limit		No Limit

Figure 8-2 Port Rate Limiting window

The fields that can be configured are described below:

Parameter	Description
From Port / To Port	Select the appropriate port range used for the configuration here.
Direction	Select the direction option here. Options to choose from are <b>Input</b> and <b>Output</b> . When <b>Input</b> is selected, the rate limit for ingress packets is configured. When <b>Output</b> is selected, the rate limit for egress packets is configured.
Rate Limit	Select the rate limit value here. When <b>Direction</b> is <b>Input</b> , this drop-down menu allows you to select data rate from 16Kbps to 512Mbps. When <b>Direction</b> is <b>Output</b> , this drop-down menu allows you to select data rate from 16Kbps to 512Mbps.

Click the **Apply** button to accept the changes made.

## 9. Security

Safeguard Engine Settings Traffic Segmentation Storm Control DoS Attack Prevention Settings Zone Defense Settings SSL

## **Safeguard Engine Settings**

D-Link's Safeguard Engine is a robust and innovative technology that automatically throttles the impact of packet flooding into the switch's CPU. This function helps protect the Smart Switch from being interrupted by malicious viruses or worm attacks.

This window is used to view and configure the safeguard engine settings.

To view the following window, click **Security > Safeguard Engine Settings**, as shown below:

Safeguard Engine Settings		
Safeguard Engine Settings		
Safeguard Engine State	Disabled	Apply

Figure 9-1 Safeguard Engine Settings window

The fields that can be configured for Safeguard Engine Settings are described below:

Parameter	Description
Safeguard Engine State	Select to enable or disable the safeguard engine feature here.

#### **Traffic Segmentation**

This window is used to view and configure the traffic segmentation settings. When the traffic segmentation forwarding domain is specified, packets received by the port will be restricted in Layer 2 packet forwarding to interfaces within the domain. When the forwarding domain of a port is empty, Layer 2 forwarding for packets received by the port is not restricted.

To view the following window, click **Security > Traffic Segmentation**, as shown below:

affic Segmentation S	ettings				
From Port	To Port	From Forward Port	To Forward Port		
eth2	eth2	eth2	eth2	Add Delete	
Ĩ	Port		Forwarding Domain		
9	eth2		eth1-eth24		
	eth3		eth1-eth24		
eth4		eth1-eth24			
	eth5		eth1-eth24		
I	eth6		eth1-eth24		
ł	eth7		eth1-eth24		
0	eth8		eth1-eth24		
	eth9		eth1-eth24		
e	eth10		eth1-eth24		
e	eth11		eth1-eth24		
e	eth12		eth1-eth24		

Figure 9-2 Traffic Segmentation Settings window

The fields that can be configured are described below:

Parameter	Description
From Port / To Port	Select the receiving port range used for the configuration here.
From Forward Port / To Forward Port	Select the forward port range used for the configuration here.

Click the Add button to add a new entry based on the information entered.

Click the **Delete** button to remove an entry based on the information entered.

## **Storm Control**

This window is used to view and configure the storm control settings. Once a packet storm has been detected, the Switch will drop packets coming into the Switch until the storm has subsided.

To view the following window, click **Security > Storm Control**, as shown below:

torm Control Settings					
From Port eth1	To Port eth1	Type None	Rate Limit  No Limit	C	Apply
Port		Туре		Rate	
eth1		None		No Limit	
eth2		None		No Limit	
eth3		None		No Limit	
eth4		None		No Limit	
eth5		None		No Limit	
eth6		None		No Limit	
eth7		None		No Limit	
eth8		None		No Limit	
eth9		None		No Limit	
eth10		None		No Limit	
eth11		None		No Limit	
eth12		None		No Limit	

#### Figure 9-3 Storm Control window

The fields that can be configured for Storm Control Port Settings are described below:

Parameter	Description
From Port / To Port	Select the appropriate port range used for the configuration here.
Туре	Select the type of storm attack that will be controlled here. Options to choose from are <b>Broadcast</b> , <b>Multicast</b> , and <b>Unicast</b> .
Rate Limit	Select a data rate from 16Kbps to 512Mbps.

Click the Apply button to accept the changes made.

#### **DoS Attack Prevention Settings**

This window is used to view and configure the Denial-of-Service (DoS) attack prevention settings. The following well-known DoS types which can be detected by most switches:

- Land Attack: This type of attack involves IP packets where the source and destination address are set to the address of the target device. It may cause the target device to reply to itself continuously.
- **Blat Attack**: This type of attack will send packets with the TCP/UDP source port equal to the destination port of the target device. It may cause the target device to respond to itself.
- **TCP-Null:** This type of attack involves port scanning by using specific packets which contain a sequence number of 0 and no flags.
- **TCP-Xmas:** This type of attack involves port scanning by using specific packets which contain a sequence number of 0 and the Urgent (URG), Push (PSH), and FIN flags.
- **TCP SYN-FIN:** This type of attack involves port scanning by using specific packets which contain SYN and FIN flags.
- TCP SYN SrcPort Less 1024: This type of attack involves port scanning by using specific packets which contain source port 0 to 1023 and SYN flag.
- **Ping of Death Attack:** A ping of death is a type of attack on a computer that involves sending a malformed or otherwise a malicious ping to a computer. A ping is normally 64 bytes in size (many computers cannot handle a ping larger than the maximum IP packet size) which is 65535 bytes. The sending of a ping of this size can crash the target computer. Traditionally, this bug has been relatively easy to exploit. Generally, sending a 65536 byte ping packet is illegal according to networking protocol, but a packet of such a size can be sent if it is fragmented; when the target computer reassembles the packet, a buffer overflow can occur, which often causes a system crash.
- All Types: All of above types.

To view the following window, click **Security > DoS Attack Prevention Settings**, as shown below:

S Attack Prevention Settings				
OoS Type Selection

Disabled  Drop DoS Type Land Attack Biat Attack TCP Null Scan TCP Xmascan		Disabled Disabled Disabled Disabled	Drop Drop Drop Drop Drop	Apply

Figure 9-4 DoS Attack Prevention Settings window

The fields that can be configured for DoS Attack Prevention Settings are described below:

Parameter	Description
DoS Type Selection	Tick the DoS type option that will be prevented here.
State	Select to enable or disable the DoS attack prevention feature's global state here.
Action	Select the action that will be taken when the DoS attack was detected here. The only option to select here is <b>Drop</b> .

Click the Apply button to accept the changes made.

#### **Zone Defense Settings**

This window is used to view and configure the Zone Defense setting.

To view the following window, click **Security > Zone Defense Settings**, as shown below:

one Defense Settings		
Zone Defense State	Enabled     Disabled	Apply

Figure 9-5 Zone Defense Settings window

The fields that can be configured for **Zone Defense Settings** are described below:

Parameter	Description
State	Select to enable or disable the Zone Defense feature's global state here.

Click the **Apply** button to accept the changes made.

#### SSL

Secure Sockets Layer (SSL) is a security feature that will provide a secure communication path between a host and client through the use of authentication, digital signatures and encryption.

#### **SSL Global Settings**

This window is used to view and configure the SSL feature's global settings.

To view the following window, click Security > SSL > SSL Global Settings, as shown below:

SL Global Settings		
SSL State	Enabled   Disabled	Apply
ograde Certificate and key		
Key	浏览	Apply
Certificate	浏览	Apply

Figure 9-6 SSL Global Settings window

The fields that can be configured for SSL Global Settings are described below:

Parameter	Description
SSL Status	Select to enable or disable the SSL feature's global status here.

Click the **Apply** button to accept the changes made.

The fields that can be configured for Upgrade Certificate and key are described below:

Parameter	Description
-----------	-------------

Кеу	Upgrade the key
Certificate	Upgrade the Certificate

Click the **Apply** button to accept the changes made.

## 10. OAM

**Cable Diagnostics** 

## **Cable Diagnostics**

The cable diagnostics feature is designed primarily for administrators or customer service representatives to verify and test copper cables; it can rapidly determine the quality of the cables and the types of error.

To view the following window, click **OAM > Cable Diagnostics**, as shown below:

ole Diagnostics	To Port				
eth 1	eth1				Test
					Clear A
Port	Туре	Link Status	Test Result	Cable Length (M)	Clear A
eth1	1000BASET	Link down	*	-	Clear
eth2	1000BASET	Link down			Clear
eth3	1000BASET	Link down	*	-	Clear
eth4	1000BASET	Link down	-	-	Clear
eth5	1000BASET	Link down		-	Clear
eth6	1000BASET	Link down	ē.	-	Clear
eth7	1000BASET	Link down	2	2	Clear

eth12	1000BASET	Link down			Clear

Figure 10-1 Cable Diagnostics window

The fields that can be configured are described below:

Parameter	Description
From Port / To Port	Select the appropriate port range used for the configuration here.

Click the **Test** button to test the specific port.

Click the Clear button to clear all the information for the specific port.

Click the **Clear All** button to clear all the information in this table.

**Note**: The Cable Diagnostics feature is only supported on the copper ports on all DGS-1100 Series switches. Please be sure that Power Saving feature is disabled before enabling Cable Diagnostics function.

Test Result: The description of the cable diagnostic results.

• OK means the cable is good for the connection. Short in Cable means the wires of the RJ45 cable may be in contact somewhere.

• Open in Cable means the wires of RJ45 cable may be broken, or the other end of the cable is simply disconnected.

• Cable Fault Distance (meters): Indicates the distance of the cable fault from the Switch port, if the cable is less than 1 meters, it will show "0".

• Cable Length (meter): If the test result is OK and the cable length is less than 15M, then "<15M" will be displayed. If the test result is OK and the cable length is more than 15M and less than 200m, then the cable length will be represented by the total cable length.

# **11.** Monitoring

Statistics Mirror Settings

#### **Statistics**

#### **Port Counters**

This window is used to display port counter statistics.

To view the following window, click **Monitoring > Statistics > Port Counters**, as show below:

t Counters

eth8	0	0	0	0
eth9	0	0	0	0
eth10	0	0	0	0
eth11	0	0	0	0
eth12	0	0	0	0

Figure 11-1 Port Counters window

The fields that can be configured are described below:

Parameter	Description
From Port / To Port	Select the appropriate port range used for the configuration here.

TxOK: Number of packets transmitted successfully.

RxOK: Number of packets received successfully.

TxError: Number of transmitted packets resulting in error.

**RxError**: Number of received packets resulting in error

Click the Find button to locate a specific entry based on the information entered.

Click the **Refresh** button to refresh the display table.

Click the Clear button to clear all the information for the specific port.

Click the **Clear All** button to clear all the information in this table.

## **Mirror Settings**

This window is used to view and configure the mirror feature's settings. The Switch allows users to copy frames transmitted and received on a port and redirect the copies to another port. Attach a monitoring device to the mirroring port, such as a sniffer, to view details about the packets passing through the first port. This is useful for network monitoring and troubleshooting purposes.

To view the following window, click **Monitoring > Mirror Settings**, as shown below:

Mirror Settings					
Mirror Settings					
Destination Source	Port eth2 From Port eth2	To Port eth2	Frame Type       RX		
				Apply Delete	
Mirror Session Table					
D-#	Source Ports	TY		Destination port	
Both	RX	ТХ			

Figure 11-2 Mirror Settings window

The fields that can be configured for **Mirror Settings** are described below:

Parameter	Description
Destination	Select one destination port from drop-down menu.
Source	Select <b>From Port</b> number and the <b>To Port</b> number as source port from drop-down menu. Lastly select the <b>Frame</b> <b>Type</b> option. Options to choose from as the <b>Frame Type</b> are <b>Both</b> , <b>RX</b> , and <b>TX</b> . When selecting Both, traffic in both the incoming and outgoing directions will be mirrored. When selecting <b>RX</b> , traffic in only the incoming direction will be mirrored. When selecting <b>TX</b> , traffic in only the outgoing direction will be mirrored.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to delete an existing mirror entry based on the information entered.

## 12. Green

Power Saving EEE

#### **Power Saving**

This window is used to configure the power saving settings of the Switch.

To view the following window, click Green > Power Saving, as shown below:

Function Version     3.0       Link Detection Power Saving     Enabled       Scheduled Port-shutdown Power Saving     Enabled       Scheduled Hibernation Power Saving     Enabled       Scheduled Dim-LED Power Saving     Enabled       Scheduled Dim-LED Power Saving     Enabled	ower Saving Global Settings	Power Saving Shutdown Settings			
Scheduled Port-shutdown Power Saving <ul> <li>Enabled</li> <li>Disabled</li> <li>Scheduled Hibernation Power Saving</li> <li>Enabled</li> <li>Disabled</li> </ul>	nction Version	3.0

Figure 12-1 Power Saving window

Parameter	Description
Link Detection Power Saving	Select this option to enable or disable the link detection state. When enabled, a port which has a link down status will be turned off to save power to the Switch. This will not affect the port's capabilities when the port status is link up.
Scheduled Port-shutdown Power Saving	Select this option to enable or disable applying the power saving by scheduled port shutdown.
Scheduled Hibernation Power Saving	Select this option to enable or disable applying the power saving by scheduled hibernation power.
Scheduled Dim-LED Power Saving	Select this option to enable or disable applying the power saving by scheduled dimming LED's.
Administrative Dim-LED	Select this option to enable or disable the port LED function.
Туре	Select the type of power saving. Option to choose from is <b>Dim-LED</b> or <b>Hibernation</b> .
Time Profile	If a Time Profile was previously created, select the desired profile from the drop-down list.

The fields that can be configured are described below:

Click the Apply button to accept the changes made for each individual section.

Click the **Delete** button to remove the specified entry.

After clicking the **Power Saving Shutdown Settings** tab, the following page will appear.

Power Savi	ing Global Settings	Power Saving Shutdown Setting	IS	
From Port		To Port	Time Profile	
eth1		eth1	None	Apply
Total Entries	s: 24			
	Port		Time Profile	
	eth1			Delete
	eth2			Delete
	eth3			Delete
	eth4			Delete
	eth5			Delete
	eth6			Delete
	eth7			Delete
	eth8			Delete
	eth9			Delete
	eth10			Delete
	eth11			Delete
	eth12			Delete

#### Figure 12-2 Power Saving Shutdown Settings window

The fields that can be configured are described below:

Parameter	Description
From Port / To Port	Select the appropriate port range used for the configuration here.
Time Range	If a Time Profile was previously created, select the desired profile from the drop-down list.

Click the **Apply** button to accept the changes made.

Click the **Delete** button to remove the specified entry.

#### EEE

Energy Efficient Ethernet (EEE) is defined in IEEE 802.3az. It is designed to reduce the energy consumption of a link when no packets are being sent.

To view the following window, click **Green > EEE**, as shown below:

EEE Settings From Port eth1	To Port eth1	State Disabled •
	Port	State
	eth1	Disabled
	eth2	Disabled
	eth3	Disabled
	eth4	Disabled
	eth5	Disabled
	eth6	Disabled
	eth7	Disabled
	eth8	Disabled
	eth9	Disabled
	eth10	Disabled
	eth11	Disabled
	eth12	Disabled

Figure 12-3 EEE window

The fields that can be configured are described below:

Parameter	Description
From Port / To Port	Select the appropriate port range used for the configuration here.
State	Select this option to enable or disable the state of this feature here.

Click the **Apply** button to accept the changes made.

Note: The EEE feature is only supported on the copper ports on all DGS-1100 Series switches.

#### **13. Save and Tools**

Save Configuration Firmware Information Firmware Upgrade & Backup Configuration Restore & Backup Log Backup Ping Reset Reboot System

#### **Save Configuration**

This window is used to save the running configuration to the start-up configuration of the Switch. This is to prevent the loss of configuration in the event of a power failure.

To view the following window, click Save > Save Configuration, as shown below:

Save Configuration	
Save Configuration	
Please press the "Apply" button to save system settings to flash.	Apply

Figure 13-1 Save Configuration window

Click the Apply button to save the configuration to the switch's flash memory.

#### **Firmware Information**

This window is used to show firmware information.

To view the following window, click **Tools > Firmware Information**, as shown below:

Image ID	Version	Size (B)	Update Time	
*1c	Ver1.00.009	3151733	2000-01-01 00:02:58	Boot UP
2	Ver1.00.009	3151733	2000-01-01 00:02:55	Boot UP

Figure 13-2 Firmware Information window

**Boot Up:** Clicking the **Boot Up** button will set that firmware image as the active image to use upon the next system start up.

**Note**: Changing the firmware only happens after the switch has been manually rebooted. In order to boot with the newly selected firmware, make sure that the switch is rebooted.

#### **Firmware Upgrade & Backup**

**Note:** When upgrading the firmware on the DGS-1100 Series switch, only the image not currently active can be upgraded. All DGS-1100 Series switches come with two images, however only one can be active at any time. (e.g. If image 1 is currently in use, only image 2 can be upgraded, and vice versa.)

**Note**: If the switch is in HTTPS mode, the firmware or configuration cannot be upgraded using regular HTTP.

#### Firmware Upgrade from TFTP

This window is used to initiate a firmware upgrade from a TFTP server.

To view the following window, click **Tools > Firmware Upgrade & Backup > firmware Upgrade from TFTP**, as shown below:

Firmware Upgrade fro	m TFTP	
TFTP Server IP	24 49 94	
Source File	64 chars	
Destination	Image 2	
		Upgrade

Figure 13-3 Firmware Upgrade from TFTP window

The fields that can be configured are described below:

Parameter	Description
TFTP Server IP	Enter the TFTP server's IPv4 address here.
Source File	Enter the source filename and path of the firmware file located on the TFTP server here.

Click the **Upgrade** button to initiate the firmware upgrade.

#### **Firmware Upgrade from HTTP**

This window is used to initiate a firmware upgrade from a local PC using HTTP.

To view the following window, click **Tools > Firmware Upgrade & Backup > Firmware Upgrade from HTTP**, as shown below:

Firmware Upgrade from HTTP						
Source File		刘览				
Destination	Image 2					
		(	Upgrade			

Figure 13-4 Firmware Upgrade from HTTP window

The fields that can be configured are described below:

Parameter	Description
Source File	Enter the source filename and path of the firmware file located on the local PC. Alternatively click the <b>Browse</b> button to navigate to the location of the firmware file located on the local PC.

Click the **Upgrade** button to initiate the firmware upgrade.

#### **Firmware Backup to HTTP**

This window is used to initiate a firmware backup to a local PC using HTTP.

To view the following window, click **Tools > Firmware Upgrade & Backup > Firmware Backup to HTTP**, as shown below:

Firmware Backup to HTTP					
Source	Image1				
		Backup			

Figure 13-5 Firmware Backup to HTTP window

The fields that can be configured are described below:

Parameter	Description
Source	Select the source image to use for the firmware backup.

Click the **Backup** button to initiate the firmware backup.

**Note**: Firmware backup need to wait around  $40 \sim 50$  seconds when pushing Backup button due to encrypt firmware. It will take more time when accessing switch via HTTPS

#### **Firmware Backup to TFTP**

This window is used to initiate a firmware backup to a TFTP server.

To view the following window, click **Tools > Firmware Upgrade & Backup > Firmware Backup to TFTP**, as shown below:

irmware Backup to T	FTP	
TFTP Server IP Source	Image1	
Destination File	64 chars	
		Backup

Figure 13-6 Firmware Backup to TFTP window

The fields that can be configured are described below:

Parameter	Description		
TFTP Server IP	Enter the TFTP server's IPv4 address here.		
Source	Select the source image to use for the firmware backup.		
Destination File	Enter the destination path and location where the firmware file should be stored on the TFTP server.		

Click the **Backup** button to initiate the firmware backup.

## **Configuration Restore & Backup**

#### **Configuration Restore from HTTP**

This window is used to initiate a configuration restore from a local PC using HTTP.

**Note**: If the switch is in HTTPS mode, the firmware or configuration cannot be upgraded using regular HTTP.

To view the following window, click **Tools > Configuration Restore & Backup > Configuration Restore from HTTP**, as shown below:

Configuration Restore from HTTP				
Source File 浏览				
Effective immediately (running-config)     Take effect after the next boot (startup-config)     Restore				

Figure 13-7 Configuration Restore from HTTP window

The fields that can be configured are described below:

Parameter	Description
Source File	Enter the source filename and path of the configuration file located on the local PC. Alternatively click the <b>Browse</b> button to navigate to the location of the configuration file located on the local PC.

Click the **Restore** button to initiate the configuration restore.

Click **Effective immediately (running-config)** to have the uploaded configuration loaded immediately.

Click **Take effect after the next boot (startup-config)** to load the configuration after the switch has been rebooted.

#### **Configuration Restore from TFTP**

This window is used to initiate a configuration restore from a TFTP server.

To view the following window, click **Tools > Configuration Restore & Backup > Configuration Restore from TFTP**, as shown below:

Configuration Restore from TFTP						
TFTP Server IP						
Source File	64 chars					
Effective immediately (running-config)     Take effect after the next boot (startup-config)     Restore						

Figure 13-8 Configuration Restore from TFTP window

The fields that can be configured are described below:

Parameter	Description		
TFTP Server IP	Enter the TFTP server's IPv4 address here.		
Source File	Enter the source filename and path of the configuration file located on the TFTP server here.		

Click the **Restore** button to initiate the configuration restore.

Click **Effective immediately (running-config)** to have the uploaded configuration loaded immediately.

Click **Take effect after the next boot (startup-config)** to load the configuration after the switch has been rebooted.

#### **Configuration Backup to HTTP**

This window is used to initiate a configuration file backup to a local PC using HTTP.

To view the following window, click **Tools > Configuration Restore & Backup > Configuration Backup to HTTP**, as shown below:

Configuration Backup to	Configuration Backup to HTTP					
Include Username Password	Exclude Username Password     Backup					

Figure 13-9 Configuration Backup to HTTP window

Select **Include Username Password** to save the switch user accounts and passwords to the backup file.

Select **Exclude username password** to save the switch user accounts and passwords to the backup file.

Click the **Backup** button to initiate the configuration file backup.

#### **Configuration Backup to TFTP**

This window is used to initiate a configuration file backup to a TFTP server.

To view the following window, click **Tools > Configuration Restore & Backup > Configuration Backup to TFTP**, as shown below:

Configuration Backup to TFTP						
TFTP Server IP						
Destination File	64 chars					
Include Username F	assword 💿 Exclude Username Password	rd				
		ſ	Backup			

#### Figure 13-10 Configuration Backup to TFTP window

The fields that can be configured are described below:

Parameter	Description	
TFTP Server IP	Enter the TFTP server's IPv4 address here.	
Destination File	Enter the destination path and location where the configuration file should be stored on the TFTP server.	

Select **Include Username Password** to save the switch user accounts and passwords to the backup file.

Select **Exclude Username Password** to save the switch user accounts and passwords to the backup file.

Click the **Backup** button to initiate the configuration file backup.

## Log Backup

#### Log Backup to HTTP

This window is used to initiate a system log backup to a local PC using HTTP.

To view the following window, click **Tools > Log Backup > Log Backup to HTTP**, as shown below:

Figure 13-11 Log Backup to HTTP window

Click the **Backup** button to initiate the system log backup.

#### Log Backup to TFTP

Log

This window is used to initiate a system log backup to a TFTP server.

To view the following window, click **Tools > Log Backup > Log Backup to TFTP**, as shown below:

Log Backup to TF1	Р		
TFTP Server IP Destination File	64 chars	Backup	

Figure 13-12 Log Backup to TFTP window

The fields that can be configured are described below:

Parameter	Description	
TFTP Server IP	Enter the TFTP server's IPv4 address here.	
Destination File	Enter the destination path and location where the configuration file should be stored on the TFTP server	

Click the **Backup** button to initiate the system log backup.

## Ping

Ping is a small program that sends ICMP Echo packets to the IP address you specify. The destination node then responds to or "echoes" the packets sent from the Switch. This is very useful to verify connectivity between the Switch and other nodes on the network.

To view the following window, click **Tools > Ping**, as shown below:

Infinite	
4 sec	
	Start
	4sec

Figure 13-13 Ping window

The fields that can be configured for IPv4 Ping are described below:

Parameter	Description	
Target IPv4 Address	Select and enter an IP address to be pinged.	
Ping Times	Enter the number of times desired to attempt to Ping the IPv4 address configured in this window. Users may enter a number of times between 1 and 255. Tick the <b>Infinite</b> check box to keep sending ICMP Echo packets to the specified IP address until the program is stopped.	
Timeout	Select a timeout period between 1 and 99 seconds for this Ping message to reach its destination. If the packet fails to find the IP address in this specified time, the Ping packet will be dropped.	

After clicking the **Start** button in **IPv4 Ping** section, the following **IPv4 Ping Result** section will appear:

4 Ping	Result	
1] 2] 3]	Request timed out. Request timed out. Request timed out.	×
s	top Back	

Figure 13-14 Ping - IPv4 Ping Result window

Click the Stop button to halt the Ping Test.

Click the **Back** button to return to the IPv4 Ping section.

#### Reset

This window is used to reset the Switch's configuration to the factory default settings.

To view the following window, click **Tools > Reset**, as shown below:

Reset	
Reset	
The Switch will be reset to its factory defaults including IP address, and then will save, reboot.	
The Switch will be reset to its factory defaults except IP address, and then will save, reboot.	
○ The Switch will be reset to its factory defaults including IP address.	Apply

Figure 13-15 Reset window

Select **The Switch will be reset to its factory defaults including IP address, and the will save, reboot** option to reset the Switch's configuration to its factory default settings.

Select **The Switch will be reset to its factory default except IP address, and then will save, reboot** option to reset the Switch's configuration to its factory default settings. This option will exclude the IP address from being changed.

Select **The Switch will be reset to its factory defaults including IP address** option to reset the Switch's configuration to its factory default settings.

Click the **Apply** button to initiate the factory default reset and reboot the Switch.

## **Reboot System**

This window is used to reboot the Switch and alternatively save the configuration before doing so. To view the following window, click **Tools > Reboot System**, as shown below:

Figure 13-16 Reboot System window

When rebooting the Switch, any configuration changes that was made during this session, will be lost unless the **Yes** option is selected when asked to save the settings.

Click the **Reboot** button to alternatively save the settings and reboot the Switch.

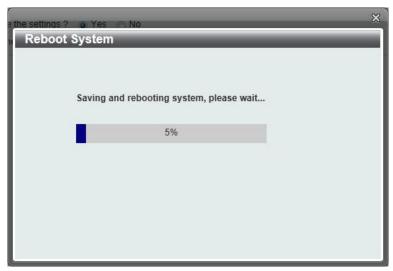

Figure 13-17 Reboot System - Rebooting window

## **14. Appendix A - Ethernet Technology**

This chapter will describe the features of the D-Link DGS-1100 Series Switch and provide some background information about Ethernet/Fast Ethernet/Gigabit Ethernet switching technology.

#### **Gigabit Ethernet Technology**

Gigabit Ethernet is an extension of IEEE 802.3 Ethernet utilizing the same packet structure, format, and support for CSMA/CD protocol, full duplex, and management objects, but with a tenfold increase in theoretical throughput of over 100-Mbps Fast Ethernet and a hundredfold increase over 10-Mbps Ethernet. Since it is compatible with all 10-Mbps and 100-Mbps Ethernet environments, Gigabit Ethernet provides a straightforward upgrade without wasting existing investments in hardware, software, or trained personnel.

The increased speed and extra bandwidth offered by Gigabit Ethernet is essential to help solving network bottlenecks that frequently develop as more advanced computer users and newer applications continue to demand greater network resources. Upgrading key components, such as backbone connections and servers to Gigabit Ethernet technology can greatly improve network response times as well as significantly speed up the traffic between subnets.

Gigabit Ethernet enables fast optical fiber connections to support video conferencing, complex imaging, and similar data-intensive applications. Likewise, since data transfers occur 10 times faster than Fast Ethernet, servers outfitted with Gigabit Ethernet NIC's are able to perform 10 times the number of operations in the same amount of time.

In addition, the phenomenal bandwidth delivered by Gigabit Ethernet is the most cost-effective method to take advantage of today and tomorrow's rapidly improving switching and routing internetworking technologies. And with expected advances in the coming years in silicon technology and digital signal processing that will enable Gigabit Ethernet to eventually operate over unshielded twisted-pair (UTP) cabling, outfitting your network with a powerful 1000-Mbps-capable backbone/server connection which will create a flexible foundation for the next generation of network technology products.

## **Fast Ethernet Technology**

The growing importance of LANs and the increasing complexity of desktop computing applications are fueling the need for high performance networks. A number of high-speed LAN technologies have been proposed to provide greater bandwidth and improve client/server response times. Among them, 100BASE-T (Fast Ethernet) provides a non-disruptive, smooth evolution from the current 10BASE-T technology. The non-disruptive and smooth evolution nature, and the dominating potential market base, virtually guarantees cost-effective and high-performance Fast Ethernet solutions.

100Mbps Fast Ethernet is a standard specified by the IEEE 802.3 LAN committee. It is an extension of the 10Mbps Ethernet standard with the ability to transmit and receive data at 100Mbps, while maintaining the CSMA/CD Ethernet protocol. Since the 100Mbps Fast Ethernet is compatible with all other 10Mbps Ethernet environments, it provides a straightforward upgrade and utilizes existing investments in hardware, software, and personnel training.

#### **Switching Technology**

Another approach to push beyond the limits of Ethernet technology is the development of switching technology. A switch bridges Ethernet packets at the MAC address level of the Ethernet protocol transmitting among connected Ethernet or Fast Ethernet LAN segments.

Switching is a cost-effective way of increasing the total network capacity available to users on a local area network. A switch increases capacity and decreases network loading by dividing a local area network into different segments which won't compete with each other for network transmission capacity.

The switch acts as a high-speed selective bridge between the individual segments. The switch, without interfering with any other segments, automatically forwards traffic that needs to go from one segment to another. By doing this the total network capacity is multiplied, while still maintaining the same network cabling and adapter cards.

# **15. Appendix B - Technical Specifications**

## Hardware Specifications

#### Key Components / Performance

#### Switching Capacity:

- DGS-1100-16V2 : 32Gbps
- DGS-1100-24V2 : 48Gbps
- DGS-1100-24PV2 : 48Gbps
- DGS-1100-10MPV2 : 20Gbps
- DGS-1100-10MPPV2 : 20Gbps
- DGS-1100-26MPV2 : 52Gbps
- DGS-1100-26MPPV2 : 52Gbps
- DGS-1100-18PV2 : 36Gbps
- Max. Forwarding Rate:
  - DGS-1100-16V2 : 23.81Mpps
  - DGS-1100-24V2 : 35.71Mpps
  - DGS-1100-24PV2 : 35.71Mpps
  - DGS-1100-10MPV2 : 14.88Mpps
  - DGS-1100-10MPPV2 : 14.88Mpps
  - DGS-1100-26MPV2 : 38.69Mpps
  - DGS-1100-26MPPV2 : 38.69Mpps
  - DGS-1100-18PV2 : 26.784Mpps
- Forwarding Mode: Store and Forward
- Packet Buffer memory:
  - DGS-1100-16V2 : 4.1M bit
  - DGS-1100-24V2 : 4.1M bit
  - DGS-1100-24PV2 : 4.1M bit
  - DGS-1100-10MPV2 : 4.1M bit - DGS-1100-10MPPV2 : 4.1M bit
  - DGS-1100-26MPV2 : 4.1M bit
  - DGS-1100-26MPPV2 : 4.1M bit
  - DGS-1100-18PV2 : 4.1M bit
- Flash Memory: 16M Byte

#### **Port Functions**

- 10/100/1000BaseTX ports compliant with the following standards:
  - IEEE 802.3compliance
  - IEEE 802.3ucompliance
  - IEEE 802.3ab compliance

-IEEE802.3at (Only DGS-1100-24PV2 、 DGS-1100-10MPV2/

10MPPV2/26MPV2/26MPPV2/18PV2)

-IEEE802.3bt(OnlyDGS-1100-10MPPV2 /26MPPV2)

-Supports Full/half-Duplex operations at 10/100Mbps

-Supports Full-Duplex operation at 1000Mbps

-Supports IEEE 802.3x Flow Control -Support Auto-Negotiation

-Compliant to IEEE 802.3az Energy Efficiency Ethernet.

# Physical & Environment

- DGS-1100-xxV2 : AC input, 100~240 VAC, 50/60Hz, internal universal power supply
- Operation Temperature: -5~50°C
- Storage Temperature: -40~70°C
- Dperation Humidity: 0%~95% RH
- Storage Humidity: 0%~95% RH

#### **Emission (EMI) Certifications**

- FCC class A
- CE Class A
- VCCI Class A
- BSMI

#### **Safety Certifications**

- UL, LVD, CB, BSMI
- CCC for DGS-1100-16V2/24V2/26PV2 only

#### **Features**

#### **L2 Features**

- DGS-1100-xxV2: 8K MAC address.
- Loopback Detection

- Port Mirroring
- Link Aggregation
- Cable Diagnostics
- Spanning Tree

#### **L2** Multicasting

IGMP Snooping

#### VLAN

- 802.1Q VLAN standard
- Port-Based VLAN
- Surveillance VLAN
- Voice VLAN:
- Asymmetric VLAN

# QoS (Quality of Service)

- 802.1p priority,
- 8 queues
- Bandwidth Control

#### Security

- Storm Control
- DoS Attack Prevention
- SSL SSL
- D-Link Safeguard

#### Management

- Web-based GUI or D-Link Network Assistant
- Configuration backup/restoration via Webbased management
- Firmware backup & upgrade via Webbased management
- Reset, Reboot system
- Factory reset by pressing reset button
- SNMP, LLDP, Dual Image, 2 level user account, SNTP

#### **Power Saving**

- IEEE 802.3az Compliant (Energy Efficient Ethernet)
- D-Link Green Technologies
- Power saving by link status
- Power Saving by LED Shut-Off:
- Power Saving by Port Shut-Off
- Power Saving by System Hibernation

## **16. Appendix C – Rack mount Instructions**

Safety Instructions - Rack Mount Instructions - The following or similar rack-mount instructions are included with the installation instructions:

A) Elevated Operating Ambient - If installed in a closed or multi-unit rack assembly, the operating ambient temperature of the rack environment may be greater than room ambient. Therefore, consideration should be given to installing the equipment in an environment compatible with the maximum ambient temperature (Tma) specified by the manufacturer.

B) Reduced Air Flow - Installation of the equipment in a rack should be such that the amount of air flow required for safe operation of the equipment is not compromised.

C) Mechanical Loading - Mounting of the equipment in the rack should be such that a hazardous condition is not achieved due to uneven mechanical loading.

D) Circuit Overloading - Consideration should be given to the connection of the equipment to the supply circuit and the effect that overloading of the circuits might have on overcurrent protection and supply wiring. Appropriate consideration of equipment nameplate ratings should be used when addressing this concern.

E) Reliable Earthing - Reliable earthing of rack-mounted equipment should be maintained. Particular attention should be given to supply connections other than direct connections to the branch circuit (e.g. use of power strips)

# **17. Appendix D-Trap Messages**

The following table lists all possible trap log entries and their corresponding meanings that will appear in the Switch.

	1	
Trap Name	OID	Description
newRoot	1.3.6.1.2.1.17.0.1	The trap is sent by a bridge soon after its election as the new root.
topologyChange	1.3.6.1.2.1.17.0.2	The trap is sent by a bridge when any of its configured ports transitions from the Learning state to the Forwarding state, or from the Forwarding state to the Blocking state.
coldStart	1.3.6.1.6.3.1.1.5.1	The trap is sent when the system coldStart.
warmStart	1.3.6.1.6.3.1.1.5.2	The trap is sent when the system warm start.
linkDown	1.3.6.1.6.3.1.1.5.3	The trap is sent by a bridge when an interface is link down.
		Binding objects:
		(1) ifIndex
		(2) ifAdminStatus
		(3) ifOperStatus
linkUp	1.3.6.1.6.3.1.1.5.4	The trap is sent by a bridge when an interface is link up.
		Binding objects:
		(1) ifIndex
		(2) ifAdminStatus
		(3) ifOperStatus
authenticationFailu re	1.3.6.1.6.3.1.1.5.5	The trap is sent when the community isn't acceptable.
lldpRemTablesCha nge	1.0.8802.1.1.2.0.0. 1	A lldpRemTablesChange notification is sent when the value of lldpStatsRemTableLastChangeTime changes.
		Binding objects:
		(1) IldpStatsRemTablesInserts
		(2) IldpStatsRemTablesDeletes
		(3) IldpStatsRemTablesDrops
		(4) IldpStatsRemTablesAgeouts
pethPsePortOnOff Notification	1.3.6.1.2.1.105.0.1	This Notification indicates if Pse Port is delivering ornot power to the PD.
		Binding objects:
		(1) pethPsePortDetectionStatus
pethMainPowerUs	1.3.6.1.2.1.105.0.2	This Notification indicate PSE Threshold

ageOnNotification		usageindication is on, the usage power is above thethreshold. Binding objects:
		(1) pethMainPseConsumptionPower
pethMainPowerUs ageOffNotification	1.3.6.1.2.1.105.0.3	This Notification indicates PSE Threshold usage indicationoff, the usage power is below the threshold. Binding objects:
		(1) pethMainPseConsumptionPower
v1LbdLoopOccurre d	1.3.6.1.4.1.171.11. 170.1000.7.0.1	This trap is sent when an interface loop occurs. Binding objects: (1) v1LbdNotifyInfolfIndex
v1LbdLoopRecove ry	1.3.6.1.4.1.171.11. 170.1000.7.0.2	This trap is sent when an interface loop recovery. Binding objects: (1) v1LbdNotifyInfoIfIndex
v1LldpExtDatabas eChanged	1.3.6.1.4.1.171.11. 170.1000.8.0.1	This trap is sent when LLDP database changed.
v1PoeIfPdAliveFail OccurNotification	1.3.6.1.4.1.171.11. 170.1000.11.0.1	This trap is sent when the PD device has the stop working or no response problem. Binding objects: (1) v1oelfPdAliveCfgPdIpType
		(2) v1oelfPdAliveCfgPdlpAddr

# **18. Appendix E–Syslog Messages**

The following table lists all possible entries and their corresponding meanings that will appear in the System Log of this Switch.

#### ZONEDEFENSE

Log Description	Severity
Event Description: Zone defense function has been enable/disable by SNMP.	warning
Log Message:	
ZONEDEFENSE: Zone defense function has been <status>by SNMP.</status>

#### STP

Log Description	Severity
Event Description: A port detect as half-duplex loop.	warning
Log Message:	
STP: <port>detect half-duplex loop, turn to Discarding.</port>	
Parameters Description:	
port: The port number.	
<b>Event Description</b> : A port release half-duplex loop, initialize port state.	warning
Log Message:	
STP: <port> release half-duplex loop, initialize port state.</port>	
Parameters Description:	
port: The port number.	
Event Description: STP queue is full, ignore timer tick message.	warning
Log Message: STP queue is full, ignore timer tick message.	
Parameters Description:	
None	
Event Description: Port becomes Backup port.	warning
Log Message:	
STP:STP detect loop, <port> becomes Backup port,turns to Discarding.</port>	
Parameters Description:	
Parameters Description:	
port: The port number.	

Event Description: Max-age timer expired.	warning
Log Message:	
STP: Max-age timer expired <port>, role <port role="">Designated.</port></port>	
Parameters Description:	
port: The port number.	
port role: The port role.	
Event Description: Set port State to hardware failed.	warning
Log Message:	
STP: Set <port><port state=""> to hardware failed.</port></port>	
Parameters Description:	
port: The port number.	
port state: The STP Port State	
<b>Event Description</b> : At the time of STP detection, the port receives the RX BPDU, turn to Discarding.	warning
Log Message:	
STP:STP detect loop <port> Rx BPDU sent by itself, turn to Discarding.</port>	
Parameters Description:	
a suffy The superior	
port: The port number.	
Event Description: Not detected Collisions at port.	warning
	warning
Event Description: Not detected Collisions at port.	warning
Event Description: Not detected Collisions at port. Log Message: STP :Not detected Collisions at port <port>.Release the loop- back.</port>	warning
Event Description: Not detected Collisions at port. Log Message: STP :Not detected Collisions at port <port>.Release the loop-</port>	warning
