1

#### INTRODUCTION

The DGS 3048 Switch can be managed through the Switch's serial port, Telnet, or the Web-based management agent. The Command Line Interface (CLI) can be used to configure and manage the Switch via the serial port or Telnet interfaces.

This manual provides a reference for all of the commands contained in the CLI. Configuration and management of the Switch via the Web-based management agent is discussed in the User's Guide.

#### Accessing the Switch via the Serial Port

The Switch's serial port's default settings are as follows:

- 9600 baud
- no parity
- 8 data bits
- 1 stop bit

A computer running a terminal emulation program capable of emulating a VT-100 terminal and a serial port configured as above is then connected to the Switch's serial port via an RS-232 DB-9 cable.

With the serial port properly connected to a management computer, the following screen should appear. If this screen does not show, try pressing Ctrl+r to refresh the console screen.

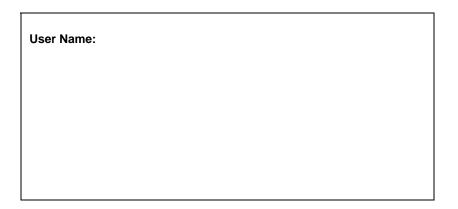

Figure 1-1. Initial CLI screen

There is no initial username or password. Just press the **Enter** key twice to display the CLI input cursor – **DGS3048**#. This is the command line where you input all the commands.

#### **Setting the Switch's IP Address**

Each switch must be assigned its own IP Address, which is used for communication with an SNMP network manager or other TCP/IP application (for example BOOTP, TFTP). The Switch's default IP address is 10.0.0.1. You can change the default Switch IP address to meet the specification of your networking address scheme.

The Switch is also assigned a unique MAC address by the factory. This MAC address cannot be changed, and can be found on the initial boot console screen – shown below.

| Performing the Power  | er-On Self Test (POS   | ST)                                       |          |

| ·   | MB. CPU speed: 266<br>32. D-Cache 16 KB, lin                             |   |          |

Figure 1-2. Boot Screen

The Switch's MAC address can also be found in the Web management program on the Switch Information (Basic Settings) window on the Configuration menu.

The IP address for the Switch must be set before it can be configured with the Web-based manager. The Switch IP address can be automatically set using BOOTP or DHCP protocols, in which case the actual address assigned to the Switch must be known.

The IP address may be set using the Command Line Interface (CLI) over the console serial port as follows:

- 1. Starting at the command line prompt, enter the commands **config ipif System ipaddress xxx.xxx.xxx/yyy.yyy.yyy.** Where the **x**'s represent the IP address to be assigned to the IP interface named **System** and the **y**'s represent the corresponding subnet mask.
- 2. Alternatively, you can enter **config ipif System ipaddress xxx.xxx.xxx.xxx/z**. Where the **x**'s represent the IP address to be assigned to the IP interface named **System** and the **z** represents the corresponding number of subnets in CIDR notation.

The IP interface named **System** on the Switch can be assigned an IP address and subnet mask which can then be used to connect a management station to the Switch's Telnet or Web-based management agent.

Figure 1-3. Assigning an IP Address

In the above example, the Switch was assigned an IP address of 10.53.13.111 with a subnet mask of 255.0.0.0 (8 in CIDR from). The system message **Success** indicates that the command was executed successfully. The Switch can now be configured and managed via Telnet and the CLI or via the Web-based management agent using the above IP address to connect to the Switch.

#### USING THE CONSOLE CL

The DGS-3048 supports a console management interface that allows the user to connect to the Switch's management agent via a serial port and a terminal or a computer running a terminal emulation program. The console can also be used over the network through the TCP/IP Telnet protocol. The console program can be used to configure the Switch to use an SNMP-based network management software over the network.

This chapter describes how to use the console interface to access the Switch, change its settings, and monitor its operation.

**Note:** Switch configuration settings are saved to non-volatile RAM using the save command. The current configuration will then be retained in the Switch's NV-RAM, and reloaded when the Switch is rebooted. If the Switch is rebooted without using the save command, the last configuration saved to NV-RAM will be loaded.

#### Connecting to the Switch

The console interface is used by connecting the Switch to a VT100-compatible terminal or a computer running an ordinary terminal emulator program (e.g., the **HyperTerminal** program included with the Windows operating system) using an RS-232C serial cable. Your terminal parameters will need to be set to:

- VT-100 compatible
- 9,600 baud
- 8 data bits
- No parity
- One stop bit
- No flow control

You can also access the same functions over a Telnet interface. Once you have set an IP address for your Switch, you can use a Telnet program (in VT-100 compatible terminal mode) to access and control the Switch. All of the screens are identical, whether accessed from the console port or from a Telnet interface.

After the Switch reboots and you have logged in, the console looks like this:

User Name: XXXXX
DGS3048#

Figure 2-1. Console Screen after login

Commands are entered at the command prompt, DGS3048#.

There are a number of helpful features included in the CLI. Entering the ? command will display a list of all of the top-level commands.

| DGS3048#   |   |
|------------|---|
| clear      | clear   |
| config     | config  |
| create     | create  |
| crypto     | Cryptographic commands                            |
| debug-mode | Exit from the EXEC to debug mode                  |
| delete     | delete  |
| dir        | display all commands.                             |
| disable    | disable   |
| download   | download  |
| enable     | enable  |
| login      | log in a user to the switch's console.            |
| logout     | log out a user from the switch's console.         |
| ping       | test the connectivity between network devices.    |
| reboot     | restart the switch.                               |
| reset      | reset the switch to the factory default settings. |
| save       | save changes in the switch's configuration to     |
|            | non-volatile ram.                                 |
| show       | show  |
| upload     | upload the current switch settings or the switch  |
|            | history log to a tftp server.                     |
| DGS3048#   |   |
|            |   |

Figure 2-2. The ? Command

The **dir** command has the same function as the ? command.

When you enter a command without its required parameters, the CLI will prompt you with a **Next possible completions:** message.

| DGS3048# show   |   |
|-----------------|---|
| Command: show   |   |
|                 |   |
| 802.1p          | 802.1p  |
| 802.1x          | 802.1x information                                    |
| account         | display user accounts.                                |
| arpentry        | Display the current contents of the Switch's ARP tabl |
| authen          | authen  |
| authen_enable   | display the method list of authentication methods for |
|                 | promoting normal user level privileges to             |
|                 | administrator level privileges on the switch.         |
| authen_login    | display a previously configured user defined method   |
|                 | list of authentication methods for users logging on t |
|                 | the switch.   |
| command_history | display the command history.                          |
| configuration   | configuration   |
| сри             | cpu   |
| crypto          | Cryptographic commands                                |

error display the error statistics for a range of ports.

fdb show fdb gvrp show gvrp

igmp\_snooping Show igmp\_snooping information

ipif Used to display the configuration of an IP interface

on the Switch.

iproute show iproute

link\_aggregation show link\_aggregation
More: <space>, Quit: q, One line: <return>

Figure 2-3. Example Command Parameter Help

In this case, the command **show** was entered without a parameter. The CLI will then prompt you to enter the **next possible completions** with the message, **Next possible completions**: Every command in the CLI has this feature, and complex commands have several layers of parameter prompting.

In addition, after typing any given command plus one space, you can see all of the next possible sub-commands, in sequential order, by repeatedly pressing the **Tab** key.

To re-enter a previously entered command at the command prompt, press the up arrow cursor key. The previous command will appear at the command prompt.

DGS3048# config account

Command: config account

WORD<1-15> username

DGS3048# config account

Command: config account

WORD<1-15> username

DGS3048#

Figure 2-4. Using the Up Arrow to Re-enter a Command

In the above example, the command **config account** was entered without the required parameter **<username>**, the CLI returned the **Next possible completions: <username>** prompt. The up arrow cursor control key was pressed to re-enter the previous command (**config account**) at the command prompt. Now the appropriate user name can be entered and the **config account** command re-executed.

All commands in the CLI function in this way. In addition, the syntax of the help prompts are the same as presented in this manual – angle brackets < > indicate a numerical value or character string, braces { } indicate optional parameters or a choice of parameters, and brackets [] indicate required parameters.

If a command is entered that is unrecognized by the CLI, the top-level commands will be displayed under the **Available commands:** prompt.

| DGS3048# the |   |
|--------------|---|
| clear        | clear   |
| config       | config  |
| create       | create  |
| crypto       | Cryptographic commands                            |
| debug-mode   | Exit from the EXEC to debug mode                  |
| delete       | delete  |
| dir          | display all commands.                             |
| disable      | disable   |
| download     | download  |
| enable       | enable  |
| login        | log in a user to the switch's console.            |
| logout       | log out a user from the switch's console.         |
| ping         | test the connectivity between network devices.    |
| reboot       | restart the switch.                               |
| reset        | reset the switch to the factory default settings. |
| save         | save changes in the switch's configuration to     |
|              | non-volatile ram.                                 |
| show         | show  |
| upload       | upload the current switch settings or the switch  |
|              | history log to a tftp server.                     |
| DGS3048# the |   |

Figure 2-5. The Next Available Commands Prompt

The top-level commands consist of commands such as **show** or **config**. Most of these commands require one or more parameters to narrow the top-level command. This is equivalent to **show** "what?" or **config** "what?" Where the "what?" is the next parameter.

For example, if you enter the **show** command with no additional parameters, the CLI will then display all of the possible next parameters.

| DGS3048# show |   |
|---------------|---|
| Command: show |   |
| 802.1p        | 802.1p  |
| 802.1x        | 802.1x information                                      |
| account       | display user accounts.                                  |
| arpentry      | Display the current contents of the Switch's ARP table. |
| authen        | authen  |
| authen_enable | display the method list of authentication methods for   |
|               | promoting normal user level privileges to               |

#### DGS-3048 Layer 2 Switch CLI Reference Manual

|                             | administrator level privileges on the switch.          |
|-----------------------------|--|
| authen_login                | display a previously configured user defined method    |
|                             | list of authentication methods for users logging on to |
|                             | the switch.  |
| command_history             | display the command history.                           |
| configuration               | configuration  |
| сри                         | сри  |
| crypto                      | Cryptographic commands                                 |
| error                       | display the error statistics for a range of ports.     |
| fdb                         | show fdb   |
| gvrp                        | show gvrp  |
| igmp_snooping               | Show igmp_snooping information                         |
| ipif                        | Used to display the configuration of an IP interface   |
|                             | on the Switch.   |
| iproute                     | show iproute   |
| More: <space>, Quit</space> | : q, One line: <return></return>                       |

Figure 2-6. Next possible completions: show command

In the above example, all of the possible next parameters for the **show** command are displayed. At the next command prompt, the up arrow was used to re-enter the **show** command, followed by the **account** parameter. The CLI then displays the user accounts configured on the Switch.

# COMMAND SYNTAX

The following symbols are used to describe how command entries are made and values and arguments are specified in this manual. The online help contained in the CLI and available through the console interface uses the same syntax.

**Note:** All commands are case-sensitive. Be sure to disable Caps Lock or any other unwanted function that changes text case.

| <angle brack<="" th=""><th colspan="2"><angle brackets=""></angle></th></angle> | <angle brackets=""></angle>   |  |
|---|---|--|
| Purpose   | Encloses a variable or value that must be specified.  |  |
| Syntax  | create ipif <ipif_name> vlan <vlan_name 32=""> ipaddress <network_address></network_address></vlan_name></ipif_name>  |  |
| Description   | In the above syntax example, you must supply an IP interface name in the <ipif_name> space, a VLAN name in the <vlan_name 32=""> space, and the network address in the <network_address> space. Do not type the angle brackets.</network_address></vlan_name></ipif_name> |  |
| Example<br>Command  | create ipif Engineering vlan Design ipaddress 10.24.22.5/255.0.0.0  |  |

| [square brack      | [square brackets]   |  |
|--------------------|---|--|
| Purpose            | Encloses a required value or set of required arguments. Only one value or argument can be specified.  |  |
| Syntax             | create account [admin   user]   |  |
| Description        | In the above syntax example, you must specify either an <b>admin</b> or a <b>user</b> level account to be created. Do not type the square brackets. |  |
| Example<br>Command | create account admin  |  |

| vertical bar       |  |
|--------------------|--|
| Purpose            | Separates two or more mutually exclusive items in a list, one of which must be entered.                                  |
| Syntax             | show snmp [community   detail]   |
| Description        | In the above syntax example, you must specify either <b>community</b> , or <b>detail</b> . Do not type the vertical bar. |
| Example<br>Command | show snmp community  |

| {braces}        |   |
|-----------------|---|
| Purpose         | Encloses an optional value or set of optional arguments.  |
| Syntax          | reset {[config   system]}   |
| Description     | In the above syntax example, you have the option to specify <b>config</b> or <b>system</b> . It is not necessary to specify either optional value, however the effect of the system reset is dependent on which, if any, value is specified. Therefore, with this example there are three possible outcomes of performing a system reset. See the chapter <b>Basic Commands</b> for more details about the reset command. |
| Example command | reset config  |

| Line Editing Key Usage |  |
|------------------------|--|
| Delete                 | Deletes the character under the cursor and then shifts the remaining characters in the line to the left.   |
| Backspace              | Deletes the character to the left of the cursor and shifts the remaining characters in the line to the left.   |
| Left Arrow             | Moves the cursor to the left.  |
| Right Arrow            | Moves the cursor to the right.   |
| Up Arrow               | Repeat the previously entered command. Each time the up arrow is pressed, the command previous to that displayed appears. This way it is possible to review the command history for the current session. Use the down arrow to progress sequentially forward through the command history list. |
| Down Arrow             | The down arrow will display the next command in the command history entered in the current session. This displays each command sequentially as it was entered. Use the up arrow to review previous commands.   |
| Tab                    | Shifts the cursor to the next field to the left.   |

| Multiple Page Display Control Keys |   |
|------------------------------------|---|
| Space                              | Displays the next page.   |
| CTRL+c                             | Stops the display of remaining pages when multiple pages are to be displayed. |
| ESC                                | Stops the display of remaining pages when multiple pages are to be displayed. |
| q                                  | Stops the display of remaining pages when multiple pages are to be displayed. |
| Enter                              | Displays the next line or table entry.  |

4

# BASIC SWITCH COMMANDS

The basic switch commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command              | Parameters  |
|----------------------|---|
| create account       | [admin   user] <username 15=""></username>  |
| config account       | <username 15=""></username>   |
| show account         |   |
| delete account       | <username 15=""></username>   |
| show session         |   |
| show switch          |   |
| show serial_port     |   |
| config serial_port   | {baud_rate [9600   19200   38400   115200] auto_logout [never   2_minutes   5_minutes   10_minutes   15_minutes]} |
| enable clipaging     |   |
| disable clipaging    |   |
| enable web           | <tcp_port_number 1-65535=""></tcp_port_number>  |
| disable web          |   |
| save                 |   |
| reboot               |   |
| reset                |   |

| show CPU Utilization |   |
| show configuration   |   |
| enable jumbo_frame   |   |
| disable jumbo_frame  |   |
| show jumbo_frame     |   |

Each command is listed, in detail, in the following sections.

| create account |   |
|----------------|---|
| Purpose        | Used to create user accounts.   |
| Syntax         | create [admin   user] <username 15=""></username>   |
| Description    | The create account command is used to create user accounts that consist of a username of up to 15 characters and a password of up to 15 characters as well. Up to 8 user accounts can be created. |
| Parameters     | admin <username></username>   |
|                | user <username></username>  |
| Restrictions   | Only Administrator-level users can issue this command.  |
|                | Usernames can be between 1 and 15 characters.   |
|                | Passwords can be between 0 and 15 characters.   |

#### Example usage:

To create an administrator-level user account with the username "dlink".

DGS3048#:4#create account admin dlink
Command: create account admin dlink

Enter a case-sensitive new password:\*\*\*\*

Enter the new password again for confirmation:\*\*\*\*

Success.

DGS3048#:4#

| config account |   |  |
|----------------|---|--|
| Purpose        | Used to configure user accounts.  |  |
| Syntax         | config account <username 15=""></username>  |  |
| Description    | The config account command configures a user account that has been created using the <b>create account</b> command. |  |
| Parameters     | <username></username>   |  |
| Restrictions   | Only Administrator-level users can issue this command.  |  |
|                | Usernames can be between 1 and 15 characters.   |  |
|                | Passwords can be between 0 and 15 characters.   |  |

To configure the user password of "dlink" account:

DGS3048#config account dlink

Command: config account dlink

Enter a old password:\*\*\*\*

Enter a case-sensitive new password:\*\*\*\*

Enter the new password again for confirmation:\*\*\*\*

Success.

DGS3048#

#### show account

Purpose Used to display user accounts.

Syntax show account

Description Displays all user accounts created on the Switch. Up to 8 user

accounts can exist on the Switch at one time.

Parameters None.
Restrictions None.

#### Example usage:

To display the accounts that have been created:

DGS3048#show account

Command: show account

**Current Accounts:** 

Username Access Level

dlink Admin

Total Entries: 1

DGS3048#

#### delete account

Purpose Used to delete an existing user account.

Syntax delete account <username 15>

Description The delete account command deletes a user account that has been

created using the create account command.

Parameters <username>

Restrictions Only Administrator-level users can issue this command.

#### Example usage:

To delete the user account "System":

DGS3048#delete account System

Command: delete account System

Are you sure to delete the last administrator account?(y/n) Success.

DGS3048#

| show session |   |  |
|--------------|---|--|
| Purpose      | Used to display a list of currently logged-in users.  |  |
| Syntax       | show session  |  |
| Description  | This command displays a list of all the users that are logged-in at the time the command is issued. |  |
| Parameters   | None.   |  |
| Restrictions | None.   |  |

#### Example usage:

To display the way that the users logged in:

| Command: show session  DGS3048# show session  ID Protocol From Level Name          |
|--|
| ID Protocol From Level Name  0 HTTP 10.6.10.43 15 admin 1 HTTP 10.6.10.43 15 admin |
| 0 HTTP 10.6.10.43 15 admin<br>1 HTTP 10.6.10.43 15 admin                           |
| 1 HTTP 10.6.10.43 15 admin   |
|  |
| 2 Telnet 10.6.60.13 15 admin   |
|  |

| show switch  |   |
|--------------|---|
| Purpose      | Used to display information about the Switch.       |
| Syntax       | show switch   |
| Description  | This command displays information about the Switch. |
| Parameters   | None.   |
| Restrictions | None.   |

#### Example usage:

To display the Switch information:

DGS3048#show switch

Command: show switch

: DGS3048# Gigabit-Ethernet Switch Device Type

: DA-10-21-00-00-01 MAC Address IP Address : 10.41.44.22 (Manual)

VLAN Name : default Subnet Mask : 255.0.0.0 Default Gateway : 0.0.0.0

**Boot PROM Version: Build 2.00.004** Firmware Version : Build 2.00-B04

Hardware Version : 1A1

System Name : DGS3048#3

System Location : 7th\_flr\_east\_cabinet

System Contact : Julius\_Erving\_212-555-6666

: Disabled Spanning Tree : Disabled **GVRP** IGMP Snooping : Disabled

TELNET : Enabled (TCP 23) **WEB** : Enabled (TCP 80)

: Enabled **RMON** 

DGS3048#

show serial\_port

Purpose Used to display the current serial port settings.

**Syntax** show serial\_port

Description This command displays the current serial port settings.

**Parameters** None. Restrictions None.

Example usage:

To display the serial port setting:

DGS3048# show serial\_port Command: show serial port

**Baud Rate** : 9600 Data Bits : 8 **Parity Bits** : None Stop Bits : 1

Auto-Logout : 10 mins

| config se    | config serial_port  |  |  |
|--------------|---|--|--|
| Purpose      | Used to configure the serial port.  |  |  |
| Syntax       | config serial_port {baud_rate [9600   19200   38400   115200]<br>auto_logout [never   2_minutes   5_minutes  10_minutes  <br>15_minutes]}   |  |  |
| Description  | This command is used to configure the serial port's baud rate and auto logout settings.   |  |  |
| Parameters   | baud rate [9600   19200   38400   115200] – The serial bit rate that will be used to communicate with the management host.  |  |  |
|              | auto_logout - This parameter will allow the user to choose the time the<br>Switch's serial port will be idle before automatically logging out. The user<br>may choose one of the following. |  |  |
|              | never – No time limit on the length of time the console can be open<br>with no user input.  |  |  |
|              | <ul> <li>2_minutes – The console will log out the current user if there is no<br/>user input for 2 minutes.</li> </ul>  |  |  |
|              | ■ 5_minutes – The console will log out the current user if there is no user input for 5 minutes.  |  |  |
|              | <ul> <li>10_minutes – The console will log out the current user if there is<br/>no user input for 10 minutes.</li> </ul>  |  |  |
|              | <ul> <li>15_minutes – The console will log out the current user if there is<br/>no user input for 15 minutes.</li> </ul>  |  |  |
| Restrictions | Only administrator-level users can issue this command.  |  |  |

To configure the baud rate:

DGS3048# config serial\_port baud\_rate 9600 Command: config serial\_port baud\_rate 9600

Success.

| enabl | A CI | ipag |   |
|-------|------|------|---|
| GHabi |      |      | ш |

Purpose Used to pause the scrolling of the console screen when the show

command displays more than one page.

Syntax enable clipaging

Description This command is used when issuing a command which causes the

console screen to rapidly scroll through several pages. This

command will cause the console to pause at the end of each page.

The default setting is enabled.

Parameters None.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To enable pausing of the screen display when the show command output reaches the end of the page:

DGS3048# enable clipaging

Command: enable clipaging

Success.

DGS3048#

#### disable clipaging

Purpose Used to disable the pausing of the console screen scrolling at the

end of each page when the command displays more than one

screen of information.

Syntax disable clipaging

Description This command is used to disable the pausing of the console screen

at the end of each page when the command would display more

than one screen of information.

Parameters None.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To disable pausing of the screen display when show command output reaches the end of the page:

DGS3048# disable clipaging

Command: disable clipaging

Success.

| enable web   |   |
|--------------|---|
| Purpose      | Used to enable the HTTP-based management software on the Switch.  |
| Syntax       | enable web <tcp_port_number 1-65535=""></tcp_port_number>   |
| Description  | This command is used to enable the Web-based management software on the Switch. The user can specify the TCP port number the Switch will use to listen for Telnet requests.                     |
| Parameters   | <pre><tcp_port_number 1-65535=""> - The TCP port number. TCP ports are numbered between 1 and 65535. The "well-known" port for the Web-based management software is 80.</tcp_port_number></pre> |
| Restrictions | Only administrator-level users can issue this command.  |

To enable HTTP and configure port number:

DGS3048# enable web 80
Command: enable web 80
Success.
DGS3048#

| disable web  |  |
|--------------|--|
| Purpose      | Used to disable the HTTP-based management software on the Switch.      |
| Syntax       | disable web  |
| Description  | This command disables the Web-based management software on the Switch. |
| Parameters   | None.  |
| Restrictions | Only administrator-level users can issue this command.                 |

#### Example usage:

To disable HTTP:

DGS3048# disable web
Command: disable web
Success.
DGS3048#

| save         |   |
|--------------|---|
| Purpose      | Used to save changes in the Switch's configuration to non-volatile RAM.   |
| Syntax       | save  |
| Description  | This command is used to enter the current switch configuration into non-volatile RAM. The saved switch configuration will be loaded into the Switch's memory each time the Switch is restarted. |
| Parameters   | None.   |
| Restrictions | Only administrator-level users can issue this command.  |

To save the Switch's current configuration to non-volatile RAM:

DGS3048#save Command: save

Saving all configurations to NV-RAM... Done.

DGS3048#

| reboot       |   |
|--------------|---|
| Purpose      | Used to restart the Switch.                 |
| Syntax       | reboot                                      |
| Description  | This command is used to restart the Switch. |
| Parameters   | None.                                       |
| Restrictions | None.                                       |

#### Example usage:

To restart the Switch:

DGS3048# reboot Command: reboot

Are you sure want to proceed with the system reboot? (y/n)

| reset        |   |
|--------------|---|
| Purpose      | Used to reset the Switch to the factory default settings.   |
| Syntax       | reset   |
| Description  | This command is used to restore the Switch's configuration to the default settings assigned from the factory.   |
| Parameters   | config – If the keyword 'config' is specified, all of the factory default settings are restored on the Switch including the IP address, user accounts, and the Switch history log. The Switch will not save or reboot.                                  |
|              | system – If the keyword 'system' is specified, all of the factory default settings are restored on the Switch. The Switch will save and reboot after the settings are changed to default. Rebooting will clear all entries in the Forwarding Data Base. |
|              | If no parameter is specified, the Switch's current IP address, user accounts, and the Switch history log are not changed. All other parameters are restored to the factory default settings. The Switch will not save or reboot.                        |
| Restrictions | Only administrator-level users can issue this command.  |

To restore all of the Switch's parameters to their default values:

DGS3048# reset config
Command: reset config
Success.
DGS3048#

| login        |  |
|--------------|--|
| Purpose      | Used to log in a user to the Switch's console.   |
| Syntax       | login  |
| Description  | This command is used to initiate the login procedure. The user will be prompted for his Username and Password. |
| Parameters   | None.  |
| Restrictions | None.  |

#### Example usage:

To initiate the login procedure:

| DGS3048#login  |  |  |
|----------------|--|--|
| Command: login |  |  |
| UserName:      |  |  |

| logout       |   |
|--------------|---|
| Purpose      | Used to log out a user from the Switch's console.                           |
| Syntax       | logout  |
| Description  | This command terminates the current user's session on the Switch's console. |
| Parameters   | None.   |
| Restrictions | None.   |

To terminate the current user's console session:

| DGS3048#log  | out |
|--------------|-----|
| DOGGGTUTTION | uul |

| ping         |  |
|--------------|--|
| Purpose      | Used to test the connectivity between network devices.   |
| Syntax       | ping <ipaddr> {times <value 1-255="">} {timeout <sec 1-99="">}</sec></value></ipaddr>  |
| Description  | The ping command sends Internet Control Message Protocol (ICMP) echo messages to a remote IP address. The remote IP address will then "echo" or return the message. This is used to confirm connectivity between the Switch and the remote device. |
| Parameters   | <ipaddr> - Specifies the IP address of the host.</ipaddr>  |
|              | times <value 1-255=""> - The number of individual ICMP echo messages to be sent. The maximum value is 255. The default is 0.</value>   |
|              | timeout <sec 1-99=""> - Defines the time-out period while waiting for a response from the remote device. A value of 1 to 99 seconds can be specified. The default is 1 second.</sec>   |
|              | Pinging an IP address without the <i>times</i> parameter will ping the target device an infinite amount of times.  |
| Restrictions | None.  |

To ping the IP address 10.48.74.121 four times:

DGS3048#ping 10.48.74.121 times 4

Command: ping 10.48.74.121

Reply from 10.48.74.121, time<10ms Reply from 10.48.74.121, time<10ms Reply from 10.48.74.121, time<10ms Reply from 10.48.74.121, time<10ms

Ping statistics for 10.48.74.121

Packets: Sent =4, Received =4, Lost =0

DGS3048#

#### **Show CPU Utilization**

Purpose Used to measuring CPU utilization.

Syntax show cpu utilization

Description This command presents information about CPU utilization

Parameters None. Restrictions None.

#### Example usage:

To show utilization information:

DGS3048# show cpu utilization

CPU utilization service is on.

**CPU** utilization

-----

five seconds:2% ;one minute:1% ;five minutes:1%

DGS3048#

## **Show Configuration**

Purpose Used to show configuration.

Syntax show configuration

Description This command shows configuration.

Parameters None. Restrictions None.

Example usage:

To show configuration information:

DGS3048# show configuration

Command: show configuration

running running-config startup startup-config

DGS3048# show configuration

#### enable jumbo\_frame

Purpose Used to enable jumbo frames on the device.

Syntax enable jumbo\_frame

Description The port jumbo-frame command enables jumbo frames on the

device.

Parameters None. Restrictions None.

Example usage:

To enable jumbo frames:

DGS3048# enable jumbo\_frame

Success. DGS3048#

## disable jumbo\_frame

Purpose Used to disable Jumbo frames on the device.

Syntax disable jumbo\_frame

Description The disable jumbo\_frame disables jumbo frames on the device.

Parameters None. Restrictions None.

Example usage:

To disable jumbo\_frames:

DGS3048# disable jumbo\_frame

Success.

DGS3048#

| show jumbo_frame |  |  |
|------------------|--|--|
| Purpose          | Used to display the jumbo frame configuration.                         |  |
| Syntax           | show ports jumbo-frame   |  |
| Description      | The show ports jumbo-frame displays the configuration of jumbo frames. |  |
| Parameters       | None.  |  |
| Restrictions     | None.  |  |

#### Example usage:

To show the configuration of jumbo\_frames status on the dev ice:

DGS3048# show jumbo\_frame

Jumbo frames are disabled.

Jumbo frames will be enabled after save and restart.

5

# SWITCH PORT COMMANDS

The switch port commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command                  | Parameters  |
|--------------------------|---|
| config ports             | [ <portlist>   all] {speed [auto   10_half   10_full   100_half   100_full   1000_full   {[master   slave]}]   flow_control [enable   disable]   learning [enable   disable]   state [enable   disable]}</portlist> |
| show ports               | { <portlist>}</portlist>  |
| config ports description | <portlist> <string 1-64=""></string></portlist>   |
| delete ports description | <portlist></portlist>   |
| show ports description   | { <portlist>}</portlist>  |

Each command is listed, in detail, in the following sections.

#### config ports

Purpose Used to configure the Switch's Ethernet port settings.

Syntax config ports [all | <portlist>] {speed [auto | 10\_half | 10\_full | 100\_half

| 100\_full | 1000\_full] | flow\_control [enable | disable] | learning

[enable | disable] | state [enable | disable]}

Description This command allows for the configuration of the Switch's Ethernet ports.

Only the ports listed in the <portlist> will be affected.

Parameters <portlist> - Specifies a range of ports to be configured.

all - Configure all ports on the Switch.

speed – Allows the user to set the speed of a port or range of ports, with the addition of one of the following:

- auto Enables auto-negotiation for the specified range of ports.
- [10 | 100 | 1000] Configures the speed in Mbps for the specified range of ports. The
- [half | full] Configures the specified range of ports as either fullor half-duplex.

[master | slave] – The master and slave parameters refer to connections running a 1000BASE-T cable for connection between the Switch port and other device capable of a gigabit connection. The master setting will allow the port to advertise capabilities related to duplex, speed and physical layer type. The master setting will also determine the master and slave relationship between the two connected physical layers. This relationship is necessary for establishing the timing control between the two physical layers. The timing control is set on a master physical layer by a local source. The slave setting uses loop timing, where the timing comes form a data stream received from the master. If one connection is set for 1000 master, the other side of the connection must be set for 1000 slave. Any other configuration will result in a link down status for both ports.

flow\_control [enable | disable] - Enable or disable flow control for the specified ports.

*learning [enable | disable]* – Enables or disables the MAC address learning on the specified range of ports.

state [enable | disable] – Enables or disables the specified range of ports.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To configure the speed of ports 1-3 to be 10 Mbps, full duplex, learning and state enabled:

DGS3048#config ports 1-3 speed 10\_full learning enable state enable Command: config ports 1-3 speed 10\_full learning enable state enable

Success.

| show ports   |  |
|--------------|--|
| Purpose      | Used to display the current configuration of a range of ports.                         |
| Syntax       | show ports { <portlist>}</portlist>  |
| Description  | This command is used to display the current configuration of a range of ports.         |
| Parameters   | <pre><portlist> - Specifies a port or range of ports to be displayed.</portlist></pre> |
| Restrictions | None.  |

To display the configuration of ports 1-5 on the Switch:

| DGS  | 3048#shov      | w ports 1-5           |                       |                |
|------|----------------|-----------------------|-----------------------|----------------|
| Com  | mand: sho      | ow ports 1-5          |                       |                |
| Port | Port           | Settings              | Connection            | Address        |
|      | State          | Speed/Duplex/FlowCtrl | Speed/Duplex/FlowCtrl | Learning       |
|      |                |                       |                       |                |
| 1    | <b>Enabled</b> | Auto/Enabled          | Link Down             | <b>Enabled</b> |
| 2    | <b>Enabled</b> | Auto/Enabled          | Link Down             | <b>Enabled</b> |
| 3    | <b>Enabled</b> | Auto/Enabled          | 1000M/Full?None       | Enabled        |
| 4    | <b>Enabled</b> | Auto/Enabled          | Link Down             | <b>Enabled</b> |
| 5    | <b>Enabled</b> | Auto/Enabled          | Link Down             | <b>Enabled</b> |

| config ports description |   |  |
|--------------------------|---|--|
| Purpose                  | Used to add a description to an interface or ranges of interface                        |  |
| Syntax                   | <portlist> <string 1-64=""></string></portlist>   |  |
| Description              | This command enables user to add a description to an interface or ranges of interfaces. |  |
| Parameters               | <pre><portlist> - Specifies a port or range of ports to be displayed.</portlist></pre>  |  |
|                          | <string 1-64=""> - description content</string>   |  |
| Restrictions             | None  |  |

#### Example usage:

To add a description to an interface:

| DGS3048# config ports description |                           |  |
|-----------------------------------|---------------------------|--|
| Command: config ports description |                           |  |
| PORT_LIST<br>DGS3048#             | specifies range of ports. |  |

#### delete ports description

Purpose Used to delete a description to an interface or ranges of interface

Syntax <portlist>

Description This command enables user to delete a description to an interface or

ranges of interfaces.

Parameters <portlist> - Specifies a port or range of ports to be displayed.

Restrictions None

#### Example usage:

To delete a description of an interface:

DGS3048# delete ports description 1-5

Success. DGS3048#

#### show ports description

Purpose Used to show a description to an interface or ranges of interface

Syntax <portlist>

Description This command enables user to show a description to an interface or

ranges of interfaces.

Parameters <portlist> - Specifies a port or range of ports to be displayed.

Restrictions None

#### Example usage:

To show a description of an interface:

DGS3048# show ports description 1-5

Command: show ports 1-5

PORT\_LIST specifies a port or range of ports to be displayed.

6

# NETWORK MANAGEMENT (SNMP) COMMANDS

The network management commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

The DGS-3048 supports the Simple Network Management Protocol (SNMP) versions 1, 2c, and 3. The user may specify which version of the SNMP to use to monitor and control the Switch. The three versions of SNMP vary in the level of security provided between the management station and the network device. The following table lists the security features of the three SNMP versions:

| SNMP<br>Version | Authentication Method | Description  |
|-----------------|-----------------------|--|
| v1              | Community String      | Community String is used for authentication – NoAuthNoPriv                   |
| v2c             | Community String      | Community String is used for authentication – NoAuthNoPriv                   |
| v3              | Username              | Username is used for authentication – NoAuthNoPriv                           |
| v3              | MD5 or SHA            | Authentication is based on the HMAC-MD5 or HMAC-SHA algorithms  – AuthNoPriv |
| v3              | MD5 DES or SHA DES    | Authentication is based on the HMAC-MD5 or HMAC-SHA algorithms – AuthPriv.   |
|                 |                       | DES 32-bit encryption is added based on the CBC-DES (DES-32) standard        |

| Command               | Parameters   |
|-----------------------|--|
| create snmp user      | <username 24=""> <groupname 30=""> [encrypted [by_password auth [md5 <auth_password 1-32="">   sha <auth_password 1-32="">]   by_key auth [md5 <auth_key 32="" 64="" or="">  sha<auth_key 40="" 72="" or="">]]]</auth_key></auth_key></auth_password></auth_password></groupname></username> |
| delete snmp user      | <username 24=""></username>  |
| show snmp user        |  |
| create snmp view      | <view_name 32=""> <oid> view_type [included   excluded]</oid></view_name>  |
| delete snmp view      | <view_name 30=""> [all   oid]</view_name>  |

| create snmp community | <pre><community_string 20=""> view <view_name 30=""> [read_only   read_write]</view_name></community_string></pre>   |
| delete snmp community | <pre><community_string 20=""></community_string></pre>   |
| show snmp community   | { <community_string 20="">}</community_string>   |
| config snmp engineID  | [Default   <snmp_engineid 10-64="">]</snmp_engineid>   |
| show snmp engineID    |  |
| create snmp group     | <pre><groupname 30=""> [v1   v2c   v3 [noauth_nopriv   auth_nopriv   auth_priv]{notify_view <view_name 30="">}] {read_view</view_name></groupname></pre>   |

#### DGS-3048 Layer 2 Switch CLI Reference Manual

| Command                            | Parameters   |
|------------------------------------|--|
|                                    | <view_name 30="">   write_view <view_name 30="">}</view_name></view_name>  |
| delete snmp group                  | <groupname 30=""></groupname>  |
| show snmp groups                   |  |
| create snmp host                   | <pre><ipaddr> [v1<community_string 20="">   v2c<community_string 20="">   v3 [noauth_nopriv   auth_nopriv   auth_priv]<auth_string 24=""></auth_string></community_string></community_string></ipaddr></pre> |
| delete snmp host                   | <ipaddr></ipaddr>  |
| show snmp host                     | { <ipaddr>}</ipaddr>   |
| create trusted_host                | <ipaddr></ipaddr>  |
| delete trusted_host                | <ipaddr></ipaddr>  |
| show trusted_host                  | <ipaddr></ipaddr>  |
| enable snmp traps                  |  |
| disable snmp traps                 |  |
| enable snmp<br>authenticate traps  |  |
| disable snmp<br>authenticate traps |  |
| show snmp traps                    |  |
| config snmp<br>system_contact      | <sw_contact></sw_contact>  |
| config snmp<br>system_location     | <sw_location></sw_location>  |
| config snmp<br>system_name         | <sw_name></sw_name>  |

Each command is listed, in detail, in the following sections.

|             | DGS-3048 Layer 2 Switch CLI Reference Manual  |
|-------------|---|
| create snm  | o user  |
| Purpose     | Used to create a new SNMP user and adds the user to an SNMP group that is also created by this command.   |
| Syntax      | create snmp user <username 24=""> <groupname 30=""> {encrypted [by_password auth [md5 <auth_password 8-16="">   sha <auth_password 8-20="">]   by_key auth [md5 <auth_key 32-32="">  sha<auth_key 40-40="">]]}</auth_key></auth_key></auth_password></auth_password></groupname></username> |
| Description | The <b>create snmp user</b> command creates a new SNMP user and adds the user to an SNMP group that is also created by this command.  |
| Parameters  | <username 24=""> – An alphanumeric name of up to 24 characters that will identify the new SNMP user.</username>   |
|             | <groupname 30=""> – An alphanumeric name of up to 30 characters that will identify the SNMP group the new SNMP user will be associated with.</groupname>  |
|             | <ul><li>encrypted – Allows the user to choose a type of authorization for<br/>authentication using SNMP. The user may choose:</li></ul>   |
|             | <ul> <li>by_password – Requires the SNMP user to enter a password for authentication and privacy. The password is defined by specifying the auth_password below. This method is recommended.</li> </ul>   |
|             | <ul> <li>by_key – Requires the SNMP user to enter a encryption<br/>key for authentication and privacy. The key is defined by<br/>specifying the key in hex form below. This method is not<br/>recommended.</li> </ul>   |
|             | <ul><li>auth - The user may also choose the type of authentication<br/>algorithms used to authenticate the snmp user. The choices are:</li></ul>  |
|             | <ul> <li>md5 – Specifies that the HMAC-MD5-96 authentication<br/>level will be used. md5 may be utilized by entering one of<br/>the following:</li> </ul>   |
|             | <auth 8-16="" password=""> - An alphanumeric string of<br/>between 8 and 16 characters that will be used to<br/>authorize the agent to receive packets for the host.</auth>   |
|             | <auth_key 32-32=""> - Enter an alphanumeric string of<br/>exactly 32 characters, in hex form, to define the key that<br/>will be used to authorize the agent to receive packets for<br/>the host.</auth_key>  |
|             | <ul> <li>sha – Specifies that the HMAC-SHA-96 authentication level<br/>will be used.</li> </ul>   |
|             | <auth 8-20="" password=""> - An alphanumeric string of<br/>between 8 and 16 characters that will be used to<br/>authorize the agent to receive packets for the host.</auth>   |
|             | <auth_key 40-40=""> - An alphanumeric string of exactly 40 characters, in hex form, to define the key that will be used to authorize the agent to receive packets for the host.</auth_key>  |

Restrictions

Only administrator-level users can issue this command.

To create an SNMP user on the Switch:

DGS3048#create snmp user dlink default encrypted by\_password auth md5 auth\_password priv none

Command: create snmp user dlink default encrypted by\_password auth md5 auth\_password priv none

Success.

DGS3048#

| delete snmp user |   |  |
|------------------|---|--|
| Purpose          | Used to remove an SNMP user from an SNMP group and also to delete the associated SNMP group.                                    |  |
| Syntax           | delete snmp user <username 24=""></username>  |  |
| Description      | The <b>delete snmp user</b> command removes an SNMP user from its SNMP group and then deletes the associated SNMP group.        |  |
| Parameters       | <username 24=""> – An alphanumeric string of up to 24 characters that identifies the SNMP user that will be deleted.</username> |  |
| Restrictions     | Only administrator-level users can issue this command.  |  |

#### Example usage:

To delete a previously entered SNMP user on the Switch:

DGS3048#delete snmp user dlink Command: delete snmp user dlink

Success.

| show snmp user |  |  |
|----------------|--|--|
| Purpose        | Used to display information about each SNMP username in the SNMP group username table.                     |  |
| Syntax         | show snmp user   |  |
| Description    | The show snmp user command displays information about each SNMP username in the SNMP group username table. |  |
| Parameters     | None.  |  |
| Restrictions   | Only administrator-level users can issue this command.   |  |

To display the SNMP users currently configured on the Switch:

| DGS3048#show snmp user Command: show snmp user |                   |              |               |              |
|--|-------------------|--------------|---------------|--------------|
| Username                                       | <b>Group Name</b> | SNMP Version | Auth-Protocol | PrivProtocol |
| initial  | initial           | V3           | None          | None         |
| Total Entries                                  | s: 1              |              |               |              |
| DGS3048#                                       |                   |              |               |              |

| create snmp view |   |  |
|------------------|---|--|
| Purpose          | Used to assign views to community strings to limit which MIB objects and SNMP manager can access.                                       |  |
| Syntax           | create snmp view <view_name 30=""> <oid> view_type [included   excluded]</oid></view_name>  |  |
| Description      | The create snmp view command assigns views to community strings to limit which MIB objects an SNMP manager can access.                  |  |
| Parameters       | <view_name 30=""> – An alphanumeric string of up to 30 characters that identifies the SNMP view that will be created.</view_name>       |  |
|                  | <oid> – The object ID that identifies an object tree (MIB tree) that will be included or excluded from access by an SNMP manager.</oid> |  |
|                  | included – Include this object in the list of objects that an SNMP manager can access.  |  |
|                  | excluded – Exclude this object from the list of objects that an SNMP manager can access.  |  |
| Restrictions     | Only administrator-level users can issue this command.  |  |

# Example usage:

To create an SNMP view:

DGS3048#create snmp view dlinkview 1.3.6 view\_type included Command: create snmp view dlinkview 1.3.6 view\_type included Success.

DGS3048#

| delete snmp view |  |  |
|------------------|--|--|
| Purpose          | Used to remove an SNMP view entry previously created on the Switch.  |  |
| Syntax           | delete snmp view <view_name 30=""> [all   <oid>]</oid></view_name>   |  |
| Description      | The <b>delete snmp view</b> command is used to remove an SNMP view previously created on the Switch.                       |  |
| Parameters       | <view_name 30=""> – An alphanumeric string of up to 30 characters that identifies the SNMP view to be deleted.</view_name> |  |
|                  | <ul> <li>all – Specifies that all of the SNMP views on the Switch will be deleted.</li> </ul>                              |  |
|                  | <oid> – The object ID that identifies an object tree (MIB tree) that will be deleted from the Switch.</oid>                |  |
| Restrictions     | Only administrator-level users can issue this command.   |  |

To delete a previously configured SNMP view from the Switch:

DGS3048#delete snmp view dlinkview all Command: delete snmp view dlinkview all

Success.

DGS3048#

| show snmp view |   |  |
|----------------|---|--|
| Purpose        | Used to display an SNMP view previously created on the Switch.  |  |
| Syntax         | show snmp view { <view_name 30="">}</view_name>   |  |
| Description    | The <b>show snmp view</b> command displays an SNMP view previously created on the Switch.   |  |
| Parameters     | <view_name 30=""> – An alphanumeric string of up to 30 characters that identifies the SNMP view that will be displayed.</view_name> |  |
| Restrictions   | None.   |  |

# Example usage:

To display SNMP view configuration:

| DGS3048#show sn   | •                  |           |
|-------------------|--------------------|-----------|
| Command: show s   | nmp view           |           |
| Vacm View Table   | Settings           |           |
| View Name         | Subtree            | View Type |
|                   | 4                  |           |
| ReadView          | 1                  | Included  |

| restricted        | 1.3.6.1.6.3.11.2.1 | Included  |
| restricted        | 1.3.6.1.6.3.15.1.1 | Included  |
| CommunityView     | 1                  | Included  |
| CommunityView     | 1.3.6.1.6.3        | Excluded  |
| CommunityView     | 1.3.6.1.6.3.1      | Included  |
| Γotal Entries: 11 |                    |           |
| DGS3048#          |                    |           |

| create snmp | community  |
|-------------|--|
| Purpose     | Used to create an SNMP community string to define the relationship between the SNMP manager and an agent. The community string acts like a password to permit access to the agent on the Switch. One or more of the following characteristics can be associated with the community string: |
|             | An Access List of IP addresses of SNMP managers that are permitted to use the community string to gain access to the Switch's SNMP agent.  |
|             | An MIB view that defines the subset of all MIB objects that will be accessible to the SNMP community.  |
|             | Read/write or read-only level permission for the MIB objects accessible to the SNMP community.   |
| Syntax      | create snmp community <community_string 20=""> view <view_name 30=""> [read_only   read_write]</view_name></community_string>  |
| Description | The <b>create snmp community</b> command is used to create an SNMP community string and to assign access-limiting characteristics to this community string.  |
| Parameters  | <community_string 20=""> – An alphanumeric string of up to 20 characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch's SNMP agent.</community_string>                      |
|             | <view_name 30=""> – An alphanumeric string of up to 30 characters that is used to identify the group of MIB objects that a remote SNMP manager is allowed to access on the Switch.</view_name>   |
|             | read_only – Specifies that SNMP community members using the community string created with this command can only read the contents of the MIBs on the Switch.   |
|             | read_write – Specifies that SNMP community members using the community string created with this command can read from and write  |

# create snmp community

to the contents of the MIBs on the Switch.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To create the SNMP community string "dlink:"

DGS3048#create snmp community dlink view ReadView read\_write Command: create snmp community dlink view ReadView read write

Success.

DGS3048#

# delete snmp community

Purpose Used to remove a specific SNMP community string from the Switch.

Syntax delete snmp community < community\_string 20>

Description The **delete snmp community** command is used to remove a

previously defined SNMP community string from the Switch.

Parameters < community\_string 20> - An alphanumeric string of up to 20

characters that is used to identify members of an SNMP community to delete. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch's SNMP agent.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To delete the SNMP community string "dlink:"

DGS3048#delete snmp community dlink Command: delete snmp community dlink

Success.

DGS3048#

# show snmp community

Purpose Used to display SNMP community strings configured on the Switch.

Syntax show snmp community {<community\_string 20>}

Description The **show snmp community** command is used to display SNMP

community strings that are configured on the Switch.

Parameters < community\_string 20> - An alphanumeric string of up to 20

characters that is used to identify members of an SNMP community. This string is used like a password to give remote SNMP managers access to MIB objects in the Switch's SNMP

agent.

Restrictions None.

To display the currently entered SNMP community strings:

| DGS3048#show snmp community Command: show snmp community |                                       |                                       |  |
|--|---------------------------------------|---------------------------------------|--|
| SNMP Community Table                                     |                                       |                                       |  |
| Community Name   | Community Name View Name Access Right |                                       |  |
| dlink<br>private<br>public                               | ReadView CommunityView CommunityView  | read_write<br>read_write<br>read_only |  |
| Total Entries: 3   |                                       |                                       |  |
| DGS3048#   |                                       |                                       |  |

| config snmp engineID |   |  |
|----------------------|---|--|
| Purpose              | Used to configure a name for the SNMP engine on the Switch.   |  |
| Syntax               | config snmp engineID [default   <snmp_engineid 10-64="">]</snmp_engineid>   |  |
| Description          | The <b>config snmp engineID</b> command configures a name for the SNMP engine on the Switch.                          |  |
| Parameters           | Default – displays the automatically created engineID based on the device mac.  |  |
|                      | <snmp_engineid> – An alphanumeric string that will be used to identify the SNMP engine on the Switch.</snmp_engineid> |  |
| Restrictions         | Only administrator-level users can issue this command.  |  |

#### Example usage:

To give the SNMP agent on the Switch the name "0035636666"

DGS3048#config snmp engineID 0035636666
Command: config snmp engineID 0035636666
Success.
DGS3048#

| show snmp engineID |   |  |
|--------------------|---|--|
| Purpose            | Used to display the identification of the SNMP engine on the Switch.                                |  |
| Syntax             | show snmp engineID  |  |
| Description        | The <b>show snmp engineID</b> command displays the identification of the SNMP engine on the Switch. |  |
| Parameters         | None.   |  |
| Restrictions       | None.   |  |

To display the current name of the SNMP engine on the Switch:

DGS3048#show snmp engineID Command: show snmp engineID

SNMP Engine ID: 0035636666

DGS3048#

| crea | +0      | $\mathbf{a}$ | $\mathbf{n}$ | м     |
|------|---------|--------------|--------------|-------|
|      | T =   T | 3111         |              | ,,,,, |
|      |         |              |              |       |

Purpose Used to create a new SNMP group, or a table that maps SNMP

users to SNMP views.

Syntax create snmp group <groupname 30> [v1 | v2c | v3

<view\_name 30>}

Description The **create snmp group** command creates a new SNMP group, or a

table that maps SNMP users to SNMP views.

Parameters <qroupname 30> – An alphanumeric name of up to 30 characters

that will identify the SNMP group the new SNMP user will be

associated with.

*v1* – Specifies that SNMP version 1 will be used. The Simple Network Management Protocol (SNMP), version 1, is a network management protocol that provides a means to monitor and control network devices.

v2c – Specifies that SNMP version 2c will be used. The SNMP v2c supports both centralized and distributed network management strategies. It includes improvements in the Structure of Management Information (SMI) and adds some security features.

v3 – Specifies that the SNMP version 3 will be used. SNMP v3 provides secure access to devices through a combination of authentication and encrypting packets over the network. SNMP v3 adds:

- Message integrity Ensures that packets have not been tampered with during transit.
- Authentication Determines if an SNMP message is from a valid source.
- Encryption Scrambles the contents of messages to prevent it being viewed by an unauthorized source.

noauth\_nopriv – Specifies that there will be no authorization and no encryption of packets sent between the Switch and a remote SNMP manager.

auth\_nopriv – Specifies that authorization will be required, but there will be no encryption of packets sent between the Switch and a

# create snmp group

remote SNMP manager.

auth\_priv – Specifies that authorization will be required, and that packets sent between the Switch and a remote SNMP manger will be encrypted.

*read\_view* – Specifies that the SNMP group being created can request SNMP messages.

<view\_name 30> - An alphanumeric string of up to 32 characters that is used to identify the group of MIB objects that a remote SNMP manager is allowed to access on the Switch.

*write\_view* – Specifies that the SNMP group being created has write privileges.

<view\_name 30> - An alphanumeric string of up to 32 characters that is used to identify the group of MIB objects that a remote SNMP manager is allowed to access on the Switch.

*notify\_view* – Specifies that the SNMP group being created can receive SNMP trap messages generated by the Switch's SNMP agent.

<view\_name 30> - An alphanumeric string of up to 32 characters that is used to identify the group of MIB objects that a remote SNMP manager is allowed to access on the Switch.

Restrictions

Only administrator-level users can issue this command.

#### Example usage:

To create an SNMP group named "sg1:"

DGS3048#create snmp group sg1 v3 noauth\_nopriv read\_view v1 write view v1 notify view v1

Command: create snmp group sg1 v3 noauth\_nopriv read\_view v1 write view v1 notify view v1

Success.

# delete snmp group

Purpose Used to remove an SNMP group from the Switch.

Syntax delete snmp group <groupname 30>

Description The **delete snmp group** command is used to remove an SNMP

group from the Switch.

Parameters <groupname 30> – An alphanumeric name of up to 30 characters

that will identify the SNMP group the new SNMP user will be

associated with.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To delete the SNMP group named "sg1".

DGS3048#delete snmp group sg1 Command: delete snmp group sg1

Success.

DGS3048#

# show snmp groups

Purpose Used to display the group-names of SNMP groups currently

configured on the Switch. The security model, level, and status of

each group are also displayed.

Syntax show snmp groups

Description The **show snmp groups** command displays the group-names of

SNMP groups currently configured on the Switch. The security

model, level, and status of each group are also displayed.

Parameters None.

Restrictions None.

#### Example usage:

To display the currently configured SNMP groups on the Switch:

DGS3048#show snmp groups

Command: show snmp groups Vacm Access Table Settings

**Total Entries: 10** 

| create snmp  | host  |
|--------------|---|
| Purpose      | Used to create a recipient of SNMP traps generated by the Switch's SNMP agent.  |
| Syntax       | create snmp host <ipaddr> [v1<community_string 20="">   v2c<community_string 20="">   v3 [noauth_nopriv   auth_nopriv   auth_priv]<a href="mailto:auth_priv">auth_string 24&gt;]</a>]</community_string></community_string></ipaddr>                |
| Description  | The <b>create snmp host</b> command creates a recipient of SNMP traps generated by the Switch's SNMP agent.   |
| Parameters   | <ipaddr> – The IP address of the remote management station that will serve as the SNMP host for the Switch.</ipaddr>  |
|              | v1 – Specifies that SNMP version 1 will be used. The Simple<br>Network Management Protocol (SNMP), version 1, is a network<br>management protocol that provides a means to monitor and control<br>network devices.                                  |
|              | v2c – Specifies that SNMP version 2c will be used. The SNMP v2c supports both centralized and distributed network management strategies. It includes improvements in the Structure of Management Information (SMI) and adds some security features. |
|              | v3 – Specifies that the SNMP version 3 will be used. SNMP v3 provides secure access to devices through a combination of authentication and encrypting packets over the network. SNMP v3 adds:   |
|              | <ul> <li>Message integrity – ensures that packets have not been<br/>tampered with during transit.</li> </ul>  |
|              | <ul> <li>Authentication – determines if an SNMP message is from a<br/>valid source.</li> </ul>  |
|              | ■ Encryption – scrambles the contents of messages to prevent it being viewed by an unauthorized source.   |
|              | noauth_nopriv – Specifies that there will be no authorization and no encryption of packets sent between the Switch and a remote SNMP manager.   |
|              | <ul> <li>auth_nopriv – Specifies that authorization will be required, but there will be no encryption of packets sent between the Switch and a remote SNMP manager.</li> </ul>  |
|              | auth_priv – Specifies that authorization will be required, and that<br>packets sent between the Switch and a remote SNMP manger will<br>be encrypted.   |
|              | <auth_sting 24=""> - An alphanumeric string used to authorize a remote SNMP manager to access the Switch's SNMP agent.</auth_sting>   |
| Restrictions | Only administrator-level users can issue this command.  |

To create an SNMP host to receive SNMP messages:

DGS3048#create snmp host 10.48.74.100 v3 auth\_priv public Command: create snmp host 10.48.74.100 v3 auth\_priv public

Success.

DGS3048#

# delete snmp host

Purpose Used to remove a recipient of SNMP traps generated by the Switch's

SNMP agent.

Syntax delete snmp host <ipaddr>

Description The **delete snmp host** command deletes a recipient of SNMP traps

generated by the Switch's SNMP agent.

Parameters <ipaddr> - The IP address of a remote SNMP manager that will

receive SNMP traps generated by the Switch's SNMP agent.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To delete an SNMP host entry:

DGS3048#delete snmp host 10.48.74.100

Command: delete snmp host 10.48.74.100

Success.

DGS3048#

# show snmp host

Purpose Used to display the recipient of SNMP traps generated by the

Switch's SNMP agent.

Syntax show snmp host {<ipaddr>}

Description The **show snmp host** command is used to display the IP addresses

and configuration information of remote SNMP managers that are designated as recipients of SNMP traps that are generated by the

Switch's SNMP agent.

Parameters <ipaddr> - The IP address of a remote SNMP manager that will

receive SNMP traps generated by the Switch's SNMP agent.

Restrictions None.

#### Example usage:

To display the currently configured SNMP hosts on the Switch:

DGS3048#show snmp host Command: show snmp host

**SNMP Host Table** 

Host IP Address SNMP Version Community Name / SNMPv3 User Name

------

 10.48.76.23
 V2c
 private

 10.48.74.100
 V3
 public

**Total Entries: 2** 

DGS3048#

create trusted\_host

Purpose Used to create the trusted host.

Syntax create trusted\_host <ipaddr>

Description The **create trusted\_host** command creates the trusted host. The

Switch allows you to specify up to four IP addresses that are allowed to manage the Switch via in-band SNMP or TELNET based

management software. These IP addresses must be members of the

Management VLAN. If no IP addresses are specified, then there is nothing to prevent any IP address from accessing the Switch.

provided the user knows the Username and Password.

Parameters <ipaddr> - The IP address of the trusted host to be created.

Restrictions Only administrator-level users can issue this command.

Example usage:

To create the trusted host:

DGS3048#create trusted\_host 10.48.74.121

Command: create trusted\_host 10.48.74.121

Success.

DGS3048#

delete trusted host

Purpose Used to delete a trusted host entry made using the **create** 

trusted\_host command above.

Syntax delete trusted \_host <ipaddr>

Description This command is used to delete a trusted host entry made using the

create trusted\_host command above.

Parameters <ipaddr> - The IP address of the trusted host.

Restrictions Only administrator-level users can issue this command.

Example Usage:

To delete a trusted host with an IP address 10.48.74.121:

# DGS-3048 Layer 2 Switch CLI Reference Manual

DGS3048#delete trusted\_host 10.48.74.121 Command: delete trusted\_host 10.48.74.121

Success.

# show trusted\_host

Purpose Used to display a list of trusted hosts entered on the Switch using

the create trusted\_host command above.

Syntax show trusted\_host {<ipaddr>}

Description This command is used to display a list of trusted hosts entered on

the Switch using the create trusted host command above.

Parameters <ipaddr> - The IP address of the trusted host.

Restrictions None.

#### Example Usage:

To display the list of trust hosts:

DGS3048#show trusted\_host

Command: show trusted\_host

**Management Stations** 

IP Address

10.53.13.94

**Total Entries: 1** 

DGS3048#

# enable snmp traps

Purpose Used to enable SNMP trap support.

Syntax enable snmp traps

Description The **enable snmp traps** command is used to enable SNMP trap

support on the Switch.

Parameters None.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To enable SNMP trap support on the Switch:

DGS3048#enable snmp traps

Command: enable snmp traps

Success.

# disable snmp traps

Purpose Used to disable SNMP trap support on the Switch.

Syntax disable snmp traps

Description This command is used to disable SNMP trap support on the

Switch.

Parameters None.

Restrictions Only administrator-level users can issue this command.

#### Example Usage:

To prevent SNMP traps from being sent from the Switch:

DGS3048#disable snmp traps

Command: disable snmp traps

Success.

DGS3048#

# enable snmp authenticate trap

Purpose Used to enable SNMP authentication trap support.

Syntax enable snmp authenticate trap

Description This command is used to enable SNMP authentication trap

support on the Switch.

Parameters None.

Restrictions Only administrator-level users can issue this command.

#### Example Usage:

To turn on SNMP authentication trap support:

DGS3048#enable snmp authenticate trap

Command: enable snmp authenticate trap

Success.

DGS3048#

# disable snmp authenticate trap

Purpose Used to disable SNMP authentication trap support.

Syntax disable snmp authenticate trap

Description This command is used to disable SNMP authentication support on

the Switch.

Parameters None.

# disable snmp authenticate trap

Restrictions Only administrator-level users can issue this command.

#### Example Usage:

To disable the SNMP authentication trap support:

DGS3048#disable snmp authenticate trap Command: disable snmp authenticate trap

Success.

DGS3048#

# show snmp traps

Purpose Used to show SNMP trap support on the Switch.

Syntax show snmp traps

Description This command is used to view the SNMP trap support status

currently configured on the Switch.

Parameters None.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To view the current SNMP trap support:

DGS3048#show snmp traps Command: show snmp traps

SNMP Traps : Enabled Authenticate Trap : Enabled

DGS3048#

# config snmp system\_contact

Purpose Used to enter the name of a contact person who is responsible for

the Switch.

Syntax config snmp system\_contact {<sw\_contact>}

Description The **config snmp system contact** command is used to enter the

name and/or other information to identify a contact person who is responsible for the Switch. A maximum of 255 character can be

used.

Parameters <sw\_contact> - A maximum of 255 characters is allowed. A NULL

string is accepted if there is no contact.

Restrictions Only administrator-level users can issue this command.

Example usage:

To configure the Switch contact to "MIS Department II":

DGS3048#config snmp system\_contact MIS Department II Command: config snmp system\_contact MIS Department II

Success.

DGS3048#

| config snmp system_location |   |  |
|-----------------------------|---|--|
| Purpose                     | Used to enter a description of the location of the Switch.  |  |
| Syntax                      | <pre>config snmp system_location {<sw_location>}</sw_location></pre>  |  |
| Description                 | The <b>config snmp system_location</b> command is used to enter a description of the location of the Switch. A maximum of 255 characters can be used. |  |
| Parameters                  | <sw_location> - A maximum of 255 characters is allowed. A NULL string is accepted if there is no location desired.</sw_location>                      |  |
| Restrictions                | Only administrator-level users can issue this command   |  |

#### Example usage:

To configure the Switch location for "HQ 5F":

DGS3048#config snmp system\_location HQ 5F Command: config snmp system\_location HQ 5F

Success.

DGS3048#

| config snmp system_name |  |  |
|-------------------------|--|--|
| Purpose                 | Used to configure the name for the Switch.   |  |
| Syntax                  | config snmp system_name { <sw_name>}</sw_name>   |  |
| Description             | The <b>config snmp system_name</b> command configures the name of the Switch.                                  |  |
| Parameters              | <sw_name> - A maximum of 255 characters is allowed. A NULL string is accepted if no name is desired.</sw_name> |  |
| Restrictions            | Only administrator-level users can issue this command.   |  |

#### Example usage:

To configure the Switch name for "DGS3048 Switch":

# **DGS-3048 Layer 2 Switch CLI Reference Manual**

DGS3048#config snmp system\_name DGS3048 Switch Command: config snmp system\_name DGS3048 Switch

Success.

# DOWNLOAD/UPLOAD COMMANDS

The download/upload commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command  | Parameters   |
|----------|--|
| download | [firmware <ipaddr> <path_filename 64="">   boot <ipaddr> <path_filename 64="">   configuration <ipaddr> <path_filename 64="">   startup   running}]</path_filename></ipaddr></path_filename></ipaddr></path_filename></ipaddr> |
| upload   | configuration <ipaddr> <path_filename 64=""> {startup   running}</path_filename></ipaddr>  |

Each command is listed, in detail, in the following sections.

| download     |   |
|--------------|---|
| download     |   |
| Purpose      | Used to download and install new firmware or a switch configuration file from a TFTP server.  |
| Syntax       | download [firmware [firmware <ipaddr> <path_filename 64="">  </path_filename></ipaddr>  |
|              | boot <ipaddr> <path_filename 64="">  </path_filename></ipaddr>  |
|              | configuration <ipaddr> <path_filename 64=""> {startup   running}]</path_filename></ipaddr>  |
| Description  | This command is used to download a new firmware or a switch configuration file from a TFTP server.  |
| Parameters   | firmware – Download and install new firmware on the Switch from a TFTP server.  |
|              | configuration – Download a switch configuration file from a TFTP server.  |
|              | <pre><ipaddr> - The IP address of the TFTP server.</ipaddr></pre>   |
|              | <pre><path_filename> - The DOS path and filename of the firmware or<br/>switch configuration file on the TFTP server. For example,<br/>C:\3048.had.</path_filename></pre>   |
|              | increment – Allows the download of a partial switch configuration file. This allows a file to be downloaded that will change only the Switch parameters explicitly stated in the configuration file. All other switch parameters will remain unchanged. |
|              | startup – Indicates the Startup Configuration file.   |
|              | running – Indicates the Running Configuration file.   |
| Restrictions | The TFTP server must be on the same IP subnet as the Switch. Only administrator-level users can issue this command.   |

To download a firmware file:

DGS3048#download firmware 10.48.74.121 c:\DGS3048 b08.had Command: download firmware 10.48.74.121 c:\DGS3048 b08.had

Connecting to server...... Done.

Download firmware...... Done. Do not power off!

Please wait, programming flash...... Done. Saving current settings to NV-RAM.....Done.

Please wait, the switch is rebooting....

#### Example usage:

To download a configuration file:

DGS3048#download configuration 10.48.74.121 c:\cfg\setting.txt Command: download configuration 10.48.74.121 c:\cfg\setting.txt

Connecting to server...... Done. Download configuration...... Done.

| upload       |  |
|--------------|--|
| Purpose      | Used to upload the current switch settings or the Switch history log to a TFTP server.   |
| Syntax       | upload configuration <ipaddr> <path_filename 64=""> {startup   running}</path_filename></ipaddr>   |
| Description  | This command is used to upload either the Switch's current settings or the Switch's history log to a TFTP server.  |
| Parameters   | configuration – Specifies that the Switch's current settings will be uploaded to the TFTP server.  |
|              | <ipaddr> – The IP address of the TFTP server. The TFTP server must be on the same IP subnet as the Switch.</ipaddr>  |
|              | <path_filename 64=""> – Specifies the location of the Switch configuration file on the TFTP server. This file will be replaced by the uploaded file from the Switch.</path_filename> |
|              | startup – Indicates the Startup Configuration file.  |
|              | running – Indicates the Running Configuration file   |
| Restrictions | The TFTP server must be on the same IP subnet as the Switch. Only administrator-level users can issue this command.  |

To upload a log file:

| DGS3048#upload log 10.48.74.121 c:\cfg\log.txt  |  |
|---|--|
| Command: upload log 10.48.74.121 c:\cfg\log.txt |  |
| Connecting to server Done.                      |  |
| Upload configurationDone.                       |  |
| DGS3048#  |  |

# Example usage:

To upload a configuration file:

| Command: upload configuration 10.48.74.121 c:\cfg\setting.tx  Connecting to server Done. | DGS3048#upload configurat | tion 10.48.74.121 c:\cfg\setting.txt  |
|--|---------------------------|---------------------------------------|
| Connecting to server Done.   | Command: upload configura | ation 10.48.74.121 c:\cfg\setting.txt |
|  | Connecting to server      | Done.                                 |
| Upload configurationDone.  | Upload configuration      | Done.                                 |
|  | )GS3048#                  |                                       |

# **NETWORK MONITORING COMMANDS**

The network monitoring commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command            | Parameters  |
|--------------------|---|
| show packet ports  | <portlist></portlist>   |
| show error ports   | <portlist></portlist>   |
| show utilization   |   |
| clear counters     |   |
| clear log          |   |
| show log           | {index <value>}</value>   |
| enable syslog      |   |
| disable syslog     |   |
| show syslog        |   |
| create syslog host | <index 1-4=""> ipaddress <ipaddr> {severity [informational   warning   all]   facility [local0   local1  local2   local3   local4   local5   local6   local7]   udp_port <udp_port_number>}</udp_port_number></ipaddr></index>            |
| config syslog host | [all   <index 1-4="">] {severity [informational   warning   all]   facility [local0   local1   local2   local3   local4   local5   local6   local7]   udp_port <udp_port_number>   ipaddress <ipaddr>}</ipaddr></udp_port_number></index> |
| delete syslog host | [ <index 1-4="">   all]</index>   |
| show syslog host   | { <index 1-4="">}</index>   |

Each command is listed, in detail, in the following sections.

| show packet ports |  |  |
|-------------------|--|--|
| Purpose           | Used to display statistics about the packets sent and received by the Switch.  |  |
| Syntax            | show packet ports <portlist></portlist>  |  |
| Description       | This command is used to display statistics about packets sent and received by ports specified in the port list. The results are separated into three tables, labeled <b>A</b> , <b>B</b> , and <b>C</b> in the window above. Table <b>A</b> is relevant to the size of the packets, Table <b>B</b> is relevant to the type of packets and Table <b>C</b> is relevant to the type of frame associated with these packets. |  |
| Parameters        | <portlist> – Specifies a port or range of ports to be displayed.</portlist>  |  |
| Restrictions      | None.  |  |

#### Example usage:

To display the packets analysis for port 7:

| DGS3048#sho                  | w packet pe  | orts 7                      |            |        |           |
|------------------------------|--------------|-----------------------------|------------|--------|-----------|
| Command: show packet ports 7 |              |                             |            |        |           |
| Port number :                | 7            | A                           |            | В      |           |
| Frame Size                   | Frame Cou    | unts Frames/sec             | Frame Type | Total  | Total/sec |
| 64                           | 3275         | 10                          | RX Bytes   | 408973 | 1657      |
| 65-127                       | 755          | 10                          | RX Frames  | 4395   | 19        |
| 128-255                      | 316          | 1                           |            |        |           |
| 256-511                      | 145          | 0                           | TX Bytes   | 7918   | 178       |
| 512-1023                     | 15           | 0                           | TX Frames  | 111    | 2         |
| 1024-1518                    | 0            | 0                           |            |        |           |
|                              |              | С                           |            |        |           |
| Unicast RX                   | 152          | 1                           |            |        |           |

| clear counters |  |  |  |  |
|----------------|--|--|--|--|
| Purpose        | Used to clear the Switch's statistics counters.                                |  |  |  |
| Syntax         | clear counters   |  |  |  |
| Description    | This command will clear the counters used by the Switch to compile statistics. |  |  |  |
| Parameters     | None.  |  |  |  |
| Restrictions   | Only administrator-level users can issue this command.                         |  |  |  |

# Example usage:

To clear the counters:

| DGS3048#clear counters  |  |
|-------------------------|--|
| Command: clear counters |  |

Success.

DGS3048#

| clear log    |  |
|--------------|--|
| Purpose      | Used to clear the Switch's history log.                |
| Syntax       | clear log  |
| Description  | This command will clear the Switch's history log.      |
| Parameters   | None.  |
| Restrictions | Only administrator-level users can issue this command. |

# Example usage:

To clear the log information:

DGS3048#clear log Command: clear log

Success.

DGS3048#

| show log     |  |
|--------------|--|
| Purpose      | Used to display the Switch history log.  |
| Syntax       | show log {index <value>}</value>   |
| Description  | This command will display the contents of the Switch's history log.  |
| Parameters   | index <value> – The show log command will display the history log until the log number reaches this value.</value> |
| Restrictions | None.  |

# Example usage:

To display the Switch history log:

| DGS30           | DGS3048##show log   |  |  |  |  |  |
|-----------------|---------------------|--|--|--|--|--|

| D 0 0 0 1 0 1 1 |                     |  |  |  |  |  |
| DGS3048#        |                     |  |  |  |  |  |

| enable syslog |  |  |  |  |
|---------------|--|--|--|--|
| Purpose       | Used to enable the system log to be sent to a remote host. |  |  |  |
| Syntax        | enable syslog  |  |  |  |

#### DGS-3048 Layer 2 Switch CLI Reference Manual

| Description  | The <b>enable syslog</b> command enables the system log to be sent to a remote host. |
|--------------|--|
| Parameters   | None.  |
| Restrictions | Only administrator-level users can issue this command.                               |

#### Example usage:

To the syslog function on the Switch:

DGS3048#enable syslog
Command: enable syslog
Success.
DGS3048#

| disable syslog |   |  |  |  |
|----------------|---|--|--|--|
| Purpose        | Used to enable the system log to be sent to a remote host.                            |  |  |  |
| Syntax         | disable syslog  |  |  |  |
| Description    | The <b>disable syslog</b> command enables the system log to be sent to a remote host. |  |  |  |
| Parameters     | None.   |  |  |  |
| Restrictions   | Only administrator-level users can issue this command.                                |  |  |  |

#### Example usage:

To disable the syslog function on the Switch:

DGS3048#disable syslog Command: disable syslog Success. DGS3048#

| show syslog  |   |
|--------------|---|
| Purpose      | Used to display the syslog protocol status as enabled or disabled.                |
| Syntax       | show syslog   |
| Description  | The <b>show syslog</b> command displays the syslog status as enabled or disabled. |
| Parameters   | None.   |
| Restrictions | None.   |

#### Example usage:

To display the current status of the syslog function:

| DGS3048#show syslog  |  |
|----------------------|--|
| Command: show syslog |  |

Syslog Global State: Enabled

| create syslog | host  |   |  |  |  |
|---------------|---|---|--|--|--|
| Purpose       | Used to create a new syslog host.   |   |  |  |  |
| Syntax        | create syslog host <index 1-4=""> ipaddress <ipaddr> {severity [informational   warning   all   facility [local0   local1  local2   local3   local4   local5   local6   local7]   udp_port <udp_port_number></udp_port_number></ipaddr></index> |   |  |  |  |
| Description   | The <b>create sy</b> host.  | rslog host command is used to create a new syslog   |  |  |  |
| Parameters    | all – Specifies   | that the command will be applied to all hosts.  |  |  |  |
|               |   | <index 1-4=""> – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.</index>   |  |  |  |
|               |   | addr> - Specifies the IP address of the remote host messages will be sent.  |  |  |  |
|               | severity – Sev<br>following:  | verity level indicator. These are described in the  |  |  |  |
|               | <b>Bold</b> font indicated supported on   | cates that the corresponding severity level is currently the Switch.  |  |  |  |

|               | •            | cifies that local use 2 messages will be sent to the This corresponds to number 18 from the list above.   |
|               |              | cifies that local use 3 messages will be sent to the This corresponds to number 19 from the list above.   |
|               | •            | cifies that local use 4 messages will be sent to the This corresponds to number 20 from the list above.   |
|               |              | cifies that local use 5 messages will be sent to the This corresponds to number 21 from the list above.   |
|               |              | cifies that local use 6 messages will be sent to the This corresponds to number 22 from the list above.   |
|               | •            | cifies that local use 7 messages will be sent to the This corresponds to number 23 from the list above.   |
|               |              | dp_port_number> - Specifies the UDP port number that otocol will use to send messages to the remote host. |
|               |              | e   disable] – Allows the sending of syslog messages to ost, specified above, to be enabled and disabled. |
| Restrictions  | Only adminis | trator-level users can issue this command.  |

To create syslog host:

DGS3048#create syslog host 1 ipaddress 10.53.13.94 severity all facility local0 Command: create syslog host 1 ipaddress 10.53.13.94 severity all facility local0

Success.

| config sysle | og host   |
|--------------|---|
| Purpose      | Used to configure the syslog protocol to send system log data to a remote host.   |
| Syntax       | config syslog host [all   <index 1-4="">] {severity [informational   warning   all]   facility [local0   local1   local2   local3   local4   local5   local6   local7]   udp_port <udp_port_number>   ipaddress <ipaddr>}</ipaddr></udp_port_number></index>  |
| Description  | The <b>config syslog host</b> command is used to configure the syslog protocol to send system log information to a remote host.   |
| Parameters   | all – Specifies that the command will be applied to all hosts.  |
|              | <index 1-4=""> – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.</index>   |
|              | severity – Severity level indicator. These are described in the following:  |
|              | Bold font indicates that the corresponding severity level is currently supported on the Switch.  Numerical Severity Code  0 Emergency: system is unusable 1 Alert: action must be taken immediately 2 Critical: critical conditions 3 Error: error conditions 4 Warning: warning conditions 5 Notice: normal but significant condition 6 Informational: informational messages 7 Debug: debug-level messages informational – Specifies that informational messages will be sent to the remote host. This corresponds to number 6 from the list above.  warning – Specifies that warning messages will be sent to the remote host. This corresponds to number 4 from the list above. |
|              | <ul> <li>all – Specifies that all of the currently supported syslog messages that are generated by the Switch will be sent to the remote host.</li> <li>facility – Some of the operating system daemons and processes have been assigned Facility values. Processes and daemons that have not been explicitly assigned a Facility may use any of the "local use" facilities or they may use the "user-level" Facility. Those Facilities that have been designated are shown in the following:</li> <li>Bold font indicates the facility values the Switch currently supports.</li> </ul>  |
|              | Numerical Facility Code 0 kernel messages 1 user-level messages 2 mail system 3 system daemons 4 security/authorization messages 5 messages generated internally by syslog 6 line printer subsystem 7 network news subsystem  |

| config syslog | g host  |
|---------------|---|
|               | 8 UUCP subsystem 9 clock daemon 10 security/authorization messages 11 FTP daemon 12 NTP subsystem 13 log audit 14 log alert 15 clock daemon 16 local use 0 (local0) 17 local use 1 (local1) 18 local use 2 (local2) 19 local use 3 (local3) 20 local use 4 (local4) 21 local use 5 (local5) 22 local use 7 (local7) |
|               | local0 – Specifies that local use 0 messages will be sent to the remote host. This corresponds to number 16 from the list above.  |
|               | local1 – Specifies that local use 1 messages will be sent to the remote host. This corresponds to number 17 from the list above.  |
|               | local2 – Specifies that local use 2 messages will be sent to the remote host. This corresponds to number 18 from the list above.  |
|               | local3 – Specifies that local use 3 messages will be sent to the remote host. This corresponds to number 19 from the list above.  |
|               | local4 – Specifies that local use 4 messages will be sent to the remote host. This corresponds to number 20 from the list above.  |
|               | local5 – Specifies that local use 5 messages will be sent to the remote host. This corresponds to number 21 from the list above.  |
|               | local6 – Specifies that local use 6 messages will be sent to the remote host. This corresponds to number 22 from the list above.  |
|               | local7 – Specifies that local use 7 messages will be sent to the remote host. This corresponds to number 23 from the list above.  |
|               | <pre>udp_port <udp_port_number> - Specifies the UDP port number that the syslog protocol will use to send messages to the remote host.</udp_port_number></pre>  |
|               | ipaddress <ipaddr> – Specifies the IP address of the remote host where syslog messages will be sent.</ipaddr>   |
|               | state [enable   disable] – Allows the sending of syslog messages to the remote host, specified above, to be enabled and disabled.   |
| Restrictions  | Only administrator-level users can issue this command.  |

To configure a syslog host:

DGS3048#config syslog host all severity all facility local0
Command: config syslog host all severity all facility local0
Success.
DGS3048#

| delete syslog host |   |  |
|--------------------|---|--|
| Purpose            | Used to remove a syslog host, that has been previously configured, from the Switch.   |  |
| Syntax             | delete syslog host [ <index 1-4="">   all]</index>  |  |
| Description        | The <b>delete syslog host</b> command is used to remove a syslog host that has been previously configured from the Switch.                        |  |
| Parameters         | <index 1-4=""> – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.</index> |  |
|                    | all – Specifies that the command will be applied to all hosts.  |  |
| Restrictions       | Only administrator-level users can issue this command.  |  |

To delete a previously configured syslog host:

DGS3048#delete syslog host 4 Command: delete syslog host 4

Success.

DGS3048#

| show syslog host |   |  |
|------------------|---|--|
| Purpose          | Used to display the syslog hosts currently configured on the Switch.  |  |
| Syntax           | show syslog host { <index 1-4="">}</index>  |  |
| Description      | The <b>show syslog host</b> command is used to display the syslog hosts that are currently configured on the Switch.                              |  |
| Parameters       | <index 1-4=""> – Specifies that the command will be applied to an index of hosts. There are four available indexes, numbered 1 through 4.</index> |  |
| Restrictions     | None.   |  |

# Example usage:

To show Syslog host information:

# DGS-3048 Layer 2 Switch CLI Reference Manual

DGS3048#show syslog host

Command: show syslog host

Syslog Global State: Disabled

| Host Id | <b>Host IP Address</b> | Severity | Facility | UDP port |
|---------|------------------------|----------|----------|----------|
|         |                        |          |          |          |

# MULTIPLE SPANNING TREE PROTOCOL (MSTP) COMMANDS

This switch supports three versions of the Spanning Tree Protocol; 802.1d STP, 802.1w Rapid STP and 802.1s MSTP. Multiple Spanning Tree Protocol, or MSTP, is a standard defined by the IEEE community that allows multiple VLANs to be mapped to a single spanning tree instance, which will provide multiple pathways across the network. Therefore, these MSTP configurations will balance the traffic load, preventing wide scale disruptions when a single spanning tree instance fails. This will allow for faster convergences of new topologies for the failed instance. Frames designated for these VLANs will be processed quickly and completely throughout interconnected bridges utilizing either of the three spanning tree protocols (STP, RSTP or MSTP). This protocol will also tag BDPU packets so receiving devices can distinguish spanning tree instances, spanning tree regions and the VLANs associated with them. These instances will be classified by an *instance\_id*. MSTP will connect multiple spanning trees with a Common and Internal Spanning Tree (CIST). The CIST will automatically determine each MSTP region, its maximum possible extent and will appear as one virtual bridge that runs a single spanning tree. Consequentially, frames assigned to different VLANs will follow different data routes within administratively established regions on the network, continuing to allow simple and full processing of frames, regardless of administrative errors in defining VLANs and their respective spanning trees. Each switch utilizing the MSTP on a network will have a single MSTP configuration that will have the following three attributes:

- a) A configuration name defined by an alphanumeric string of up to 32 characters (defined in the *config stp mst\_config\_id* command as *name* < *string*>).
- b) A configuration revision number (named here as a revision\_level) and;
- c) A 4096 element table (defined here as a *vid\_range*) which will associate each of the possible 4096 VLANs supported by the Switch for a given instance.

To utilize the MSTP function on the Switch, three steps need to be taken:

- a) The Switch must be set to the MSTP setting (config stp version)
- b) The correct spanning tree priority for the MSTP instance must be entered (config stp priority).
- c) VLANs that will be shared must be added to the MSTP Instance ID (config stp instance id).

The Multiple Spanning Tree Protocol commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command                 | Parameters  |  |
|-------------------------|---|--|
| enable stp              |   |  |
| disable stp             |   |  |
| config stp version      | [mstp   rstp   stp]   |  |
| config stp              | {maxage <value 6-40="">   maxhops <value 1-20="">   hellotime <value 1-10="">   forwarddelay <value 4-30="">  fbpdu [enable   disable]}</value></value></value></value> |  |
| config stp ports        | <portlist> {externalCost [auto   <value 1-200000000="">]   edge [true   false]   p2p [true   false   auto ]   state [enable   disable]}</value></portlist>              |  |
| config stp instance _id | <value 1-15=""> [add_vlan   remove_vlan] <vidlist></vidlist></value>  |  |
| config stp priority     | <value 0-61440=""> instance_id <value 0-15=""></value></value>  |  |
| config stp              | {revision_level <int 0-65535="">   name <string>}</string></int>  |  |

# DGS-3048 Layer 2 Switch CLI Reference Manual

| Command                | Parameters  |
|------------------------|---|
| mst_config_id          |   |
| config stp mst_ports   | <pre><portlist> instance_id <value 0-15=""> {internalCost [auto   value 1-<br/>200000000]   priority <value 0-240="">}</value></value></portlist></pre> |
| show stp               |   |
| show stp ports         | { <portlist>}</portlist>  |
| show stp instance_id   | { <value 0-15="">}</value>  |
| show stp mst_config id |   |

Each command is listed, in detail, in the following sections.

| enable stp   |  |
|--------------|--|
| Purpose      | Used to globally enable STP on the Switch.   |
| Syntax       | enable stp   |
| Description  | This command allows the Spanning Tree Protocol to be globally enabled on the Switch. |
| Parameters   | None.  |
| Restrictions | Only administrator-level users can issue this command.                               |

# Example usage:

To enable STP, globally, on the Switch:

| DGS3048#enable stp  |  |
|---------------------|--|
| Command: enable stp |  |
| Success.            |  |
| DGS3048#            |  |

| disable stp  |   |
|--------------|---|
| Purpose      | Used to globally disable STP on the Switch.   |
| Syntax       | disable stp   |
| Description  | This command allows the Spanning Tree Protocol to be globally disabled on the Switch. |
| Parameters   | None.   |
| Restrictions | Only administrator-level users can issue this command.                                |

# Example usage:

To disable STP on the Switch:

| DGS3048#disable stp |
|---------------------|
|---------------------|

Command: disable stp

Success.

DGS3048#

| config stp version |  |  |
|--------------------|--|--|
| Purpose            | Used to globally set the version of STP on the Switch.   |  |
| Syntax             | config stp version [mstp   rstp   stp]   |  |
| Description        | This command allows the user to choose the version of the spanning tree to be implemented on the Switch.               |  |
| Parameters         | mstp – Selecting this parameter will set the Multiple Spanning Tree Protocol (MSTP) globally on the Switch.            |  |
|                    | rstp - Selecting this parameter will set the Rapid Spanning Tree Protocol (RSTP) globally on the Switch.               |  |
|                    | <ul><li>stp - Selecting this parameter will set the Spanning Tree Protocol<br/>(STP) globally on the Switch.</li></ul> |  |
| Restrictions       | Only administrator-level users can issue this command.   |  |

#### Example usage:

To set the Switch globally for the Multiple Spanning Tree Protocol (MSTP):

DGS3048#config stp version mstp Command: config stp version mstp

Success.

| config stp  |  |
|-------------|--|
| Purpose     | Used to setup STP, RSTP and MSTP on the Switch.  |
| Syntax      | config stp {maxage <value 6-40="">   maxhops <value 1-20="">  <br/>hellotime <value 1-10="">   forwarddelay <value 4-30="">   fbpdu<br/>[enable   disable]}</value></value></value></value>  |
| Description | This command is used to setup the Spanning Tree Protocol (STP) for the entire switch. All commands here will be implemented for the STP version that is currently set on the Switch.   |
| Parameters  | maxage <value 6-40=""> — This value may be set to ensure that old information does not endlessly circulate through redundant paths in the network, preventing the effective propagation of the new information. Set by the Root Bridge, this value will aid in determining that the Switch has spanning tree configuration values consistent with other devices on the bridged LAN. If the value ages out and a BPDU has still not been received from the Root Bridge, the Switch will start sending its own BPDU to all other switches for permission to become the Root Bridge. If it turns out that your switch has the lowest Bridge Identifier, it will</value> |

| config stp   |  |
|--------------|--|
|              | become the Root Bridge. The user may choose a time between 6 and 40 seconds. The default value is 20.  |
|              | maxhops <value 1-20=""> - The number of hops between devices in a spanning tree region before the BPDU (bridge protocol data unit) packet sent by the Switch will be discarded. Each switch on the hop count will reduce the hop count by one until the value reaches zero. The Switch will then discard the BDPU packet and the information held for the port will age out. The user may set a hop count from 1 to 20. The default is 20.</value> |
|              | hellotime <value 1-10=""> — The user may set the time interval between transmission of configuration messages by the root device in STP, or by the designated router in RSTP, thus stating that the Switch is still functioning. A time between 1 and 10 seconds may be chosen, with a default setting of 2 seconds.</value>   |
|              | In MSTP, the spanning tree is configured by port and therefore, the <i>hellotime</i> must be set using the <b>configure stp ports</b> command for switches utilizing the Multiple Spanning Tree Protocol.  |
|              | forwarddelay <value 4-30=""> – The maximum amount of time (in seconds) that the root device will wait before changing states. The user may choose a time between 4 and 30 seconds. The default is 15 seconds.</value>  |
|              | fbpdu [enable   disable] – Allows the forwarding of STP BPDU packets from other network devices when STP is disabled on the Switch. The default is enable.   |
| Restrictions | Only administrator-level users can issue this command.   |

To configure STP with maxage 18 and maxhops of 15:

DGS3048#config stp maxage 18 maxhops 15 Command: config stp maxage 18 maxhops 15

Success.

| config stp ports |  |  |
|------------------|--|--|
| Purpose          | Used to setup STP on the port level.   |  |
| Syntax           | config stp ports <portlist> {externalCost [auto   <value 1-<br="">200000000&gt;]   edge [true   false]   p2p [true   false   auto ]  <br/>state [enable   disable]}</value></portlist>   |  |
| Description      | This command is used to create and configure STP for a group of ports.   |  |
| Parameters       | <portlist> – Specifies a range of ports to be configured. The port list is specified by listing the lowest switch number and the beginning port number on that switch, separated by a colon. Then the highest switch number, and the highest port number of the</portlist> |  |

# config stp ports

range (also separated by a colon) are specified. The beginning and end of the port list range are separated by a dash. For example, 1:3 specifies switch number 1, port 3. 2:4 specifies switch number 2, port 4. 1:3-2:4 specifies all of the ports between switch 1, port 3 and switch 2, port 4 – in numerical order.

externalCost – This defines a metric that indicates the relative cost of forwarding packets to the specified port list. Port cost can be set automatically or as a metric value. The default value is *auto*.

- auto Setting this parameter for the external cost will automatically set the speed for forwarding packets to the specified port(s) in the list for optimal efficiency. Default port cost: 100Mbps port = 200000. Gigabit port = 20000.
- <value 1-200000000> Define a value between 1 and 200000000 to determine the external cost. The lower the number, the greater the probability the port will be chosen to forward packets.

hellotime <value 1-10> – The time interval between transmission of configuration messages by the designated port, to other devices on the bridged LAN, thus stating that the Switch is still functioning. The user may choose a time between 1 and 10 seconds. The default is 2 seconds.

edge [true | false] – true designates the port as an edge port. Edge ports cannot create loops, however an edge port can lose edge port status if a topology change creates a potential for a loop. An edge port normally should not receive BPDU packets. If a BPDU packet is received it automatically loses edge port status. false indicates that the port does not have edge port status.

p2p [true | false | auto] – true indicates a point-to-point (P2P) shared link. P2P ports are similar to edge ports however they are restricted in that a P2P port must operate in full-duplex. Like edge ports, P2P ports transition to a forwarding state rapidly thus benefiting from RSTP. A p2p value of false indicates that the port cannot have p2p status. auto allows the port to have p2p status whenever possible and operate as if the p2p status were true. If the port cannot maintain this status (for example if the port is forced to half-duplex operation) the p2p status changes to operate as if the p2p value were false. The default setting for this parameter is disabled.

state [enable | disable] – Allows STP to be enabled or disabled for the ports specified in the port list. The default is *enable*.

Restrictions

Only administrator-level users can issue this command.

#### Example usage:

To configure STP with path cost 19, hellotime set to 5 seconds and state enable for ports 1-5 of module 1.

DGS3048#config stp ports 1:1-1:5 externalCost 19 hellotime 5 state enable

Command: config stp ports 1:1-1:5 externalCost 19 hellotime 5 state enable

Success.

DGS3048#

# config stp instance\_id

Purpose Used to add or delete an STP instance ID.

Syntax config stp instance\_id <value 1-15> [add\_vlan | remove\_vlan]

<vidlist>

Description This command is used to map VIDs (VLAN IDs) to previously

configured STP instances on the Switch by creating an

instance\_id. A STP instance may have multiple members with the same MSTP configuration. There is no limit to the number of STP regions in a network but each region only supports a maximum of 16 spanning tree instances (one unchangeable default entry). VIDs can belong to only one spanning tree instance at a time.

Note that switches in the same spanning tree region having the same STP *instance\_id* must be mapped identically, and have the same configuration *revision\_level* number and the same *name*.

Parameters <value 0-15> - Enter a number between 1 and 15 to define the

instance\_id. The Switch supports 16 STP regions with one

unchangeable default instance ID set as 0.

 add\_vlan - Along with the vid\_range <vidlist> parameter, this command will add VIDs to the previously configured STP instance id

instance\_id.

• remove\_vlan – Along with the vid\_range <vidlist>
parameter, this command will remove VIDs to the previously

configured STP instance\_id.

 <vidlist> - Specify the VID range from configured VLANs set on the Switch. Supported VIDs on the Switch range from

ID number 1 to 4094.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To configure instance id 2 to add VID 10:

DGS3048#config stp instance\_id 2 add\_vlan 10 Command : config stp instance\_id 2 add\_vlan 10

Success.

DGS3048#

## Example usage:

To remove VID 10 from instance id 2:

DGS3048#config stp instance\_id 2 remove\_vlan 10 Command : config stp instance\_id 2 remove\_vlan 10

Success.

| config stp priority |  |
|---------------------|--|
| Purpose             | Used to update the STP instance configuration.   |
| Syntax              | config stp priority <value 0-61440=""> instance_id <value 0-15=""></value></value>   |
| Description         | This command is used to update the STP instance configuration settings on the Switch. The MSTP will utilize the priority in selecting the root bridge, root port and designated port. Assigning higher priorities to STP regions will instruct the Switch to give precedence to the selected <code>instance_id</code> for forwarding packets. The lower the priority value set, the higher the priority. |
| Parameters          | priority <value 0-61440=""> - Select a value between 0 and 61440 to specify the priority for a specified instance id for forwarding packets. The lower the value, the higher the priority. This entry must be divisible by 4096.</value>   |
|                     | instance_id <value 0-15=""> - Enter the value corresponding to the previously configured instance id of which the user wishes to set the priority value. An instance id of 0 denotes the default instance_id (CIST) internally set on the Switch.</value>  |
| Restrictions        | Only administrator-level users can issue this command.   |

To set the priority value for *instance\_id* 2 as 4096:

DGS3048#config stp priority 4096 instance\_id 2 Command : config stp priority 4096 instance\_id 2

Success.

| config stp mst_config_id |   |
|--------------------------|---|
| Purpose                  | Used to update the MSTP configuration identification.   |
| Syntax                   | <pre>config stp mst_config_id {revision_level <int 0-65535="">   name <string></string></int></pre>   |
| Description              | This command will uniquely identify the MSTP configuration currently configured on the Switch. Information entered here will be attached to BDPU packets as an identifier for the MSTP region to which it belongs. Switches having the same <code>revision_level</code> and <code>name</code> will be considered as part of the same MSTP region. |
| Parameters               | revision_level <int 0-65535="">— Enter a number between 0 and 65535 to identify the MSTP region. This value, along with the name will identify the MSTP region configured on the Switch. The default setting is 0.</int>  |
|                          | name <string> - Enter an alphanumeric string of up to 32 characters to uniquely identify the MSTP region on the Switch. This name, along with the revision_level value will identify the MSTP region configured on the Switch. If no name is entered, the default name will be the MAC address of the device.</string>                            |
| Restrictions             | Only administrator-level users can issue this command.  |

To configure the MSTP region of the Switch with revision\_level 10 and the name "Trinity":

DGS3048#config stp mst\_config\_id revision\_level 10 name Trinity Command : config stp mst\_config\_id revision\_level 10 name Trinity

Success.

DGS3048#

# config stp mst\_ports

Purpose Used to update the port configuration for a MSTP instance.

Syntax config stp mst\_ports <portlist> instance\_id <value 0-15>

{internalCost [auto | value 1-200000000] | priority <value 0-

240>}

Description This command will update the port configuration for a STP

instance\_id. If a loop occurs, the MSTP function will use the port priority to select an interface to put into the forwarding state. Set a higher priority value for interfaces to be selected for forwarding first. In instances where the priority value is identical, the MSTP function will implement the lowest port number into the forwarding state and other interfaces will be blocked. Remember that lower

priority values mean higher priorities for forwarding packets.

port list is specified by listing the lowest switch number and the beginning port number on that switch, separated by a colon. Then the highest switch number, and the highest port number of the range (also separated by a colon) are specified. The beginning and end of the port list range are separated by a dash. For example, 1:3 specifies switch number 1, port 3. 2:4 specifies switch number 2, port 4. 1:3-2:4 specifies all of the ports between

switch 1, port 3 and switch 2, port 4 – in numerical order.

instance\_id <value 0-15> - Enter a numerical value between 0 and 15 to identify the instance\_id previously configured on the Switch. An entry of 0 will denote the CIST (Common and Internal

Spanning Tree.

internalCost – This parameter is set to represent the relative cost of forwarding packets to specified ports when an interface is selected within a STP instance. The default setting is *auto*. There

are two options:

 auto – Selecting this parameter for the internalCost will set quickest route automatically and optimally for an interface. The default value is derived from the media speed

of the interface.

 value 1-2000000 – Selecting this parameter with a value in the range of 1-2000000 will set the quickest route when a loop occurs. A lower internalCost represents a quicker

transmission.

priority <value 0-240> - Enter a value between 0 and 240 to set the priority for the port interface. A higher priority will designate the interface to forward packets first. A lower number denotes a

| config stp mst_ports |  |
|----------------------|--|
|                      | higher priority.                                       |
| Restrictions         | Only administrator-level users can issue this command. |

To designate ports 1 through 5 on module one, with instance ID 2, to have an auto internalCost and a priority of 16:

DGS3048#config stp mst\_config\_id ports 1:1-1:5 instance\_id 2 internalCost auto priority 16

Command : config stp mst\_config\_id ports 1:1-1:5 instance\_id 2 internalCost auto priority 16

Success.

DGS3048#

| show stp     |   |
|--------------|---|
| Purpose      | Used to display the Switch's current STP configuration.       |
| Syntax       | show stp  |
| Description  | This command displays the Switch's current STP configuration. |
| Parameters   | None.   |
| Restrictions | None.   |

## Example usage:

To display the status of STP on the Switch:

Status 1: STP enabled with STP compatible version

DGS3048#show stp Command: show stp STP Status : Enabled STP Version : STP Compatible Max Age : 20 Hello Time : 2 : 15 Forward Delay Max Hops : 20 Forwarding BPDU : Enabled DGS3048#

Status 2: STP enabled for RSTP

DGS3048#show stp
Command: show stp

STP Status : Enabled
STP Version : RSTP
Max Age : 20
Hello Time : 2
Forward Delay : 15
Max Hops : 20
Forwarding BPDU : Enabled

DGS3048#

Status 3: STP enabled for MSTP

DGS3048#show stp Command: show stp

STP Status : Enabled
STP Version : MSTP
Max Age : 20
Forward Delay : 15
Max Hops : 20
Forwarding BPDU : Enabled

DGS3048#

| show stp ports |   |
|----------------|---|
| Purpose        | Used to display the Switch's current instance_id configuration.   |
| Syntax         | show stp ports <portlist></portlist>  |
| Description    | This command displays the STP Instance Settings and STP Instance Operational Status currently implemented on the Switch.  |
| Parameters     | <portlist> – Specifies a range of ports to be viewed. The port list is specified by listing the lowest switch number and the beginning port number on that switch, separated by a colon. Then the highest switch number, and the highest port number of the range (also separated by a colon) are specified. The beginning and end of the port list range are separated by a dash. For example, 1:3 specifies switch number 1, port 3. 2:4 specifies switch number 2, port 4. 1:3-2:4 specifies all of the ports between switch 1, port 3 and switch 2, port 4 – in numerical order.</portlist> |
| Restrictions   | None.   |

## Example usage:

To show stp ports 1 through 9 on switch one:

 External PathCost: Auto/200000, Edge Port: No /No, P2P: Auto /Yes

# show stp instance\_id

Purpose Used to display the Switch's STP instance configuration

Syntax show stp instance\_id <value 0-15>

Description This command displays the Switch's current STP Instance

Settings and the STP Instance Operational Status.

Parameters < value 0-15> - Enter a value defining the previously configured

instance\_id on the Switch. An entry of 0 will display the STP

configuration for the CIST internally set on the Switch.

Restrictions None.

# Example usage:

To display the STP instance configuration for instance 0 (the internal CIST) on the Switch:

DGS3048#show stp instance 0

Command: show stp instance 0

#### STP Instance Settings

# FORWARDING DATABASE COMMANDS

The layer 2 forwarding database commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command               | Parameters  |
|-----------------------|---|
| create fdb            | <vlan_name 32=""> <macaddr> port <port></port></macaddr></vlan_name>  |
| create multicast_fdb  | <vlan_name 32=""> <macaddr></macaddr></vlan_name>   |
| config multicast_fdb  | <vlan_name 32=""><macaddr> [add   delete] <portlist></portlist></macaddr></vlan_name>                           |
| config fdb aging_time | <value 0-630=""></value>  |
| Show fdb aging_time   |   |
| clear fdb             | <all></all>   |
| show multicast_fdb    | {vlan <vlan_name 32="">   mac_address <macaddr>}</macaddr></vlan_name>  |
| show fdb              | {port <port>   vlan <vlan_name 32=""> mac_address <macaddr>   static   aging_time}</macaddr></vlan_name></port> |
| delete fdb            | <vlan_name 32=""> <macaddr></macaddr></vlan_name>   |

Each command is listed, in detail, in the following sections.

| create fdb   |  |
|--------------|--|
| Purpose      | Used to create a static entry to the unicast MAC address forwarding table (database)   |
| Syntax       | create fdb <vlan_name 32=""> <macaddr> port <port></port></macaddr></vlan_name>  |
| Description  | This command will make an entry into the Switch's unicast MAC address forwarding database.   |
| Parameters   | <vlan_name 32=""> – The name of the VLAN on which the MAC address resides.</vlan_name>   |
|              | <macaddr> – The MAC address that will be added to the forwarding table.</macaddr>  |
|              | <ul><li>port <port> – The port number corresponding to the MAC destination address. The Switch will always forward traffic to the specified device through this port.</port></li></ul> |
| Restrictions | Only administrator-level users can issue this command.   |

# Example usage:

To create a unicast MAC FDB entry:

DGS3048#create fdb default 00-00-00-01-02 port 2
Command: create fdb default 00-00-00-01-02 port 2
Success.
DGS3048#

| create multicast_fdb |   |
|----------------------|---|
| Purpose              | Used to create a static entry to the multicast MAC address forwarding table (database).           |
| Syntax               | create multicast_fdb <vlan_name 32=""> <macaddr></macaddr></vlan_name>                            |
| Description          | This command will make an entry into the Switch's multicast MAC address forwarding database.      |
| Parameters           | <pre><vlan_name 32=""> - The name of the VLAN on which the MAC address resides.</vlan_name></pre> |
|                      | <macaddr> – The MAC address that will be added to the forwarding table.</macaddr>                 |
| Restrictions         | Only administrator-level users can issue this command.  |

To create multicast MAC forwarding:

DGS3048#create multicast\_fdb default 01-00-5E-00-00-00 Command: create multicast\_fdb default 01-00-5E-00-00-00

Success.

DGS3048#

| config multicast_fdb |  |
|----------------------|--|
| Purpose              | Used to configure the Switch's multicast MAC address forwarding database.  |
| Syntax               | config multicast_fdb <vlan_name 32=""> <macaddr> [add   delete] <portlist></portlist></macaddr></vlan_name>                          |
| Description          | This command configures the multicast MAC address forwarding table.  |
| Parameters           | <pre><vlan_name 32=""> - The name of the VLAN on which the MAC address resides.</vlan_name></pre>                                    |
|                      | <macaddr> – The MAC address that will be added to the forwarding table.</macaddr>  |
|                      | [add   delete] – Add will add the MAC address to the forwarding table. Delete will remove the MAC address from the forwarding table. |
|                      | <pre><portlist> - Specifies a port or range of ports to be configured.</portlist></pre>  |
| Restrictions         | Only administrator-level users can issue this command.   |

# Example usage:

To add multicast MAC forwarding:

DGS3048#config multicast\_fdb default 01-00-5E-00-00-00 add 1 Command: config multicast\_fdb default 01-00-5E-00-00-00 add 1

Success.

DGS3048#

| config fdb aging_time |  |
|-----------------------|--|
| Purpose               | Used to set the aging time of the forwarding database.   |
| Syntax                | config fdb aging_time minutes <value 0-630=""></value>   |
| Description           | The aging time affects the learning process of the Switch. Dynamic forwarding table entries, which are made up of the source MAC addresses and their associated port numbers, are deleted from the table if they are not accessed within the aging time. The aging time can be from 0 to 630 minutes with a default value of 5 minutes. A very long aging time can result in dynamic forwarding table entries that are out-of-date or no longer exist. This may cause incorrect packet forwarding decisions by the Switch. If the aging time is too short however, many entries may be aged out too soon. This will result in a high percentage of received packets whose source addresses cannot be found in the forwarding table, in which case the Switch will broadcast the packet to all ports, negating many of the benefits of having a Switch. |

<int 0-630> - The aging time for the MAC address forwarding

Only administrator-level users can issue this command.

# Example usage:

Parameters

Restrictions

To set the fdb aging time:

DGS3048#config fdb aging\_time 300 Command: config fdb aging\_time 300

database value, in minutes.

Success.

DGS3048#

| delete fdb   |   |
|--------------|---|
| Purpose      | Used to delete an entry to the Switch's forwarding database.                                      |
| Syntax       | delete fdb <vlan_name 32=""> <macaddr></macaddr></vlan_name>                                      |
| Description  | This command is used to delete a previous entry to the Switch's MAC address forwarding database.  |
| Parameters   | <pre><vlan_name 32=""> - The name of the VLAN on which the MAC address resides.</vlan_name></pre> |
|              | <macaddr> – The MAC address that will be added to the forwarding table.</macaddr>                 |
| Restrictions | Only administrator-level users can issue this command.  |

Example usage:

To delete a permanent FDB entry:

DGS3048#delete fdb default 00-00-00-00-01-02 Command: delete fdb default 00-00-00-00-01-02

Success.

DGS3048#

| clear fdb    |  |
|--------------|--|
| Purpose      | Used to clear the Switch's forwarding database of all dynamically learned MAC addresses.       |
| Syntax       | clear fdb <all></all>  |
| Description  | This command is used to clear dynamically learned entries to the Switch's forwarding database. |
| Parameters   | all – Clears all dynamic entries to the Switch's forwarding database.                          |
| Restrictions | Only administrator-level users can issue this command.   |

# Example usage:

To clear all FDB dynamic entries:

DGS3048#clear fdb all Command: clear fdb all

Success.

DGS3048#

| show multicast_fdb |   |  |
|--------------------|---|--|
| Purpose            | Used to display the contents of the Switch's multicast forwarding database.                                     |  |
| Syntax             | show mulitcast_fdb [vlan <vlan_name 32="">   mac_address <macaddr></macaddr></vlan_name>                        |  |
| Description        | This command is used to display the current contents of the Switch's multicast MAC address forwarding database. |  |
| Parameters         | <pre>vlan <vlan_name 32=""> - The name of the VLAN on which the MAC address resides.</vlan_name></pre>          |  |
|                    | mac_address <macaddr> - The MAC address that will be added to the forwarding table.</macaddr>                   |  |
| Restrictions       | None.   |  |

# Example usage:

To display multicast MAC address table:

DGS3048#show multicast\_fdb Command: show multicast\_fdb

VLAN Name : default

# **DGS-3048 Layer 2 Switch CLI Reference Manual**

MAC Address : 01-00-5E-00-00

Egress Ports : 1-5,26 Mode : Static

Total Entries : 1

DGS3048#

| show fdb     |  |
|--------------|--|
| Purpose      | Used to display the current unicast MAC address forwarding database.   |
| Syntax       | show fdb {port <port>   vlan <vlan_name 32="">   mac_address <macaddr>   static   aging_time}</macaddr></vlan_name></port>   |
| Description  | This command will display the current contents of the Switch's forwarding database.  |
| Parameters   | <ul><li>port <port> – The port number corresponding to the MAC destination address. The Switch will always forward traffic to the specified device through this port.</port></li></ul> |
|              | <pre><vlan_name 32=""> - The name of the VLAN on which the MAC address resides.</vlan_name></pre>  |
|              | <macaddr> – The MAC address that will be added to the forwarding table.</macaddr>  |
|              | static – Displays the static MAC address entries.  |
|              | aging_time – Displays the aging time for the MAC address forwarding database.  |
| Restrictions | None.  |

# Example usage:

To display unicast MAC address table:

| DGS3048#show fdb |                                      |                   |      |         |
|------------------|--------------------------------------|-------------------|------|---------|
| Com              | Command: show fdb                    |                   |      |         |
|                  |                                      |                   |      |         |
| Unic             | Unicast MAC Address Aging Time = 300 |                   |      |         |
| VID              | <b>VLAN Name</b>                     | MAC Address       | Port | Туре    |
|                  |                                      |                   |      |         |
| 1                | default                              | 00-00-39-34-66-9A | 10   | Dynamic |

To display the aging time:

DGS3048#show fdb aging\_time
Command: show fdb aging\_time

Unicast MAC Address Aging Time = 5

DGS3048#

| Delete trusted_host |  |  |
|---------------------|--|--|
| Purpose             | Used to delete a trusted host entry made using the <b>create trusted_host</b> command above.                 |  |
| Syntax              | delete trusted _host <ipaddr></ipaddr>   |  |
| Description         | This command is used to delete a trusted host entry made using the <b>create trusted_host</b> command above. |  |
| Parameters          | <pre><ipaddr> - The IP address of the trusted host.</ipaddr></pre>   |  |
| Restrictions        | Only administrator-level users can issue this command.   |  |

# ExampleUsage:

To delete a trusted host with an IP address 10.48.74.121:

DGS3048#delete trusted\_host 10.48.74.121 Command: delete trusted\_host 10.48.74.121

Success.

11

# BROADCAST STORM CONTROL COMMANDS

The broadcast storm control commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command                | Parameters   |
|------------------------|--|
| config traffic control | {[ports [ <portlist>   all]] state [enable   disable]   [storm_type [broadcast   broadcast_multicast]]   threshold [int 3500-1000000]]}</portlist> |
| show traffic control   | {ports <portlist>}</portlist>  |

Each command is listed, in detail, in the following sections.

| config traffic | control  |
|----------------|--|
| Purpose        | Used to configure broadcast / multicast traffic control.   |
| Syntax         | config traffic control {[ports [ <portlist>   all]] state [enable   disable]   [storm_type [broadcast   broadcast_multicast]]   threshold [int 3500-1000000]]}</portlist>  |
| Description    | This command is used to configure broadcast storm control.   |
| Parameters     | ports <portlist> - Enter a port or range of ports to be configured.</portlist>   |
|                | all – Specifies all ports on the Switch will be configured.  |
|                | storm_type – Allows the user to enter a type of broadcast storm for<br>which to configure the traffic control. The user may choose one of<br>the following:  |
|                | <ul> <li>broadcast – Entering this parameter will enable broadcast<br/>storm control only.</li> </ul>  |
|                | <ul> <li>broadcast_multicast – Entering this parameter will enable<br/>broadcast and multicast storm control.</li> </ul>   |
|                | threshold [int 3500-1000000] – The upper threshold at which the specified traffic control is switched on. The value is the number of broadcast/multicast/dlf packets, in Kbps, received by the Switch that will trigger the storm traffic control measures. The value ranges in size from 3500 to 10000000 Kbps. |
| Restrictions   | Only administrator-level users can issue this command.   |

# Example usage:

To configure traffic control and enable broadcast storm control system wide:

DGS3048#config traffic control ports all state enable Command: config traffic control ports all state enable

Success.

DGS3048#config traffic control storm\_type broadcast threshold 15000 Command: config traffic control storm\_type broadcast threshold 15000

Success.

DGS3048#config traffic control threshold 15000 Command: config traffic control threshold 15000

Success.

DGS3048#

| show traffic control |  |  |
|----------------------|--|--|
| Purpose              | Used to display current traffic control settings.                                    |  |
| Syntax               | show traffic control {ports <portlist>}</portlist>                                   |  |
| Description          | This command displays the current storm traffic control configuration on the Switch. |  |
| Parameters           | ports <portlist> - Enter a port or range of ports to be viewed.</portlist>           |  |
| Restrictions         | None.  |  |

## Example usage:

To display traffic control setting for ports 1-5:

DGS3048#show traffic control Command: show traffic control

**Traffic Control** 

Storm Control Type: broadcast Threshold : 15000

| Port | State          |
|------|----------------|
|      |                |
| 1    | <b>Enabled</b> |
| 2    | <b>Enabled</b> |
| 3    | <b>Enabled</b> |
| 4    | <b>Enabled</b> |
| 5    | Enabled        |

**Total Entries: 5** 

# **QoS Commands**

The DGS-3048 switch supports 802.1p priority queuing. The Switch has 8 priority classes of service. These priority classes of service are numbered from 7 (Class 7) — the highest priority class of service — to 0 (Class 0) — the lowest priority class of service. The eight priority queues specified in IEEE 802.1p (p0 to p7) are mapped to the Switch's priority classes of service as follows:

- Priority 0 is assigned to the Switch's Q0 class.
- Priority 1 is assigned to the Switch's Q1 class.
- Priority 2 is assigned to the Switch's Q2 class.
- Priority 3 is assigned to the Switch's Q3 class.
- Priority 4 is assigned to the Switch's Q4 class.
- Priority 5 is assigned to the Switch's Q5 class.
- Priority 6 is assigned to the Switch's Q6 class.
- Priority 7 is assigned to the Switch's Q7 class.

Priority scheduling is implemented by using two types of methods, strict priority and round-robin priority. If no changes are made to the QoS priority scheduling settings the method used is strict priority.

For strict priority-based scheduling, packets residing in the higher priority classes of service are transmitted first. Only when these classes of service are empty, are packets of lower classes of service allowed to be transmitted. Higher priority packets always receive preference regardless of the amount of lower priority packets in the buffer and regardless of the time elapsed since any lower priority packets have been transmitted. By default, the Switch is configured to empty the buffer using strict priority.

**NOTICE:** The default QoS scheduling arrangement is a strict priority schedule. To customize scheduling to set up round-robin queue clearing, the MAX. Latency and MAX. Packets values need to be changed using the config scheduling command. See **config scheduling** below.

To use implement round-robin (weighted) priority, the Switch's eight priority classes of service can be configured to reduce the buffer in a round-robin fashion - beginning with the highest priority class of service, and proceeding to the lowest priority class of service before returning to the highest priority classes of service.

The weighted-priority based scheduling alleviates the main disadvantage of strict priority-based scheduling – in that lower priority class of service get starved of bandwidth – by providing a minimum bandwidth to all classes of service for transmission. This is accomplished by configuring the maximum number of packets allowed to be transmitted from a given priority class of service and the maximum amount of time a given priority class of service will have to wait before being allowed to transmit its accumulated packets. This establishes a Class of Service (CoS) for each of the Switch's eight hardware priority classes of service.

The possible range for maximum packets is: 0 to 15 packets.

The QoS commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command                        | Parameters   |
|--------------------------------|--|
| config scheduling              | <class_id 0-7=""> max_packet <value 0-15=""></value></class_id>      |
| show scheduling                |  |
| config 802.1p user_priority    | <pre><priority 0-7=""> <class_id 0-7=""></class_id></priority></pre> |
| show 802.1p user_priority      |  |
| config 802.1p default_priority | [ <portlist>   all] <priority 0-7=""></priority></portlist>          |

| Command                      | Parameters  |
|------------------------------|---|
| show 802.1p default_priority | { <portlist>}</portlist>                                    |
| config scheduling_mechanism  | [strict   round_robin]                                      |
| show scheduling_mechanism    |   |
| config rate_limit            | [ <portlist>   all] <value 1-1000000=""></value></portlist> |
| show rate_limit              |   |

Each command is listed, in detail, in the following sections.

| config scheduling |   |  |
|-------------------|---|--|
| Purpose           | Used to configure traffic scheduling for each of the Switch's QoS queues.   |  |
| Syntax            | Config scheduling <class_id 0-7=""> {max_packet <value 0-15}<="" td=""></value></class_id>  |  |
| Description       | The Switch contains eight hardware priority classes of service per device. The Switch's default settings draw down the eight hardware classes of service in order, from the highest class (Class 7) to the lowest class (Class 0). Starting with the highest priority class of service (Class 7), the highest priority class of service will transmit all of the packets and empty its buffer before allowing the next lower priority class of service to transmit its packets. The next highest priority class of service will empty before proceeding to the next class of service and so on. Lower priority classes of service are allowed to transmit only if the higher priority classes of service in the buffer are completely emptied. Packets in the higher priority classes of service are always emptied before any in the lower priority classes of service regardless of latency or volume of the lower priority classes of service. |  |
|                   | The default settings for QoS scheduling employ this strict priority scheme to empty priority classes of service.  |  |
|                   | The <b>config scheduling</b> command can be used to specify the round robin rotation by which these eight hardware priority classes of service are reduced. To use a round-robin scheme, the <b>max_packet</b> parameter must be changed from the default value of 0.   |  |
|                   | The max_packet parameter allows you to specify the maximum number of packets a given priority classes of service can transmit before allowing the next lowest priority queue to begin transmitting its packets. A value between 0 and 15 packets can be specified. For example, if a value of 5 is specified, then the highest priority class of service (queue 7) will be allowed to transmit 5 packets. Then the next lower priority class of service (queue 6) will be allowed to transmit 5 packets, and so on, until all of the classes of service have transmitted 5 packets. The process will then repeat.   |  |
| Parameters        | <class_id> – Specifies which of the eight priority classes of service to which the <b>config scheduling</b> command will be applied. The eight priority classes of service are identified by number – from 0 to 7 – with class 7 being the highest priority.</class_id>   |  |

max\_packet <value 0-15> — Specifies the maximum number of packets the above specified priority class of service will be allowed to transmit before allowing the next lowest priority classes of service to transmit its packets. A value between 0 and 15 packets can be

with class 7 being the highest priority.

# config scheduling

specified. The default value is 0.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To configure traffic scheduling:

DGS30484# config scheduling 7 max\_packet 15 Command: config scheduling 7 max\_packet 15

Success.

DGS30484#

# show scheduling

Purpose Used to display the currently configured traffic scheduling on the

Switch.

**Syntax** show scheduling

Description The **show scheduling** command displays the current configuration

for the maximum number of packets (max\_packet) value assigned to the eight priority classes of service on the Switch. The Switch will empty the eight hardware classes of service in order, from the

highest priority (class 7) to the lowest priority (class 0).

**Parameters** None. None. Restrictions

## Example usage:

To display the current scheduling configuration:

| DGS3048# show scheduling |
|--------------------------|
| QOS Output Scheduling    |

# MAX. Packet 1

Class-0

Class-1 2

Class-2 3

Class-3 4

Class-4 5

Class-5 6

7 Class-6

Class-7

| config 802.1p | user_priorit   | zy .  |
|---------------|--|---|
| Purpose       |  | 802.1p user priority of an incoming packet to one of re classes of service available on the Switch.   |
| Syntax        | config 802.1p us   | ser_priority <priority 0-7=""> <class_id 0-7=""></class_id></priority>  |
| Description   | way the Switch w<br>user priority tag, t<br>service available<br>incoming 802.1p | p user_priority command is used to configure the rill map an incoming packet, based on its 802.1p to one of the eight hardware priority classes of on the Switch. The Switch's default is to map the priority values to the eight hardware classes of to the following chart: |
|               | 802.1p Value 5   | Switch Priority Queue   |
|               | 0<br>1<br>2<br>3<br>4<br>5<br>6<br>7   | 0<br>1<br>2<br>3<br>4<br>5<br>6<br>7  |
| Parameters    |  | specifies which of the eight 802.1p priority values (0 to one of the Switch's hardware priority classes of d>, 0 through 7).  |
|               |  | Specifies which of the Switch's hardware priority e the 802.1p priority value (specified above) will be   |
| Restrictions  | Only administrate  | or-level users can issue this command.  |

To configure 802.1 user priority on the Switch:

DGS3048# config 802.1p user\_priority 1 3
Command: config 802.1p user\_priority 1 3
Success.

DGS3048#

| show 802.1p user_priority |  |  |
|---------------------------|--|--|
| Purpose                   | Used to display the current mapping between an incoming packet's 802.1p priority value and one of the Switch's eight hardware priority classes of service.                                 |  |
| Syntax                    | show 802.1p user_priority  |  |
| Description               | The <b>show 802.1p user_priority</b> command displays the current mapping of an incoming packet's 802.1p priority value to one of the Switch's eight hardware priority classes of service. |  |
| Parameters                | None.  |  |
| Restrictions              | None.  |  |

# Example usage:

To show 802.1p user priority:

```
DGS3048# show 802.1p user_priority

Command: show 802.1p user_priority

QOS Class of Traffic

Priority-0 -> <Class-0>
Priority-1 -> <Class-1>
Priority-2 -> <Class-2>
Priority-3 -> <Class-3>
Priority-4 -> <Class-4>
Priority-5 -> <Class-5>
Priority-7 -> <Class-6>
Priority-7 -> <Class-7>
```

| config 802.1p default_priority |  |  |
|--------------------------------|--|--|
| Purpose                        | Used to assign an 802.1p priority tag to an incoming untagged packet that has no 802.1p priority tag.  |  |
| Syntax                         | config 802.1p default_priority [ <portlist>   all] <priority 0-7=""></priority></portlist>   |  |
| Description                    | The <b>config 802.1p default_priority</b> command allows you to specify the 802.1p priority value an untagged, incoming packet will be assigned before being forwarded to its destination. |  |

| config 802.1p default_priority |   |  |
|--------------------------------|---|--|
| Parameters                     | <portlist> - Specifies a port or range of ports to be configured.</portlist>  |  |
|                                | <ul><li>all – Specifies that the config 802.1p default_priority command<br/>will be applied to all ports on the Switch.</li></ul> |  |
|                                | <pri><pri><pri><pri><pri><pri><pri><p< td=""></p<></pri></pri></pri></pri></pri></pri></pri>                                      |  |
| Restrictions                   | Only administrator-level users can issue this command.  |  |

To configure 802.1p default priority on the Switch:

DGS3048#config 802.1p default\_priority all 5
Command: config 802.1p default\_priority all 5
Success.
DGS3048#

| show 802.1 default_priority |  |  |
|-----------------------------|--|--|
| Purpose                     | Used to display the currently configured 802.1p priority value that will be assigned to an incoming, untagged packet before being forwarded to its destination.  |  |
| Syntax                      | show 802.1p default_priority { <portlist>}</portlist>  |  |
| Description                 | The <b>show 802.1p default_priority</b> command displays the currently configured 802.1p priority value that will be assigned to an incoming, untagged packet before being forwarded to its destination. |  |
| Parameters                  | <portlist> – Specifies a port or range of ports to be viewed.</portlist>   |  |
| Restrictions                | None.  |  |

To display the current 802.1p default priority configuration on the Switch:

# config scheduling\_mechanism

Purpose Used to configure the scheduling mechanism for the QoS function

Syntax config scheduling mechanism [strict | round\_robin]

Description The **config scheduling\_mechanism** command allows the user to

select between a **round robin (WRR)** and a **Strict** mechanism for emptying the priority classes of service of the QoS function. The Switch contains seven hardware priority classes of service. Incoming packets must be mapped to one of these seven hardware priority classes of service. This command is used to specify the rotation by which these seven hardware priority classes

of service are emptied.

The Switch's default is to empty the eight priority classes of service in order – from the highest priority class of service (queue 7) to the lowest priority class of service (queue 0). Each queue will transmit all of the packets in its buffer before allowing the next lower priority class of service to transmit its packets. Lower classes of service will be pre-empted from emptying its queue if a packet is received on a higher class of service. The packet that was received on the higher class of service will transmit its packet before allowing the

lower class to resume clearing its queue.

Parameters strict – Entering the **strict** parameter indicates that the highest

class of service is the first to be processed. That is, the highest class of service should finish emptying before the others begin.

weight\_fair – Entering the weight fair parameter indicates that the priority classes of service will empty packets in a weighted roundrobin (*WRR*) order. That is to say that they will be emptied in an

even distribution.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To configure the traffic scheduling mechanism for each COS queue:

DGS3048#config scheduling\_mechanism strict Command: config scheduling mechanism strict

Success.

DGS3048#

# show scheduling\_mechanism

Purpose Used to display the current traffic scheduling mechanisms in use

on the Switch.

Syntax show scheduling mechanism

Description This command will display the current traffic scheduling

mechanisms in use on the Switch.

Parameters None.
Restrictions None.

Example Usage:

To show the scheduling mechanism:

DGS3048#show scheduling\_mechanism Command: show scheduling\_mechanism QOS scheduling\_mechanism CLASS ID Mechanism Class-0 strict Class-1 strict Class-2 strict Class-3 strict Class-4 strict Class-5 strict Class-6 strict Class-7 strict DGS3048#

| config rate_limit |  |  |
|-------------------|--|--|
| Purpose           | To enable rate limitation of specific egress port                            |  |
| Syntax            | config rate_limit[ <portlist>   all] <value 1-1000000=""></value></portlist> |  |
| Description       | The command enables setting of rate limitation of egress port                |  |
| Parameters        | <portlist> – Specifies a port or range of ports to be set</portlist>         |  |
|                   | <value 3500-1000000=""> Specifies the rate limit range.</value>              |  |
| Restrictions      | None   |  |

## Example Usage:

To configure a rate limit of an egress port:

DGS3048# config rate\_limit all (+value)

Command: config rate\_limit all

<3500-1000000> rate

DGS3048#

| show rate_limit |  |
|-----------------|--|
| Purpose         | To show the rate limit of specific egress ports.                           |
| Syntax          | show rate_limit[ <portlist>   all] <value 1-1000000=""></value></portlist> |
| Description     | This command will display the rate limit of an egress port                 |
| Parameters      | <pre><portlist> - Specifies a port or range of ports.</portlist></pre>     |
|                 | <value 1-1000000=""> - Specifies the rate limit range.</value>             |
| Restrictions    | None   |

Example Usage:

To show a port's rate limit:

| DG | S3048# show rate_limit all                               |
|----|--|

# PORT MIRRORING COMMANDS

The port mirroring commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command        | Parameters  |
|----------------|---|
| config mirror  | {target <port>   ingress_source <port>   egress_source <port>}</port></port></port> |
| disable mirror |   |
| show mirror    |   |

Each command is listed, in detail, in the following sections.

| config mirror |  |
|---------------|--|
| Purpose       | Used to configure a mirror port – source port pair on the Switch.  |
| Syntax        | <pre>config mirror {target <port>   ingress_source <port>   egress_source <port>}</port></port></port></pre>   |
| Description   | This command allows a range of ports to have all of their traffic also sent to a designated port, where a network sniffer or other device can monitor the network traffic. In addition, you can specify that only traffic received by or sent by one or both is mirrored to the Target port. |
| Parameters    | target port <port> – This specifies the port that mirrors traffic forwarding.</port>   |
|               | ingress_target – This parameter denotes that the user wishes to mirror<br>traffic entering the port specified in the source port parameter.  |
|               | <ul> <li>port <port> - Specifies the target port to where ingress traffic will be<br/>mirrored. This port cannot be the same as the source port and also<br/>cannot have a slower transfer speed as the source port.</port></li> </ul>   |
|               | egress_port - This parameter denotes that the user wishes to mirror traffic leaving the port specified in the source port parameter.   |
|               | port <port> - Specifies the target port to where egress traffic will be<br/>mirrored. This port cannot be the same as the source port and also<br/>cannot have a slower transfer speed as the source port.</port>  |
| Restrictions  | Any target port cannot be listed as a source port. Only administrator-level users can issue this command.  |

# Example usage:

To add the mirroring ports:

| DGS3048# config mirror source port 1 ingress_target port 2 egress_target port 3  Command: config mirror source port 1 ingress_target port 2 egress_target port 3 |
|--|
| Success.   |
| DGS3048#   |

disable mirror

Purpose Used to disable port mirroring and to remove a previously entered port

mirroring configuration.

Syntax disable mirror

Description This command, combined with **the config mirror** command above, allows

you to enter a port mirroring configuration into the Switch, and then turn the

port mirroring on and off without having to modify the port mirroring

configuration.

Parameters None.

Restrictions Only administrator-level users can issue this command.

## Example usage:

To disable mirroring configurations:

DGS3048#disable mirror

Command: disable mirror

Success.

DGS3048#

show mirror

Purpose Used to show the current port mirroring configuration on the Switch.

Syntax show mirror

Description This command displays the current port mirroring configuration on the

Switch.

Parameters None. Restrictions None.

#### Example usage:

To display mirroring configuration:

DGS3048#show mirror

Command: show mirror

**Current Settings** 

Mirror Status : Enabled

Target Port for Ingress : 2
Target Port for Egress : 3
Target Port : 1

14

# VLAN COMMANDS

The VLAN commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command  | Parameters  |  |  |
|--|---|--|--|
| create vlan <pre><vlan_name 32=""> {tag <vlanid 1-4094="">}</vlanid></vlan_name></pre> |   |  |  |
| delete vlan  | <vlan_name 32=""></vlan_name>   |  |  |
| config vlan  | <pre><vlan_name 32=""> {[add [tagged   untagged   forbidden]   delete] <portlist>   ch1   ch2   ch3   ch4   ch5   ch6   ch7   ch8  }</portlist></vlan_name></pre>   |  |  |
| config gvrp  | [ <portlist>   ch1   ch2   ch3   ch4   ch5   ch6   ch7   ch8   all] {state [enable   disable]   ingress_checking [enable   disable] acceptable_frame [tagged_only   admit_all]   pvid <vlanid 1-4094="">}</vlanid></portlist> |  |  |
| enable gvrp  |   |  |  |
| disable gvrp   |   |  |  |
| show vlan { <vlan_name 32="">}</vlan_name>   |   |  |  |
| show gvrp  | { <portlist>   ch1   ch2   ch3   ch4   ch5   ch6   ch7   ch8 ]}</portlist>  |  |  |

Each command is listed, in detail, in the following sections.

| create vlan  |   |
|--------------|---|
| Purpose      | Used to create a VLAN on the Switch.  |
| Syntax       | create vlan <vlan_name 32=""> {tag <vlanid 1-4094="">}</vlanid></vlan_name>   |
| Description  | This command allows you to create a VLAN on the Switch.   |
| Parameters   | <vlan_name 32=""> – The name of the VLAN to be created.</vlan_name>   |
|              | tag <vlanid 1-4094=""> – The VLAN ID of the VLAN to be created.<br/>Allowed values = 1-4094</vlanid>  |
| Restrictions | Each VLAN name can be up to 32 characters. If the VLAN is not given a tag, it will be a port-based VLAN. Only administrator-level users can issue this command. |

# Example usage:

To create a VLAN v1, tag 2:

DGS3048#create vlan v1 tag 2
Command: create vlan v1 tag 2
Success.
DGS3048#

| delete  | vlan   |  |
|---------|--|--|
| Purpose | Used to delete a previously configured VLAN on the Switch. |  |

# DGS-3048 Layer 2 Switch CLI Reference Manual

| Syntax       | delete vlan <vlan_name 32=""></vlan_name>                                       |  |  |  |
|--------------|---|--|--|--|
| Description  | This command will delete a previously configured VLAN on the Switch.            |  |  |  |
| Parameters   | <pre><vlan_name 32=""> - The VLAN name of the VLAN to delete.</vlan_name></pre> |  |  |  |
| Restrictions | Only administrator-level users can issue this command.                          |  |  |  |

# Example usage:

To remove a vlan v1:

| DGS3048#delete vlan v1  |  |
|-------------------------|--|
| Command: delete vlan v1 |  |
| Success.                |  |
| DGS3048#                |  |

| config vlan  |   |
|--------------|---|
| Purpose      | Used to add additional ports to a previously configured VLAN.   |
| Syntax       | config vlan <vlan_name 32=""> [add [tagged   untagged   forbidden]   delete] <portlist>  ch1   ch2   ch3   ch4   ch5   ch6   ch7   ch8 ]</portlist></vlan_name>   |
| Description  | This command allows the user to add or delete ports to the port list of a previously configured VLAN. You can specify the additional ports as tagging, untagging, or forbidden. The default is to assign the ports as untagged. |
| Parameters   | <pre><vlan_name 32=""> - The name of the VLAN to which to add ports.</vlan_name></pre>  |
|              | add – Specifies to add ports to a previously created vlan.  |
|              | delete - Specifies to delete ports to a previously created vlan.  |
|              | tagged – Specifies the additional ports as tagged.  |
|              | untagged – Specifies the additional ports as untagged.  |
|              | forbidden – Specifies the additional ports as forbidden.  |
|              | <pre><portlist> - A port or range of ports to be added to or deleted from the VLAN.</portlist></pre>  |
|              | <ch1-8> – assigns ports to a port-channel.</ch1-8>  |
| Restrictions | Only administrator-level users can issue this command.  |

# Example usage:

To add ports 4 through 8 as tagged ports to the VLAN v1:

| DGS3048#config vlan v1 add tagged 4-8 Command: config vlan v1 add tagged 4-8 |  |
|--|--|
| Success.   |  |

DGS3048#

| config gvrp  |   |
|--------------|---|
| Purpose      | Used to configure GVRP on the Switch.   |
| Syntax       | config gvrp [ <portlist>   ch1   ch2   ch3   ch4   ch5   ch6   ch7   ch8   all] {state [enable   disable]   ingress_checking [enable   disable]   acceptable_frame [tagged_only   admit_all]   pvid <vlanid 1-4094="">}</vlanid></portlist> |
| Description  | This command is used to configure the Group VLAN Registration Protocol on the Switch. The user can configure ingress checking, the sending and receiving of GVRP information, and the Port VLAN ID (PVID).                                  |
| Parameters   | <pre><portlist> - A range of ports for which to configure GVRP.</portlist></pre>  |
|              | ch 1-8 – assigns ports to a port-channel.   |
|              | all - Specifies all ports on the Switch.  |
|              | state [enable   disable] – Enables or disables GVRP for the ports specified in the port list.   |
|              | ingress_checking [enable   disable] – Enables or disables ingress checking for the specified port list.   |
|              | acceptable_frame – This allows a definition of the type of frame accepted. Acceptable frames can be limited to tagged frames only (tagged_only) or can accept tagged and untagged (admit_all).  |
|              | pvid <vlanid 1-4094=""> - Specifies the default VLAN associated with the port, by VLAN ID.</vlanid>   |
| Restrictions | Only administrator-level users can issue this command.  |

## Example usage:

To set the ingress checking status, the sending and receiving GVRP information:

DGS3048#config gvrp 1-4 state enable ingress\_checking enable acceptable\_frame tagged\_only pvid 2

Command: config gvrp 1-4 state enable ingress\_checking enable acceptable\_frame tagged\_only pvid 2

Success.

| ena | b | 6 | 6 | V | r | n |
|-----|---|---|---|---|---|---|
|     | 3 | • | v | _ | - | Ľ |

Purpose Used to enable GVRP on the Switch.

Syntax enable gvrp

Description This command, along with **disable gvrp** below, is used to enable

and disable GVRP on the Switch, without changing the GVRP

configuration on the Switch.

Parameters None.

Restrictions Only administrator-level users can issue this command.

## Example usage:

To enable the generic VLAN Registration Protocol (GVRP):

DGS3048#enable gvrp Command: enable gvrp

Success.

DGS3048#

# disable gvrp

Purpose Used to disable GVRP on the Switch.

Syntax disable gvrp

Description This command, along with **enable gvrp** above, is used to enable

and disable GVRP on the Switch, without changing the GVRP

configuration on the Switch.

Parameters None.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To disable the Generic VLAN Registration Protocol (GVRP):

DGS3048#disable gvrp

Command: disable gvrp

Success.

DGS3048#

# show vlan

Purpose Used to display the current VLAN configuration on the Switch

Syntax show vlan {<vlan\_name 32>}

Description This command displays summary information about each VLAN

including the VLAN ID, VLAN name, the Tagging/Untagging status, and the Member/Non-member/Forbidden status of each port that is a

| show vlan    |  |
|--------------|--|
|              | member of the VLAN.  |
| Parameters   | <pre><vlan_name 32=""> - The VLAN name of the VLAN for which to display a summary of settings.</vlan_name></pre> |
| Restrictions | None.  |

To display the Switch's current VLAN settings:

| show gvrp    |  |
|--------------|--|
| Purpose      | Used to display the GVRP status for a port list on the Switch.   |
| Syntax       | show gvrp { <portlist>}   ch1   ch2   ch3   ch4   ch5   ch6   ch7   ch8 ]}</portlist>                    |
| Description  | This command displays the GVRP status for a port list on the Switch                                      |
| Parameters   | <portlist> – Specifies a port or range of ports for which the GVRP status is to be displayed.</portlist> |
|              | <ch1-8> – assigns ports to a port-channel.</ch1-8>   |
| Restrictions | None.  |

# Example usage:

To display GVRP port status:

| DGS3048#show gvrp 1-5<br>Command: show gvrp 1-5 |                   |          |                  |                       |  |  |  |

# LINK AGGREGATION COMMANDS

The link aggregation commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command                 | Parameters  |
|-------------------------|---|
| create link_aggregation | group_id <value 1-8=""></value>   |
| delete link_aggregation | group_id <value 1-8=""></value>   |
| config link_aggregation | group_id <value 1-8=""> { ports <portlist>   state [enable   disable]}</portlist></value> |
| show link_aggregation   | {group_id <value 1-8="">}</value>   |

Each command is listed, in detail, in the following sections.

| create link_aggregation |   |  |  |
|-------------------------|---|--|--|
| Purpose                 | Used to create a link aggregation group on the Switch.  |  |  |
| Syntax                  | create link_aggregation group_id <value 1-8=""></value>   |  |  |
| Description             | This command will create a link aggregation group with a unique identifier.   |  |  |
| Parameters              | group_id <value 1-8=""> – Specifies the group ID. The Switch allows up to 8 link aggregation groups to be configured. The group number identifies each of the groups.</value> |  |  |
| Restrictions            | Only administrator-level users can issue this command.  |  |  |

## Example usage:

To create a link aggregation group:

DGS3048#create link\_aggregation group\_id 1
Command: create link\_aggregation group\_id 1
Success.
DGS3048#

| delete link_aggregation |   |  |
|-------------------------|---|--|
| Purpose                 | Used to delete a previously configured link aggregation group.  |  |
| Syntax                  | delete link_aggregation group_id <value 1-8=""></value>   |  |
| Description             | This command is used to delete a previously configured link aggregation group.  |  |
| Parameters              | group_id <value 1-8=""> – Specifies the group ID. The Switch allows up to 8 link aggregation groups to be configured. The group number identifies each of the groups.</value> |  |

# delete link\_aggregation

Restrictions Only administrator-level users can issue this command.

## Example usage:

To delete link aggregation group:

DGS3048#delete link\_aggregation group\_id 1
Command: delete link\_aggregation group\_id 1

Success.

DGS3048#

| config link_aggregation |  |  |
|-------------------------|--|--|
| Purpose                 | Used to configure a previously created link aggregation group.   |  |
| Syntax                  | config link_aggregation group_id <value 1-8=""> { ports <portlist>   state [enable   disable]}</portlist></value>  |  |
| Description             | This command allows you to configure a link aggregation group that was created with the create link_aggregation command above.   |  |
| Parameters              | group_id <value 1-8=""> – Specifies the group ID. The Switch allows up to 8 link aggregation groups to be configured. The group number identifies each of the groups.</value>  |  |
|                         | <ul> <li>ports <portlist> – Specifies a port or range of ports that will belong to the link aggregation group. Ports may be listed in only one port aggregation group, that is, link aggregation groups may not overlap.</portlist></li> </ul> |  |
|                         | state [enable   disable] – Allows the user to enable or disable the specified link aggregation group.  |  |
| Restrictions            | Only administrator-level users can issue this command. Link aggregation groups may not overlap and must be contained on a single switch.   |  |

#### Example usage:

To define a load-sharing group of ports, group-id 1,master port 5 of module 1 with group members ports 5-7 plus port 9:

DGS3048#config link\_aggregation group\_id 1 master\_port 5 ports 5-7,9 Command: config link\_aggregation group\_id 1 master\_port 5 ports 5-7,9

Success.

#### DGS-3048 Layer 2 Switch CLI Reference Manual

# show link\_aggregation

Purpose Used to display the current link aggregation configuration on the Switch.

Syntax show link\_aggregation {group\_id <value 1 - 8> }

Description This command will display the current link aggregation configuration of the

Switch.

Parameters group\_id <value 1- 8> - Specifies the group ID. The Switch allows up to 8

link aggregation groups to be configured. The group number identifies each

of the groups.

Restrictions None.

#### Example usage:

To display Link Aggregation configuration:

DGS3048#show link\_aggregation Command: show link\_aggregation

Group ID : 1 Member Port : 5-7,9 Active Port :

Status : Disabled

# BASIC IP COMMANDS

The IP interface commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command     | Parameters   |
|-------------|--|
| config ipif | [{ipaddress <network_address>   vlan <vlan_name 32="">   state [enable   disable]}   dhcp]</vlan_name></network_address> |
| show ipif   | { <ipif_name 12="">}</ipif_name>   |

Each command is listed, in detail, in the following sections.

| config ipif Sy | rstem   |
|----------------|---|
| Purpose        | Used to configure the System IP interface.  |
| Syntax         | config ipif System [{ipaddress <network_address>   vlan <vlan_name<br>32&gt;   state [enable   disable]}   dhcp]</vlan_name<br></network_address>   |
| Description    | This command is used to configure the System IP interface on the Switch.  |
| Parameters     | System - The IP interface name to be configured. The default IP Interface name on the Switch is "System". All IP interface configurations done will be executed through this interface name.  |
|                | <network_address> – IP address and netmask of the IP interface to be created. The address and mask information may be specified by using the traditional format (for example, 10.1.2.3/255.0.0.0 or in CIDR format, 10.1.2.3/16).</network_address> |
|                | <vlan_name 32=""> – The name of the VLAN corresponding to the System IP interface.</vlan_name>  |
|                | state [enable   disable] - Used to enable or disable the IP interface.  |
|                | <ul><li>dhcp – Allows the selection of the DHCP protocol for the assignment of an IP address to the Switch's System IP interface.</li></ul>   |
| Restrictions   | Only administrator-level users can issue this command.  |

### Example usage:

To configure the IP interface System:

| DGS3048#config ipif System ipaddress 10.48.74.122/8  |  |
|--|--|
| Command: config ipif System ipaddress 10.48.74.122/8 |  |
| Success.   |  |
| DGS3048#   |  |

### DGS-3048 Layer 2 Switch CLI Reference Manual

| show ipif    |  |  |
|--------------|--|--|
| Purpose      | Used to display the configuration of an IP interface on the Switch.  |  |
| Syntax       | show ipif {system}   |  |
| Description  | This command will display the configuration of an IP interface on the Switch.                              |  |
| Parameters   | <system> - Enter the name of the IP interface for which to view the settings.<br/>(Always System)</system> |  |
| Restrictions | None.  |  |

### Example usage:

To display IP interface settings.

DGS3048#show ipif System Command: show ipif System

**IP Interface Settings** 

Interface Name: System

IP Address : 10.48.74.122 (MANUAL) Subnet Mask : 255.0.0.0

Subnet Mask : 255.0.0.0
VLAN Name : default
Admin. State : Disabled
Link Status : Link UP
Member Ports : 1-24

# IGMP SNOOPING COMMANDS

The IGMP Snooping commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command                       | Parameters   |  |
|-------------------------------|--|--|
| config igmp_snooping          | [ <vlan_name 32="">   all] {host_timeout <sec 1-16711450="">  <br/>router_timeout <sec 1-16711450="">   leave_timer <sec 0-<br="">16711450&gt;   state [enable   disable]}</sec></sec></sec></vlan_name> |  |
| config router_ports           | <vlan_name 32=""> [add   delete] <portlist></portlist></vlan_name>   |  |
| enable igmp snooping          |  |  |
| show igmp snooping            | {vlan <vlan_name 32="">}</vlan_name>   |  |
| show igmp snooping group      | {vlan <vlan_name 32="">}</vlan_name>   |  |
| show igmp_snooping forwarding | {vlan <vlan_name 32="">}</vlan_name>   |  |
| show router_ports             | {vlan <vlan_name 32="">} {static   dynamic}</vlan_name>  |  |

Each command is listed, in detail, in the following sections.

| config igmp_snooping |  |  |
|----------------------|--|--|
| Purpose              | Used to configure IGMP snooping on the Switch.   |  |
| Syntax               | config igmp_snooping [ <vlan_name 32="">   all] {host_timeout <sec 1-16711450="">   router_timeout <sec 1-16711450="">   leave_timer <sec 0-16711450="">   state [enable   disable]}</sec></sec></sec></vlan_name> |  |
| Description          | This command allows the user to configure IGMP snooping on the Switch.   |  |
| Parameters           | <vlan_name 32=""> – The name of the VLAN for which IGMP snooping is to be configured.</vlan_name>  |  |
|                      | all – Selecting this parameter will configure IGMP for all VLANs on the Switch.  |  |
|                      | host_timeout <sec 1-16711450=""> – Specifies the maximum amount of time a host can be a member of a multicast group without the Switch receiving a host membership report. The default is 300 seconds.</sec>       |  |
|                      | router_timeout <sec 0-16711450=""> — Specifies the maximum amount of time a route can be a member of a multicast group without the Switch receiving a host membership report. The default is 300 seconds.</sec>    |  |
|                      | leave_timer <sec 0-16711450=""> - Leave timer. The default is 2 seconds.</sec>   |  |
|                      | state [enable   disable] – Allows the user to enable or disable IGMP snooping for the specified VLAN.  |  |
| Restrictions         | Only administrator-level users can issue this command.   |  |

Example usage:

To configure the igmp snooping:

DGS3048#config igmp\_snooping default host\_timeout 250 state enable Command: config igmp\_snooping default host\_timeout 250 state enable

Success.

DGS3048#

| config router_ports |   |  |
|---------------------|---|--|
| Purpose             | Used to configure ports as router ports.  |  |
| Syntax              | config router_ports <vlan_name 32=""> [add   delete] <portlist></portlist></vlan_name>  |  |
| Description         | This command allows you to designate a range of ports as being connected to multicast-enabled routers. This will ensure that all packets with such a router as its destination will reach the multicast-enabled router – regardless of protocol, etc. |  |
| Parameters          | <vlan_name 32=""> - The name of the VLAN on which the router port resides.</vlan_name>  |  |
|                     | [add   delete] – Specify whether to add or delete ports defined in the following parameter <pre>cportlist</pre> , to the router port function.  |  |
|                     | <portlist> – Specifies a port or range of ports that will be configured as router ports.</portlist>   |  |
| Restrictions        | Only administrator-level users can issue this command.  |  |

#### Example usage:

To set up static router ports:

DGS3048#config router\_port default add 1-10 Command: config router\_port default add 1-10

Success.

DGS3048#

# enable igmp\_snooping

Purpose Used to enable IGMP snooping on the Switch.

Syntax enable igmp\_snooping

Description This command allows you to enable IGMP snooping on the Switch.

Parameters None

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To enable IGMP snooping on the Switch:

#### DGS-3048 Layer 2 Switch CLI Reference Manual

DGS3048#enable igmp\_snooping Command: enable igmp\_snooping

Success.

DGS3048#

# disable igmp\_snooping

Purpose Used to disable IGMP snooping on the Switch.

Syntax disable igmp\_snooping

Description This command disables IGMP snooping on the Switch. IGMP snooping can

be disabled only if IP multicast routing is not being used. Disabling IGMP snooping allows all IGMP and IP multicast traffic to flood within a given IP

interface.

Parameters None.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To disable IGMP snooping on the Switch:

DGS3048#disable igmp\_snooping Command: disable igmp\_snooping

Success.

## show igmp\_snooping

Purpose Used to show the current status of IGMP snooping on the Switch.

Syntax show igmp\_snooping {vlan <vlan\_name 32>}

Description This command will display the current IGMP snooping configuration on the

Switch.

Parameters < vlan name 32> - The name of the VLAN for which to view the IGMP

snooping configuration.

Restrictions None.

#### Example usage:

To show igmp snooping:

DGS3048#show igmp\_snooping Command: show igmp\_snooping

IGMP Snooping Global State : Disabled MulticastFiltering : Disabled

VLAN Name : default

Host Timeout : 260
Route Timeout : 260
Leaver Timer : 2
State : Disabled

Total Entries: 1

DGS3048#

# show igmp\_snooping group

Purpose Used to display the current IGMP snooping group configuration on the

Switch.

Syntax show igmp\_snooping group {vlan <vlan\_name 32>}

Description This command will display the current IGMP snooping group configuration

on the Switch.

Parameters </

group configuration information.

Restrictions None.

#### Example usage:

To show igmp snooping group:

DGS3048#show igmp\_snooping group Command: show igmp\_snooping group

VLAN Name : default

Multicast group: 224.0.0.2

MAC address : 01-00-5E-00-00-02

Reports : 1 Port Member : 3,4

Total Entries : 1

DGS3048#

# show igmp\_snooping forwarding

Purpose Used to display the IGMP snooping forwarding table entries on the Switch.

Syntax show igmp\_snooping forwarding {vlan <vlan\_name 32>}

Description This command will display the current IGMP snooping forwarding table

entries currently configured on the Switch.

Parameters </

snooping forwarding table information.

Restrictions None.

#### Example usage:

To view the IGMP snooping forwarding table for VLAN "Trinity":

DGS3048#show igmp\_snooping forwarding vlan default Command: show igmp\_snooping forwarding vlan default

VLAN Name : default Multicast group : 224.0.0.2

MAC address : 01-00-5E-00-00-02

Port Member : 3,4

**Total Entries: 1** 

DGS3048#

## show router\_ports

Purpose Used to display the currently configured router ports on the Switch.

Syntax show router\_ports {vlan <vlan\_name 32>} {static | dynamic}

Description This command will display the router ports currently configured on the

Switch.

Parameters vlan <vlan\_name 32> – The name of the VLAN on which the router port

resides.

static - Displays router ports that have been statically configured.

dynamic – Displays router ports that have been dynamically configured.

Restrictions None.

#### Example usage:

To display the router ports.

### DGS-3048 Layer 2 Switch CLI Reference Manual

DGS3048#show router\_port Command: show router\_port

VLAN Name : default Static router port : 1-10 Dynamic router port :

Total Entries: 1

# 802.1X COMMANDS

The DGS-3048 implements the server-side of the IEEE 802.1x Port-based Network Access Control. This mechanism is intended to allow only authorized users, or other network devices, access to network resources by establishing criteria for each port on the Switch that a user or network device must meet before allowing that port to forward or receive frames.

| Command                           | Parameters   |
|-----------------------------------|--|
| enable 802.1x                     |  |
| disable 802.1x                    |  |
| show 802.1x auth_state            | {ports <portlist>}</portlist>  |
| show 802.1x<br>auth_configuration | {ports <portlist>}</portlist>  |
| config 802.1x<br>auth_parameter   | ports [ <portlist>   all] [default   { port_control [force_unauth   auto   force_auth]   quiet_period <sec 0-65535="">   tx_period <sec 1-65535="">   supp_timeout <sec 1-65535="">   server_timeout <sec 1-65535="">   max_req <value 1-10="">   reauth_period <sec 1-65535="">   enable_reauth [enable   disable]}]</sec></value></sec></sec></sec></sec></portlist> |
| config 802.1x auth_protocol       | [radius   none]  |
| config 802.1x init                | [port_based ports [ <portlist>   all]</portlist>   |
| config 802.1x reauth              | [port_based ports [ <portlist>   all]</portlist>   |
| config radius add                 | [ <server_ip> ][ key <passwd 32="">] [default   {auth_port <udp_port_number 1-65535="">   acct_port <udp_port_number 1-65535="">}]</udp_port_number></udp_port_number></passwd></server_ip>  |
| config radius delete              | <server_ip></server_ip>  |
| config radius                     | <pre><server_ip> {  key <passwd 32="">   auth_port <udp_port_number 1-<br="">65535&gt;   acct_port <udp_port_number 1-65535="">}</udp_port_number></udp_port_number></passwd></server_ip></pre>  |
| show radius                       |  |

Each command is listed, in detail, in the following sections.

| enable 802.1x |   |  |
|---------------|---|--|
| Purpose       | Used to enable the 802.1x server on the Switch.   |  |
| Syntax        | enable 802.1x   |  |
| Description   | The <b>enable 802.1x</b> command enables the 802.1x Port-based Network Access control server application on the Switch. |  |
| Parameters    | None.   |  |
| Restrictions  | Only administrator-level users can issue this command.  |  |

#### Example usage:

To enable 802.1x switch wide:

| DGS3048#enable 802.1x |  |
|-----------------------|--|
|-----------------------|--|

Command: enable 802.1x

Success.

DGS3048#

## disable 802.1x

Purpose Used to disable the 802.1x server on the Switch.

Syntax disable 802.1x

Description The disable 802.1x command is used to disable the 802.1x Port-based

Network Access control server application on the Switch.

Parameters None.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To disable 802.1x on the Switch:

**DGS3048#disable 802.1x** 

Command: disable 802.1x

Success.

DGS3048#

# show 802.1x auth\_state

Purpose Used to display the current authentication state of the 802.1x server on the

Switch.

Syntax show 802.1x auth\_state {ports <portlist>}

Description The **show 802.1x command** is used to display the current 802.1x

authentication state of the specified ports of the Port-based Network Access

Control server application on the Switch.

The following details what is displayed:

Port number – Shows the physical port number on the Switch.

Auth PAE State: Initialize / Disconnected / Connecting / Authenticating / Authenticated / Held / ForceAuth / ForceUnauth – Shows the current state of

the Authenticator PAE.

Backend State: Request / Response / Fail / Idle / Initialize / Success /

 $\label{thm:timeout-Shows} \mbox{Timeout-Shows the current state of the Backend Authenticator.}$ 

Port Status: Authorized / Unauthorized – Shows the result of the authentication process. Authorized means that the user was authenticated, and can access the network. Unauthorized means that the user was not

authenticated, and cannot access the network.

Parameters ports <portlist> – Specifies a port or range of ports to be viewed.

Restrictions Only administrator-level users can issue this command.

### Example usage:

To display the 802.1x authentication states (stacking disabled) for Port-based 802.1x:

| Command: show 802.1x auth_state ports 1-5 |                |               |                   |
|---|----------------|---------------|-------------------|
| Port                                      | Auth PAE State | Backend State | Port Status       |
| 1   | ForceAuth      | Success       | Authorized        |
| 2   | ForceAuth      | Success       | <b>Authorized</b> |
| 3   | ForceAuth      | Success       | <b>Authorized</b> |
| 4   | ForceAuth      | Success       | <b>Authorized</b> |
| 5   | ForceAuth      | Success       | <b>Authorized</b> |

## show 802.1x auth\_configuration

Purpose Used to display the current configuration of the 802.1x server on the Switch.

Syntax show 802.1x auth\_configuration {ports <portlist>}

Description The show 802.1x command is used to display the current co

The show 802.1x command is used to display the current configuration of the 802.1x Port-based Network Access Control server application on the

The following details what is displayed:

802.1x Enabled/Disabled – Shows the current status of 802.1x functions on the Switch.

Authentication Protocol: Radius\_Eap – Shows the authentication protocol suite in use between the Switch and a RADIUS server.

Port number – Shows the physical port number on the Switch.

Capability: Authenticator/None – Shows the capability of 802.1x functions on the port number displayed above. There are four 802.1x capabilities that can be set on the Switch: Authenticator, Supplicant, Authenticator and Supplicant, and None.

Port Status: Authorized/Unauthorized – Shows the result of the authentication process. Authorized means that the user was authenticated, and can access the network. Unauthorized means that the user was not authenticated, and can not access the network.

PAE State: Initialize/Disconnected/Connecting/

Authenticating/Authenticated/Held /ForceAuth/ForceUnauth – Shows the current state of the Authenticator PAE.

Backend State: Request/Response/Fail/Idle/Initialize – Shows the current state of the Backend Authenticator.

AdminCtlDir: Both/In – Shows whether a controlled Port that is unauthorized will exert control over communication in both receiving and transmitting directions, or just the receiving direction.

OpenCtlDir: Both/In – Shows whether a controlled Port that is unauthorized will exert control over communication in both receiving and transmitting directions, or just the receiving direction.

Port Control: ForceAuth/ForceUnauth/Auto – Shows the administrative control over the port's authorization status. ForceAuth forces the

## show 802.1x auth\_configuration

Authenticator of the port to become Authorized. ForceUnauth forces the port to become Unauthorized.

QuietPeriod – Shows the time interval between authentication failure and the start of a new authentication attempt.

TxPeriod – Shows the time to wait for a response from a supplicant (user) to send EAP Request/Identity packets.

SuppTimeout – Shows the time to wait for a response from a supplicant (user) for all EAP packets, except for the Request/Identity packets.

ServerTimeout – Shows the length of time to wait for a response from a RADIUS server.

MaxReq – Shows the maximum number of times to retry sending packets to the supplicant.

ReAuthPeriod – Shows the time interval between successive reauthentications.

Parameters ports ports portlist> - Specifies a port or range of ports to be viewed.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To display the 802.1x configurations:

DGS3048#show 802.1x auth\_configuration ports 1 Command: show 802.1x auth\_configuration ports 1

802.1X : Enabled
Authentication Mode : Port\_based
AuthenticationMethod : Radius\_Eap

Port number AdminCrlDir : Both OpenCrlDir : Both Port Control : Auto QuietPeriod : 60 sec **TxPeriod** : 30 sec SuppTimeout :30 sec ServerTimeout: 30 sec MaxReq : 2 times : 3600 sec ReAuthPeriod ReAuthenticate: Disabled

ı

# config 802.1x auth\_parameter ports

Purpose Used to configure the 802.1x Authentication parameters on a range of

ports. The default parameter will return all ports in the specified range to

their default 802.1x settings.

Syntax config 802.1x auth\_parameter ports [<portlist> | all] [default |

{port\_control [force\_unauth | auto | force\_auth] | quiet\_period <sec 0-65535> | tx\_period <sec 1-65535> | supp\_timeout <sec 1-65535> | server\_timeout <sec 1-65535> | max\_req <value 1-10> | reauth\_period

<sec 300-4294967295> | enable reauth [enable | disable]}]

Description The **config 802.1x auth\_parameter** command is used to configure the

802.1x Authentication parameters on a range of ports. The default parameter will return all ports in the specified range to their default 802.1x

settings.

Parameters <portlist> - Specifies a port or range of ports to be configured.

all – Specifies all of the ports on the Switch.

*default* – Returns all of the ports in the specified range to their 802.1x default settings.

*port\_control* – Configures the administrative control over the authentication process for the range of ports.

- force\_auth Forces the Authenticator for the port to become authorized. Network access is allowed.
- auto Allows the port's status to reflect the outcome of the authentication process.
- force\_unauth Forces the Authenticator for the port to become unauthorized. Network access will be blocked.

*quiet\_period* < sec 0-65535> – Configures the time interval between authentication failure and the start of a new authentication attempt.

*tx\_period* <*sec 1-65535*> - Configures the time to wait for a response from a supplicant (user) to send EAP Request/Identity packets.

supp\_timeout <sec 1-65535> - Configures the time to wait for a response from a supplicant (user) for all EAP packets, except for the Request/Identity packets.

server\_timeout <sec 1-65535> - Configure the length of time to wait for a response from a RADIUS server.

max\_req <value 1-10> - Configures the number of times to retry sending packets to a supplicant (user).

*reauth\_period <sec* 300-4294967295> - Configures the time interval between successive re-authentications.

enable\_reauth [enable | disable] – Determines whether or not the Switch will re-authenticate. Enabled causes re-authentication of users at the time interval specified in the Re-authentication Period field, above.

Restrictions Only administrator-level users can issue this command.

Example usage:

To configure 802.1x authentication parameters for ports 1-20:

## **DGS-3048 Layer 2 Switch CLI Reference Manual**

DGS3048#config 802.1x auth\_parameter ports 1 – 20 direction both Command: config 802.1x auth\_parameter ports 1 – 20 direction both Success.

DGS3048#

| config 802.1x init |  |  |
|--------------------|--|--|
| Purpose            | Used to initialize the 802.1x function on a range of ports.  |  |
| Syntax             | config 802.1x init [port_based ports [ <portlist>   all]</portlist>  |  |
| Description        | The <b>config 802.1x init</b> command is used to immediately initialize the 802.1x functions on a specified range of ports or for specified MAC addresses operating from a specified range of ports. |  |
| Parameters         | port_based ports – This instructs the Switch to initialize 802.1x functions<br>based only on the port number. Ports approved for initialization can then be<br>specified.                            |  |
|                    | <ul> <li><portlist> – Specifies a port or range of ports to be initialized.</portlist></li> </ul>  |  |
|                    | <ul> <li>all – Specifies all of the ports on the Switch to be initialized.</li> </ul>  |  |
| Restrictions       | Only administrator-level users can issue this command.   |  |

### Example usage:

To initialize the authentication state machine of some or all:

DGS3048# config 802.1x init port\_based ports all Command: config 802.1x init port\_based ports all

Success.

DGS3048#

| config 802.1x auth_protocol |   |  |  |
|-----------------------------|---|--|--|
| Purpose                     | Used to specify AAA method.   |  |  |
| Syntax                      | config 802.1x auth_protocol[radius   none]  |  |  |
| Description                 | This command used to specify authentication, authorization, accounting method for use on interfaces IEEE 802.1x |  |  |
| Parameters                  | radius - Uses the list of RADIUS servers for authentication.  |  |  |
|                             | none – Uses no authentication.  |  |  |
| Restrictions                | Only administrator-level users can issue this command.  |  |  |

#### Example usage:

To use this command to specify RADIUS as AAA method.:

DGS3048# config 802.1x auth\_protocol radius

Success.

### DGS-3048 Layer 2 Switch CLI Reference Manual

| config 802   | .1x reauth   |
|--------------|--|
| Purpose      | Used to configure the 802.1x re-authentication feature of the Switch.  |
| Syntax       | config 802.1x reauth [port_based ports [ <portlist>   all]</portlist>  |
| Description  | The <b>config 802.1x reauth</b> command is used to re-authenticate a previously authenticated device based on a port number.   |
| Parameters   | port_based – This instructs the Switch to re-authorize 802.1x function<br>based only on the port number. Ports approved for re-authorization can<br>then be specified. |
|              | ports <portlist> - Specifies a port or range of ports to be reauthorized.</portlist>   |
|              | <ul> <li>all – Specifies all of the ports on the Switch to be reauthorized.</li> </ul>   |
| Restrictions | Only administrator-level users can issue this command.   |

### Example usage:

To configure 802.1x reauthentication for ports 1-18:

DGS3048#config 802.1x reauth port\_based ports 1-18 Command: config 802.1x reauth port\_based ports 1-18

Success.

| config radius add |   |  |  |
|-------------------|---|--|--|
| Purpose           | Used to configure the settings the Switch will use to communicate with a RADIUS server.   |  |  |
| Syntax            | config radius add [ <server_ip> ][ key <passwd 32="">] [default   {auth_port <udp_port_number 1-65535="">   acct_port <udp_port_number 1-65535="">}]</udp_port_number></udp_port_number></passwd></server_ip> |  |  |
| Description       | The <b>config radius add</b> command is used to configure the settings the Switch will use to communicate with a RADIUS server.   |  |  |
| Parameters        | <server_ip> - The IP address of the RADIUS server.</server_ip>  |  |  |
|                   | key – Specifies that a password and encryption key will be used between the Switch and the RADIUS server.   |  |  |
|                   | <ul> <li><passwd 32=""> – The shared-secret key used by the RADIUS server and the Switch. Up to 32 characters can be used.</passwd></li> </ul>  |  |  |
|                   | default – Returns all of the ports in the range to their default RADIUS settings.   |  |  |
|                   | <pre>auth_port <udp_port_number 1-65535=""> - The UDP port number for<br/>authentication requests. The default is 1812.</udp_port_number></pre>   |  |  |
|                   | <pre>acct_port <udp_port_number 1-65535=""> - The UDP port number for<br/>accounting requests. The default is 1813.</udp_port_number></pre>   |  |  |
| Restrictions      | Only administrator-level users can issue this command.  |  |  |

### Example usage:

To configure RADIUS server communication settings:

DGS3048#config radius add 10.48.74.121 key tomato default Command: config radius add 10.48.74.121 key tomato default Success.

DGS3048#

| config radius delete |   |  |  |
|----------------------|---|--|--|
| Purpose              | Used to delete a previously entered RADIUS server configuration.  |  |  |
| Syntax               | config radius delete <server_ip></server_ip>  |  |  |
| Description          | The <b>config radius delete</b> command is used to delete a previously entered RADIUS server configuration. |  |  |
| Parameters           | <server_ip> - The IP address of the RADIUS server.</server_ip>  |  |  |
| Restrictions         | Only administrator-level users can issue this command.  |  |  |

### Example usage:

To delete previously configured RADIUS server communication settings:

DGS3048#config radius delete 10.48.74.121

Command: config radius delete 10.48.74.121

Success.

DGS3048#

# config radius

Purpose Used to configure the Switch's RADIUS settings.

Syntax config radius <server\_ip> {| key <passwd 32> | auth\_port

<udp\_port\_number 1-65535> | acct\_port <udp\_port\_number 1-65535>}

Description The **config radius** command is used to configure the Switch's RADIUS

settings.

Parameters <server\_ip> - The IP address of the RADIUS server.

key – Specifies that a password and encryption key will be used between

the Switch and the RADIUS server.

<passwd 32> – The shared-secret key used by the RADIUS server

and the Switch. Up to 32 characters can be used.

default - Returns all of the ports in the range to their default RADIUS

settings.

auth\_port <udp\_port\_number 1-65535> - The UDP port number for

authentication requests. The default is 1812.

acct\_port <udp\_port\_number 1-65535> - The UDP port number for

accounting requests. The default is 1813.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To configure RADIUS settings:

DGS3048#config radius 1 10.48.74.121 key dlink default Command: config radius 1 10.48.74.121 key dlink default

Success.

DGS3048#

## show radius

Purpose Used to display the current RADIUS configurations on the Switch.

Syntax show radius

Description The show radius command is used to display the current RADIUS

configurations on the Switch.

Parameters None.

Restrictions None.

Example usage:

To display RADIUS settings on the Switch:

| DGS3048#show radius<br>Command: show radius |            |                     |                     |        |         |
|---|------------|---------------------|---------------------|--------|---------|
| Index                                       | IP Address | Auth-Port<br>Number | Acct-Port<br>Number | Status | Key     |
| 1   | 10.1.1.1   | <br>1812            | 1813                | Active | switch  |
| 2   | 20.1.1.1   | 1800                | 1813                | Active | des3226 |
| 3   | 30.1.1.1   | 1812                | 1813                | Active | dlink   |
| Total Entries : 3                           |            |                     |                     |        |         |
| DGS3  | 048#       |                     |                     |        |         |

# ACCESS AUTHENTICATION CONTROL COMMANDS

Please note that user granted access to the Switch will be granted normal user privileges on the Switch. To gain access to admin level privileges, the user must enter the *enable admin* command and then enter a password, which was previously configured by the administrator of the Switch.

The Access Authentication Control commands let you secure access to the Switch using the TACACS+ and RADIUS protocols. When a user logs in to the Switch or tries to access the administrator level privilege, he or she is prompted for a password. If TACACS+ / RADIUS authentication is enabled on the Switch, it will contact a TACACS+ / RADIUS server to verify the user. If the user is verified, he or she is granted access to the Switch.

The Switch's software supports the following versions of TACACS:

• TACACS+ (Terminal Access Controller Access Control System plus) — Provides detailed access control for authentication for network devices. TACACS+ is facilitated through Authentication commands via one or more centralized servers. The TACACS+ protocol encrypts all traffic between the Switch and the TACACS+ daemon, using the TCP protocol to ensure reliable delivery.

The Switch also supports the RADIUS protocol for authentication using the Access Authentication Control commands. RADIUS or Remote Authentication Dial In User Server also uses a remote server for authentication and can be responsible for receiving user connection requests, authenticating the user and returning all configuration information necessary for the client to deliver service through the user. RADIUS may be facilitated on this Switch using the commands listed in this section.

In order for the TACACS+ security function to work properly, a TACACS+ server must be configured on a device other than the Switch, called a *server host* and it must include usernames and passwords for authentication. When the user is prompted by the Switch to enter usernames and passwords for authentication, the Switch contacts the TACACS+ server to verify, and the server will respond with one of three messages:

- A) The server verifies the username and password, and the user is granted normal user privileges on the Switch.
- B) The server will not accept the username and password and the user is denied access to the Switch.
- C) The server doesn't respond to the verification query. At this point, the Switch receives the timeout from the server and then moves to the next method of verification configured in the method list.

The administrator for the Switch may set up 4 different authentication techniques per user-defined *method list* (TACACS+ / RADIUS / local / none) for authentication. These techniques will be listed in an order preferable, and defined by the user for normal user authentication on the Switch, and may contain up to eight authentication techniques. When a user attempts to access the Switch, the Switch will select the first technique listed for authentication. If the first technique goes through its *server hosts and* no authentication is returned, the Switch will then go to the next technique listed in the server group for authentication, until the authentication has been verified or denied, or the list is exhausted.

Please note that user granted access to the Switch will be granted normal user privileges on the Switch. To gain access to admin level privileges, the user must enter the *enable admin* command and then enter a password, which was previously configured by the administrator of the Switch.

The Access Authentication Control commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command                                 | Parameters  |
|---|---|
| create authen_login<br>method_list_name | <string 12=""></string>   |
| config authen_login                     | [default   method_list_name <string 12="">] method {tacacs+   radius   local   none}</string> |
| delete authen_login                     | <string 12=""></string>   |

| Command                               | Parameters  |
|---------------------------------------|---|
| method_list_name                      |   |
| show authen_login                     | {all   default   method_list_name <string 12="">}</string>  |
| create authen_enable method_list_name | <string 12=""></string>   |
| config authen_enable                  | [default   method_list_name <string 12="">] method {tacacs+   radius   local_enable   none}</string>  |
| delete authen_enable method_list_name | <string 12=""></string>   |
| show authen_enable                    | [default   method_list_name <string 12="">   all]</string>  |
| config authen application             | {console   telnet   ssh   all] [login   enable] [default   method_list_name <string 12="">]</string>  |
| show authen application               |   |
| create authen server_host             | <pre><ipaddr> protocol [tacacs+   radius] {port <int 1-65535="">   key [<key_string 128="">   none]   timeout <int 1-30="">   retransmit <int 1-10="">}</int></int></key_string></int></ipaddr></pre> |
| config authen server_host             | <pre><ipaddr> protocol [tacacs+   radius] {port <int 1-65535="">   key [<key_string 128="">   none]   timeout <int 1-30="">   retransmit <int 1-10="">}</int></int></key_string></int></ipaddr></pre> |
| delete authen server_host             | <ipaddr> protocol [tacacs+   radius]</ipaddr>   |
| show authen server_host               |   |
| local_enable admin                    |   |
| config admin local_enable             | <pre><password 15=""></password></pre>  |

Each command is listed, in detail, in the following sections.

| create authen_login method_list_name |   |  |  |
|--------------------------------------|---|--|--|
| Purpose                              | Used to create a user defined method list of authentication methods for users logging on to the Switch.   |  |  |
| Syntax                               | create authen_login method_list_name <string 12=""></string>  |  |  |
| Description                          | This command is used to create a list for authentication techniques for user login. The Switch can support up to eight method lists, but one is reserved as a default and cannot be deleted. Multiple method lists must be created and configured separately. |  |  |
| Parameters                           | <string 12=""> - Enter an alphanumeric string of up to 15 characters to define the given method list.</string>  |  |  |
| Restrictions                         | Only administrator-level users can issue this command.  |  |  |

## Example usage:

To create the method list "Trinity.":

DGS3048#create authen\_login method\_list\_name Trinity

Command: create authen\_login method\_list\_name Trinity

Success.

DGS3048#

# config authen\_login

Purpose Used to configure a user-defined or default method list of

authentication methods for user login.

Syntax config authen login [default | method list name <string 12>] method {tacacs+ | radius | local | none}

This command will configure a user-defined or default method list of Description

authentication methods for users logging on to the Switch. The sequence of methods implemented in this command will affect the authentication result. For example, if a user enters a sequence of methods like tacacs+ - local, the Switch will send an authentication request to the tacacs+ host in the server group. If no response comes from the server host, the Switch will send an authentication request to the tacacs+ host in the server group and so on, until the list is exhausted. At that point, the Switch will restart the same sequence with the following protocol listed, tacacs+. If no authentication takes place using the tacacs+ list, the local account database set in the Switch is used to authenticate the user. When the local method is used, the privilege level will be dependant on the local account privilege configured on the Switch.

Successful login using any of these methods will give the user a "user" privilege only. If the user wishes to upgrade his or her status to the administrator level, the user must implement the local enable admin command, followed by a previously configured password. (See the local enable admin part of this section for more detailed information, concerning the local\_enable admin command.)

default - The default method list for access authentication, as defined by the user. The user may choose one or a combination of up to four (4) of the following authentication methods:

- tacacs+ Adding this parameter will require the user to be authenticated using the TACACS+ protocol from the remote TACACS+ server hosts of the TACACS+ server group list.
- radius Adding this parameter will require the user to be authenticated using the RADIUS protocol from the RADIUS server listed in the server group list.
- local Adding this parameter will require the user to be authenticated using the local user account database on the Switch.
- none Adding this parameter will require no authentication to access the Switch.

method\_list\_name - Enter a previously implemented method list name defined by the user. The user may add one, or a combination of up to four (4) of the following authentication methods to this method list:

tacacs+ - Adding this parameter will require the user to be authenticated using the TACACS protocol from a remote TACACS server.

**Parameters** 

# config authen\_login

- radius Adding this parameter will require the user to be authenticated using the RADIUS protocol from a previously configured RADIUS server.
- local Adding this parameter will require the user to be authenticated using the local user account database on the Switch.
- none Adding this parameter will require no authentication to access the Switch.

**NOTE:** Entering *none* or *local* as an authentication protocol will override any other authentication that follows it on a method list or on the default method list

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To configure the user defined method list "Trinity" with authentication methods TACACS+and local, in that order.

DGS3048#config authen\_login method\_list\_name Trinity method tacacs+local

Command: config authen\_login method\_list\_name Trinity method tacacs+ local

Success.

DGS3048#

#### Example usage:

To configure the default method list with authentication method TACACS+ and local, in that order:

DGS3048#config authen\_login default method xtacacs tacacs+ local Command: config authen\_login default method xtacacs tacacs+ local

Success.

| delete authen_login method_list_name |   |  |  |
|--------------------------------------|---|--|--|
| Purpose                              | Used to delete a previously configured user defined method list of authentication methods for users logging on to the Switch. |  |  |
| Syntax                               | delete authen_login method_list_name <string 12=""></string>  |  |  |
| Description                          | This command is used to delete a list for authentication methods for user login.  |  |  |
| Parameters                           | <string 12=""> - Enter an alphanumeric string of up to 15 characters to define the given method list to delete.</string>      |  |  |

# delete authen\_login method\_list\_name

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To delete the method list name "Trinity":

DGS3048#delete authen\_login method\_list\_name Trinity Command: delete authen\_login method\_list\_name Trinity

Success.

DGS3048#

show authen\_login

| Purpose     | Used to display a previously configured user defined method list of authentication methods for users logging on to the Switch.   |  |
|-------------|--|--|
| Syntax      | show authen_login [default   method_list_name <string 12="">   all]</string>   |  |
| Description | This command is used to show a list of authentication methods for user login. The window will display the following parameters:  |  |
|             | <ul> <li>Method List Name – The name of a previously configured<br/>method list name.</li> </ul>   |  |
|             | <ul> <li>Priority – Defines which order the method list protocols will<br/>be queried for authentication when a user attempts to log on<br/>to the Switch. Priority ranges from 1 (highest) to 4 (lowest).</li> </ul>  |  |
|             | <ul> <li>Method Name – Defines which security protocols are<br/>implemented, per method list name.</li> </ul>  |  |
|             | Comment – Defines the type of Method. User-defined Group<br>refers to server group defined by the user. Built-in Group<br>refers to the TACACS+ and RADIUS security protocols<br>which are permanently set in the Switch. Keyword refers to<br>authentication using a technique instead of TACACS+ and<br>RADIUS, which are local (authentication through the user<br>account on the Switch) and none (no authentication<br>necessary to access any function on the Switch). |  |

default - Entering this parameter will display the default method list

method\_list\_name <string 12> - Enter an alphanumeric string of up

all - Entering this parameter will display all the authentication login

to 12 characters to define the given method list to view.

Only administrator-level users can issue this command.

methods currently configured on the Switch.

#### Example usage:

**Parameters** 

Restrictions

To view all method list configurations:

DGS3048#show authen\_login method\_list\_name all Command: show authen\_login method\_list\_name all

for users logging on to the Switch.

| Method List Name | Priority | Method Name | Comment                   |
|------------------|----------|-------------|---------------------------|
|                  |          |             |                           |
| Darren           | 1        | tacacs+     | Built-in Group            |
| default          | 1        | radius      | Built-in Group            |
| GoHabs!          | 1        | Newfie      | <b>User-defined Group</b> |
| Trinity          | 1        | local       | Keyword                   |
| DGS3048#         |          |             |                           |

| create authen_enable method_list_name |   |  |  |
|---------------------------------------|---|--|--|
| Purpose                               | Used to create a user-defined method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.   |  |  |
| Syntax                                | create authen_enable method_list_name <string 12=""></string>   |  |  |
| Description                           | This command is used to promote users with normal level privileges to Administrator level privileges using authentication methods on the Switch. Once a user acquires normal user level privileges on the Switch, he or she must be authenticated by a method on the Switch to gain administrator privileges on the Switch, which is defined by the Administrator. A maximum of eight (8) enable method lists can be implemented on the Switch. |  |  |
| Parameters                            | <string 12=""> – Enter an alphanumeric string of up to 12 characters to define the given enable method list to create.</string>   |  |  |
| Restrictions                          | Only administrator-level users can issue this command.  |  |  |

### Example usage:

To create a user-defined method list, named "Permit" for promoting user privileges to Administrator privileges:

DGS3048#create authen\_enable method\_list\_name Permit
Command: show authen\_login method\_list\_name Permit
Success.

DGS3048#

| config authen_enable |  |  |
|----------------------|--|--|
| Purpose              | Used to configure a user-defined method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.   |  |
| Syntax               | config authen_enable [default   method_list_name <string 12="">] method {tacacs+   radius   local_enable   none}</string>  |  |
| Description          | This command is used to promote users with normal level privileges to Administrator level privileges using authentication methods on the Switch. Once a user acquires normal user level privileges on the Switch, he or she must be authenticated by a method on the Switch to gain administrator privileges on the Switch, which is defined by the Administrator. A maximum of eight (8) method lists can be implemented on the Switch. |  |

## config authen\_enable

The sequence of methods implemented in this command will affect the authentication result. For example, if a user enters a sequence of methods like  $tacacs + -local\_enable$ , the Switch will send an authentication request to the first tacacs host in the server group. If no verification is found, the Switch will send an authentication request to the second tacacs host in the server group and so on, until the list is exhausted. At that point, the Switch will restart the same sequence with the following protocol listed, tacacs+. If no authentication takes place using the tacacs+ list, the tacac

Successful authentication using any of these methods will give the user a "Admin" privilege.

#### **Parameters**

default – The default method list for administration rights authentication, as defined by the user. The user may choose one or a combination of up to four (4) of the following authentication methods:

- tacacs+ Adding this parameter will require the user to be authenticated using the TACACS+ protocol from the remote TACACS+ server hosts of the TACACS+ server group list.
- radius Adding this parameter will require the user to be authenticated using the RADIUS protocol from a remote RADIUS server previously implemented on the Switch.
- local\_enable Adding this parameter will require the user to be authenticated using the local user account database on the Switch.
- none Adding this parameter will require no authentication to access the Switch.

method\_list\_name — Enter a previously implemented method list name defined by the user (**create authen\_enable**). The user may add one, or a combination of up to four (4) of the following authentication methods to this method list:

- tacacs+ Adding this parameter will require the user to be authenticated using the TACACS+ protocol from a remote TACACS+ server.
- radius Adding this parameter will require the user to be authenticated using the RADIUS protocol from a remote RADIUS server previously implemented on the Switch.
- local\_enable Adding this parameter will require the user to be authenticated using the local user account database on the Switch. The local enable password of the device can be configured using the "config admin local\_password" command.
- none Adding this parameter will require no authentication to access the administration level privileges on the Switch.

#### Restrictions

Only administrator-level users can issue this command.

#### Example usage:

To configure the user defined method list "Trinity" with authentication methods TACACS+and local, in that order.

DGS3048#config authen\_enable method\_list\_name Trinity method tacacs + local

Command: config authen\_enable method\_list\_name Trinity method tacacs xtacacs local

Success.

DGS3048#

#### Example usage:

To configure the default method list with authentication methods TACACS+ and local, in that order:

DGS3048#config authen\_enable default method tacacs+ local Command: config authen\_enable default method tacacs+ local

Success.

DGS3048#

| delete authen_enable method_list_name |   |  |
|---------------------------------------|---|--|
| Purpose                               | Used to delete a user-defined method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch. |  |
| Syntax                                | delete authen_enable method_list_name <string 12=""></string>   |  |
| Description                           | This command is used to delete a user-defined method list of authentication methods for promoting user level privileges to Administrator level privileges.      |  |
| Parameters                            | <string 12=""> — Enter an alphanumeric string of up to 12 characters to define the given enable method list to delete.</string>                                 |  |
| Restrictions                          | Only administrator-level users can issue this command.  |  |

#### Example usage:

To delete the user-defined method list "Permit":

DGS3048#delete authen\_enable method\_list\_name Permit Command: delete authen\_enable method\_list\_name Permit

Success.

| show authen  | _enable  |  |
|--------------|--|--|
| Purpose      | Used to display the method list of authentication methods for promoting normal user level privileges to Administrator level privileges on the Switch.  |  |
| Syntax       | show authen_enable [all   default   method_list_name <string 12="">]</string>  |  |
| Description  | This command is used to delete a user-defined method list of authentication methods for promoting user level privileges to Administrator level privileges. The window will display the following parameters:   |  |
|              | <ul> <li>Method List Name – The name of a previously configured<br/>method list name.</li> </ul>   |  |
|              | <ul> <li>Priority – Defines which order the method list protocols will be<br/>queried for authentication when a user attempts to log on to<br/>the Switch. Priority ranges from 1(highest) to 4 (lowest).</li> </ul>   |  |
|              | <ul> <li>Method Name – Defines which security protocols are<br/>implemented, per method list name.</li> </ul>  |  |
|              | Comment – Defines the type of Method. User-defined Group<br>refers to server groups defined by the user. Built-in Group<br>refers to the TACACS+ and RADIUS security protocols which<br>are permanently set in the Switch. Keyword refers to<br>authentication using a technique INSTEAD of TACACS+ and<br>RADIUS which are local (authentication through the<br>local_enable password on the Switch) and none (no<br>authentication necessary to access any function on the<br>Switch). |  |
| Parameters   | default – Entering this parameter will display the default method list for users attempting to gain access to Administrator level privileges on the Switch.  |  |
|              | method_list_name <string 15=""> - Enter an alphanumeric string of up to 15 characters to define the given method list to view.</string>  |  |
|              | <ul> <li>all – Entering this parameter will display all the authentication login<br/>methods currently configured on the Switch.</li> </ul>  |  |
| Restrictions | None.  |  |

## Example usage:

To display all method lists for promoting user level privileges to administrator level privileges.

| DGS3048#show au   | _        |             |                    |
|-------------------|----------|-------------|--------------------|
| Command: show a   | uthen_en | able all    |                    |
| Method List Name  | Priority | Method Name | Comment            |
| Permit            | 1        | tacacs+     | Built-in Group     |
|                   | 2        | tacacs      | Built-in Group     |
|                   | 3        | Darren      | User-defined Group |
|                   | 4        | local       | Keyword            |
| default           | 1        | tacacs+     | Built-in Group     |
|                   | 2        | local       | Keyword            |
| Total Entries : 2 |          |             |                    |
|                   |          |             |                    |

# DGS3048#

| config auther | n application  |
|---------------|--|
| Purpose       | Used to configure various applications on the Switch for authentication using a previously configured method list.   |
| Syntax        | config authen application {console   telnet   ssh   all] [login   enable] [default   method_list_name <string 12="">]</string>   |
| Description   | This command is used to configure switch configuration applications (console, telnet, ssh, web) for login at the user level and at the administration level ( <i>authen_enable</i> ) utilizing a previously configured method list.                            |
| Parameters    | application – Choose the application to configure. The user may choose one of the following four applications to configure.  |
|               | <ul> <li>console – Choose this parameter to configure the<br/>command line interface login method.</li> </ul>  |
|               | <ul> <li>telnet – Choose this parameter to configure the telnet login<br/>method.</li> </ul>   |
|               | <ul> <li>ssh - Choose this parameter to configure the SSH (Secure<br/>Shell) login method.</li> </ul>  |
|               | <ul> <li>http – Choose this parameter to configure the web interface<br/>login method.</li> </ul>  |
|               | <ul> <li>all – Choose this parameter to configure all applications<br/>(console, telnet, web, ssh) login method.</li> </ul>  |
|               | <ul><li>login – Use this parameter to configure an application for normal login on the user level, using a previously configured method list.</li></ul>  |
|               | enable - Use this parameter to configure an application for upgrading a normal user level to administrator privileges, using a previously configured method list.  |
|               | default – Use this parameter to configure an application for user authentication using the default method list.  |
|               | method_list_name <string 12=""> — Use this parameter to configure an application for user authentication using a previously configured method list. Enter a alphanumeric string of up to 15 characters to define a previously configured method list.</string> |
| Restrictions  | Only administrator-level users can issue this command.   |

### Example usage:

To configure the default method list for the web interface:

DGS3048#config authen application http login default Command: config authen application http login default

Success.

| show authen application |   |  |
|-------------------------|---|--|
| Purpose                 | Used to display authentication methods for the various applications on the Switch.  |  |
| Syntax                  | show authen application   |  |
| Description             | This command will display all of the authentication method lists (login, enable administrator privileges) for switch configuration applications (console, telnet, SSH, web) currently configured on the Switch. |  |
| Parameters              | None.   |  |
| Restrictions            | None.   |  |

## Example usage:

To display the login and enable method list for all applications on the Switch:

| DGS3048#sh                       | now authen applicat | ion                |  |
|----------------------------------|---------------------|--------------------|--|
| Command: show authen application |                     |                    |  |
| Application                      | Login Method List   | Enable Method List |  |
| Console                          | default             | default            |  |
| Telnet                           | Trinity             | default            |  |
| SSH                              | default             | default            |  |
| HTTP                             | default             | default            |  |
| DGS3048#                         |                     |                    |  |

| create auther | n server_host  |
|---------------|--|
| Purpose       | Used to create an authentication server host.  |
| Syntax        | create authen server_host <ipaddr> protocol [tacacs+   radius] {port <int 1-65535="">   key [<key_string 128="">   none]   timeout <int 1-30="">   retransmit <int 1-10="">}</int></int></key_string></int></ipaddr>   |
| Description   | This command will create an authentication server host for the TACACS+ and RADIUS security protocols on the Switch. When a user attempts to access the Switch with authentication protocol enabled, the Switch will send authentication packets to a remote TACACS+ or RADIUS server host on a remote host. The TACACS+ or RADIUS server host will then verify or deny the request and return the appropriate message to the Switch. More than one authentication protocol can be run on the same physical server host but, remember that TACACS+ and RADIUS are separate entities and are not compatible with each other. The maximum supported number of server hosts is 16. |
| Parameters    | <pre>server_host <ipaddr> - The IP address of the remote server host to add.</ipaddr></pre>  |
|               | protocol – The protocol used by the server host. The user may<br>choose one of the following:  |
|               | <ul> <li>tacacs+ - Enter this parameter if the server host utilizes<br/>the TACACS+ protocol.</li> </ul>   |

# create authen server\_host

 radius - Enter this parameter if the server host utilizes the RADIUS protocol.

port <int 1-65535> - Enter a number between 1 and 65535 to define the virtual port number of the authentication protocol on a server host. The default port number is 49 for TACACS+ servers but the user may set a unique port number for higher security. The default port number of the authentication protocol on the RADIUS server is 1812.

key <key\_string 128> - Authentication key to be shared with a configured TACACS+ server only. Specify an alphanumeric string up to 128 characters.

timeout <int 1-30> - Enter the time in seconds the Switch will wait for the server host to reply to an authentication request. The default value is 5 seconds.

retransmit <int 1-10> - Enter the value in the retransmit field to change how many times the device will resend an authentication request when the TACACS+ or RADIUS server does not respond.

Restrictions

Only administrator-level users can issue this command.

#### Example usage:

To create a TACACS+ authentication server host, with port number 1234, a timeout value of 10 seconds and a retransmit count of 5.

DGS3048#create authen server\_host 10.1.1.121 protocol tacacs+ port 1234 timeout 10 retransmit 5

Command: create authen server\_host 10.1.1.121 protocol tacacs+ port 1234 timeout 10 retransmit 5

Success.

| config authen server_host |  |  |
|---------------------------|--|--|
| Purpose                   | Used to configure a user-defined authentication server host.   |  |
| Syntax                    | config authen server_host <ipaddr> protocol [tacacs+   radius] {port <int 1-65535="">   key [<key_string 128="">   none]   timeout <int 1-30="">   retransmit <int 1-10="">}</int></int></key_string></int></ipaddr>   |  |
| Description               | This command will configure a user-defined authentication server host for the TACACS+ and RADIUS security protocols on the Switch. When a user attempts to access the Switch with authentication protocol enabled, the Switch will send authentication packets to a remote TACACS+/RADIUS server host on a remote host. The TACACS+/RADIUS server host will then verify or deny the request and return the appropriate message to the Switch. More than one authentication protocol can be run on the same physical server host but, remember that TACACS+ are separate entities and are not compatible with each other. The maximum supported number of server hosts is 16. |  |
| Parameters                | server_host <ipaddr> - The IP address of the remote server host to</ipaddr>  |  |

# config authen server\_host

be altered.

*protocol* – The protocol used by the server host. The user may choose one of the following:

- tacacs+ Enter this parameter if the server host utilizes the TACACS+ protocol.
- radius Enter this parameter if the server host utilizes the RADIUS protocol.

port <int 1-65535> - Enter a number between 1 and 65535 to define the virtual port number of the authentication protocol on a server host. The default port number is 49 for TACACS+ servers but the user may set a unique port number for higher security. The default port number for RADIUS servers is 1812.

key <key\_string 254> - Authentication key to be shared with a configured TACACS+ server only. Specify an alphanumeric string up to 254 characters or choose none.

timeout <int 1-30> - Enter the time in seconds the Switch will wait for the server host to reply to an authentication request. The default value is 5 seconds.

retransmit <int 1-10> - Enter the value in the retransmit field to change how many times the device will resend an authentication request when the TACACS+ or RADIUS server does not respond. This field is inoperable for the TACACS+ protocol.

Restrictions Only a

Only administrator-level users can issue this command.

#### Example usage:

To configure a TACACS+ authentication server host, with port number 4321, a timeout value of 12 seconds and a retransmit count of 4.

DGS3048#config authen server\_host 10.1.1.121 protocol tacacs+port 4321 timeout 12 retransmit 4

Command: config authen server\_host 10.1.1.121 protocol tacacs+ port 4321 timeout 12 retransmit 4

Success.

| delete authen server_host |   |  |
|---------------------------|---|--|
| Purpose                   | Used to delete a user-defined authentication server host.   |  |
| Syntax                    | delete authen server_host <ipaddr> protocol [tacacs+   radius]</ipaddr>                                     |  |
| Description               | This command is used to delete a user-defined authentication server host previously created on the Switch.  |  |
| Parameters                | server_host <ipaddr> - The IP address of the remote server host to delete.</ipaddr>                         |  |
|                           | <i>protocol</i> – The protocol used by the server host to delete. The user may choose one of the following: |  |
|                           | <ul> <li>tacacs+ - Enter this parameter if the server host utilizes</li> </ul>                              |  |

# delete authen server\_host

the TACACS+ protocol.

 radius - Enter this parameter if the server host utilizes the RADIUS protocol.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To delete a user-defined TACACS+ authentication server host:

DGS3048#delete authen server\_host 10.1.1.121 protocol tacacs+ Command: delete authen server\_host 10.1.1.121 protocol tacacs+

Success.

DGS3048#

| show author  | en server_host   |
|--------------|--|
| Purpose      | Used to view a user-defined authentication server host.  |
| Syntax       | show authen server_host  |
| Description  | This command is used to view user-defined authentication server hosts previously created on the Switch.  |
|              | The following parameters are displayed:  |
|              | IP address – The IP address of the authentication server host.   |
|              | Protocol – The protocol used by the server host. Possible results will include tacacs+ and radius.   |
|              | Port – The virtual port number on the server host. The default value is 49.  |
|              | Timeout - The time in seconds the Switch will wait for the server host to reply to an authentication request.  |
|              | Retransmit - The value in the retransmit field denotes how many times the device will resend an authentication request when the TACACS server does not respond. This field is inoperable for the tacacs+ protocol. |
|              | Key - Authentication key to be shared with a configured TACACS+ server only.   |
| Parameters   | None.  |
| Restrictions | Only administrator-level users can issue this command.   |

#### Example usage:

To view authentication server hosts currently set on the Switch:

DGS3048#show authen server\_host Command: show authen server\_host

IP Address Protocol Port Timeout Retransmit Key
-----10.53.13.94 TACACS+ 49 5 no use ------

**Total Entries: 1** 

DGS3048#

| local_enable admin |   |  |
|--------------------|---|--|
| Purpose            | Used to promote user level privileges to administrator level privileges   |  |
| Syntax             | local_enable admin  |  |
| Description        | This command is for users who have logged on to the Switch on the normal user level, to become promoted to the administrator level. After logging on to the Switch users, will have only user level privileges. To gain access to administrator level privileges, the user will enter this command and will have to enter an authentication password. Possible authentication methods for this function include TACACS+/RADIUS, user defined server groups, local enable (local account on the Switch), or no authentication (none). Because TACACS+ and RADIUS do not support the enable function, the user must create a special account on the server host which has the username "enable", and a password configured by the administrator that will support the "enable" function. This function becomes inoperable when the authentication policy is disabled. |  |

Parameters None.

Restrictions Only users who have the authentication password can issue this

command.

### Example usage:

To enable administrator privileges on the Switch:

DGS3048#local\_enable admin
Password: \*\*\*\*\*

DGS3048#

| config admin local_enable |  |
|---------------------------|--|
| Purpose                   | Used to configure the local enable password for administrator level privileges.  |
| Syntax                    | config admin local_enable <password 15=""></password>  |
| Description               | This command will configure the locally enabled password for the <b>local_enable admin</b> command. When a user chooses the "local_enable" method to promote user level privileges to administrator privileges, he or she will be prompted to enter the password configured here, that is set locally on the Switch. |
| Parameters                | <password 15=""> - After entering this command, the user will be prompted to enter the old password, then a new password in an</password>  |

| config admin local_enable |  |
|---------------------------|--|
|                           | alphanumeric string of no more than 15 characters, and finally prompted to enter the new password again to confirm. See the example below. |
| Restrictions              | Only users who have the authentication password can issue this command.  |

### Example usage:

To configure the password for the "local\_enable" authentication method.

DGS3048#config admin local\_enable
Command: config admin local\_enable
Enter the old password: \*\*\*\*\*\*
Enter the case-sensitive new password:\*\*\*\*\*
Enter the new password again for confirmation:\*\*\*\*\*
Success.

DGS3048#

## SSH COMMANDS

The Secure Shell (SSH) commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command             | Parameters   |
|---------------------|--|
| enable ssh          |  |
| disable ssh         |  |
| config ssh authmode | publickey [enable   disable]   |
| show ssh authmode   |  |
| config ssh server   | { timeout <sec 120-600="">   port <tcp_port_number 1-65535=""> }</tcp_port_number></sec> |
| show ssh server     |  |
| show ssh algorithm  |  |
| config ssh crypto   | <username 1-48=""> [ rsa   dsa ]</username>  |
| show ssh crypto     |  |
| delete ssh crypto   | username <word 1-48=""></word>   |

Each command is listed, in detail, in the following sections.

| enable shh   |  |
|--------------|--|
| Purpose      | Used to enable SSH.                                    |
| Syntax       | enable ssh   |
| Description  | This command allows you to enable SSH on the Switch.   |
| Parameters   | None.  |
| Restrictions | Only administrator-level users can issue this command. |

#### Usage Example:

To enable SSH:

| DGS3048#enable ssh Command: enable ssh |
|--|
| Success.                               |
| DGS3048#                               |

#### disable ssh

Purpose Used to disable SSH.

Syntax disable ssh

Description This command allows you to disable SSH on the Switch.

Parameters None.

Restrictions Only administrator-level users can issue this command.

#### Usage Example:

To disable SSH:

DGS3048# disable ssh Command: disable ssh

Success.

DGS3048#

#### config ssh authmode

Purpose Used to configure the SSH authentication mode setting.

Syntax config ssh authmode publickey [enable | disable]

Description This command will allow you to configure the SSH authentication

mode for users attempting to access the Switch.

Parameters publickey - This parameter may be chosen if the administrator

wishes to use a publickey configuration set on a SSH server, for

authentication.

[enable | disable] - This allows you to enable or disable SSH

authentication on the Switch.

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To enable the SSH authentication mode by password:

DGS3048#config ssh authmode public enable Command: config ssh authmode public enable

Success.

DGS3048#

#### show ssh authmode

Purpose Used to display the SSH authentication mode setting.

Syntax show ssh authmode

Description This command will allow you to display the current SSH

authentication set on the Switch.

Parameters None.
Restrictions None.

#### Example usage:

To view the current authentication mode set on the Switch:

DGS3048#show ssh authmode

Command: show ssh authmode

The SSH User Authentication Support

Publickey : Enabled

DGS3048#

## config ssh server

Purpose Used to configure the SSH server.

Syntax config ssh server { timeout <sec 120-600> | port

<tcp\_port\_number 1-65535> }

Description This command allows you to configure the SSH server.

Parameters timeout <sec 120-600> - Allows the user to set the connection

timeout. The user may set a time between 120 and 600 seconds.

The default is 120 seconds.

port <tcp\_port\_number 1-65535> - The TCP port number of the server. TCP ports are numbered between 1 and 65535. The "well-

known" port for the SSH management software is 22.

Restrictions Only administrator-level users can issue this command.

#### Usage Example:

To configure the SSH server:

DGS3048# config ssh server timeout 300

Command: config ssh server timeout 300

Success.

#### show ssh server

Purpose Used to display the SSH server setting.

Syntax show ssh server

Description This command allows you to display the current SSH server setting.

Parameters None.
Restrictions None.

#### Usage Example:

To display the SSH server:

DGS3048# show ssh server

Command: show ssh server

SSH Server Status : Disabled

SSH Max Session : 1

Connection timeout : 600 (sec)

Authenticate failed attempts : 3 Listened Port Number : 22

DGS3048#

## config ssh crypto

Purpose Used to specify SSH public key is manually configured.

Syntax config ssh crypto <username 1- 48> [ rsa | dsa ]

Description This command allow you to specify SSH public key by manually

configured. The key string needs to be in UU-encoded DER fomat. UU-encoded format is the same format in authorized\_keys file used

by OpenSSH.

Parameters <user name 1-48> - Specifies the username of remote SSH client.

rsa – Indicated RSA key pair.dsa – Indicated DSA key pair.

Restrictions Only administrator-level users can issue this command.

#### Usage Example:

To specify SSH public key for Bob use.:

DGS3048# config ssh crypto bob

Command: config ssh crypto bob

rsa RSA key

dsa DSA(DSS) key

#### show ssh crypto

Purpose Used to display SSH public key stored on the device.

Syntax show ssh crypto

Description This command allows user display SSH public key stored on the

device.

Parameters None

Restrictions Only administrator-level users can issue this command.

#### Usage Example:

To show SSH public key on device::

| DGS3048# show ssh crypto |             |  |
|--------------------------|-------------|--|
| Username                 | Fingerprint |  |
| DGS3048#                 |             |  |

Purpose Used to remove specified user's SSH public key from device

Syntax Delete ssh crypto username <word 1-48>

Description This command allow administrator to delete specific user's SSH

public key.

Parameters user name <word 1-48> - Specifies the username of remote SSH

client.

Restrictions Only administrator-level users can issue this command.

#### Usage Example:

To delete SSH public key of Bob::

| DGS3048# Delete ssh crypto bob |  |
|--------------------------------|--|
| Success.                       |  |
| DGS3048#                       |  |

## Purpose Used to display the SSH algorithm setting. Syntax show ssh algorithm Description This command will display the current SSH algorithm setting status. Parameters None.

#### Usage Example:

Restrictions

To display SSH algorithms currently set on the Switch:

None.

| DGS3048#show ssh algorithm  |
|-----------------------------|
| Command: show ssh algorithm |
| Encryption Algorithm        |
| DES                         |
| 3DES                        |
| 3des-cbc                    |
| AES128<br>AES192            |
| AES256                      |
| RC4                         |
| Data Integrity Algorithm    |
| MD5                         |
| SHA1                        |
| Public Key Algorithm        |
| <br>RSA                     |
| DSA                         |
| DGS3048#                    |

#### SSL COMMANDS

Secure Sockets Layer or SSL is a security feature that will provide a secure communication path between a host and client through the use of authentication, digital signatures and encryption. These security functions are implemented through the use of a *ciphersuite*, which is a security string that determines the exact cryptographic parameters, specific encryption algorithms and key sizes to be used for an authentication session and consists of three levels:

- 1. **Key Exchange:** The first part of the cyphersuite string specifies the public key algorithm to be used. This switch utilizes the Rivest Shamir Adleman (RSA) public key algorithm and the Digital Signature Algorithm (DSA), specified here as the *DHE\_DSS* Diffie-Hellman (DHE) public key algorithm. This is the first authentication process between client and host as they "exchange keys" in looking for a match and therefore authentication to be accepted to negotiate encryptions on the following level.
- 2. **Encryption:** The second part of the ciphersuite that includes the encryption used for encrypting the messages sent between client and host. The Switch supports two types of cryptology algorithms:
  - Stream Ciphers There are two types of stream ciphers on the Switch, *RC4 with 40-bit keys* and *RC4 with 128-bit keys*. These keys are used to encrypt messages and need to be consistent between client and host for optimal use.
  - CBC Block Ciphers CBC refers to Cipher Block Chaining, which means that a portion of the previously encrypted block of encrypted text is used in the encryption of the current block. The Switch supports the *3DES\_EDE* encryption code defined by the Data Encryption Standard (DES) to create the encrypted text.
- 3. **Hash Algorithm**: This part of the ciphersuite allows the user to choose a message digest function which will determine a Message Authentication Code. This Message Authentication Code will be encrypted with a sent message to provide integrity and prevent against replay attacks. The Switch supports two hash algorithms, *MD5* (Message Digest 5) and *SHA* (Secure Hash Algorithm).

These three parameters are uniquely assembled in four choices on the Switch to create a three layered encryption code for secure communication between the server and the host. The user may implement any one or combination of the ciphersuites available, yet different ciphersuites will affect the security level and the performance of the secured connection. The information included in the ciphersuites is not included with the Switch and requires downloading from a third source in a file form called a *certificate*. This function of the Switch cannot be executed without the presence and implementation of the certificate file and can be downloaded to the Switch by utilizing a TFTP server. This Switch supports SSLv3 and TLSv1. Other versions of SSL may not be compatible with this Switch and may cause problems upon authentication and transfer of messages from client to host.

| Command                     | Parameters  |
|-----------------------------|---|
| enable ssl                  |   |
| disable ssl                 |   |
| show ssl                    | {certificate}   |
| show ssl cachetimeout       |   |
| crypto certificate generate | <number 1-2=""> generate {key-generate <length -="" 2048="" 512="">  cn <common- -="" 1="" 64="" name="">  ou <organization-unit -="" 1="" 64="">  or</organization-unit></common-></length></number>     |
|                             | <pre><organization -="" 1="" 64="">  loc <location -="" 1="" 64="">  st <state -="" 1="" 64="">  cu <country 1-2="">  duration <days 30-3650=""></days></country></state></location></organization></pre> |

| Command                               | Parameters   |
|---------------------------------------|--|
| crypto certificate                    | <number 1-2=""> request {cn <common- -="" 1="" 64="" name="">   ou <organization-unit -="" 1="" 64="">   or <organization -="" 1="" 64="">   loc <location -="" 1="" 64="">   st<state -="" 1="" 64="">   cu <country 1-2=""></country></state></location></organization></organization-unit></common-></number> |
| crypto certificate import             | <number 1-2=""> import</number>  |
| config ssl certificate                | <number 1-2=""></number>   |
| show crypto certificate mycertificate | {number 1-2}   |

Each command is listed, in detail, in the following sections.

| enable ssl   |   |
|--------------|---|
| Purpose      | To enable the SSL function on the Switch.   |
| Syntax       | enable ssl  |
| Description  | This command will enable SSL on the Switch by default implementing listed ciphersuites on the Switch. Enabling SSL will disable the web-manager on the Switch |
| Parameters   | None  |
| Restrictions | Only administrator-level users can issue this command.  |

#### Example usage:

To enable SSL on the Switch for all ciphersuites:

DGS3048#enable ssl Command:enable ssl

Note: Web will be disabled if SSL is enabled.

Success.

DGS3048#

**NOTE:** Enabling SSL on the Switch will enable all ciphersuites, upon initial configuration. To utilize a particular ciphersuite, the user must eliminate other ciphersuites by using the **disable ssl** command along with the appropriate ciphersuites.

**NOTE:** Enabling the SSL function on the Switch will disable the port for the web manager (port 80). To log on to the web based manager, the entry of your URL must begin with <a href="https://">https://10.90.90.90</a>)

| disable ssl |  |
|-------------|--|
| Purpose     | To disable the SSL function on the Switch. |
| Syntax      | disable ssl                                |

#### disable ssl

Description This command will disable SSL on the Switch.

Parameters None

Restrictions Only administrator-level users can issue this command.

#### Example usage:

To disable the SSL status on the Switch:

DGS3048#disable ssl

Command: disable ssl

Success.

DGS3048#

#### show ssl cachetimeout

Purpose Used to show the SSL cache timeout.

Syntax show ssl cachetimeout

Description Entering this command will allow the user to view the SSL cache

timeout currently implemented on the Switch.

Parameters None. Restrictions None.

#### Example usage:

To view the SSL cache timeout on the Switch:

DGS3048#show ssl cachetimeout

Command: show ssl cachetimeout

Cache timeout is 600 seconds.

DGS3048#

#### show ssl

Purpose Used to view the SSL status and the certificate file status on the

Switch.

Syntax show ssl

Description This command is used to view the SSL status on the Switch. Adding

the certificate parameter will allow the user to view the certificate file

information currently set on the Switch.

Parameters None

Restrictions None.

#### Example usage:

To view the SSL status on the Switch:

DGS3048#show ssl Command: show ssl

SSL status Disabled
RSA\_WITH\_RC4\_128\_MD5 0x0004 Enabled
RSA\_WITH\_3DES\_EDE\_CBC\_SHA 0x000A Enabled
RSA\_EXPORT\_WITH\_RC4\_40\_MD5 0x0003 Enabled

| crypto certi | ificate generate   |
|--------------|--|
| Purpose      | Used to generate a self-signed HTTPS certificate   |
| Syntax       | Crypto certificate generate <number 1-2=""> generate {key-generate <length -="" 2048="" 512="">  cn <common-name -="" 1="" 64="">  ou <organization-unit -="" 1="" 64="">  or<organization -="" 1="" 64="">  loc <location -="" 1="" 64="">  st <state -="" 1="" 64="">  cu <country 1-2="">  duration <days 30-3650=""></days></country></state></location></organization></organization-unit></common-name></length></number>  |
| Description  | This command allow administrator to generate a self-signed HTTPS certificate for device.   |
| Parameters   | number — Specifies the certificate number. (Range: 1 - 2)  key-generate — Regenerate the SSL RSA key.  length — Specifies the SSL RSA key length. (Range: 512 - 2048)  common-name — Specifies the fully qualified URL or IP address of the device.  (Range: 1 - 64)  organization — Specifies the organization name. (Range: 1 - 64)  organization-unit — Specifies the organization-unit or department name. (Range: 1 - 64)  location — Specifies the location or city name. (Range: 1 - 64)  state — Specifies the state or province name. (Range: 1 - 64)  country — Specifies the country name. (Range: 2 - 2)  days — Specifies number of days certification is valid. (Range: 30 - |
|              | 3650)  |

Usage Example:

Restrictions

To generate a self-signed HTTPS certificate:

DGS3048# crypto certificate 1 generate

Success.

DGS3048#

Only administrator-level users can issue this command.

| crypto certificate |   |  |
|--------------------|---|--|
| Purpose            | Used to generates and displays certificate requests for HTTPS.  |  |
| Syntax             | crypto certificate <number 1-2=""> request {cn <common- -="" 1="" 64="" name="">   ou <organization-unit -="" 1="" 64="">   or <organization -="" 1="" 64="">   loc <location -="" 1="" 64="">   st<state -="" 1="" 64="">   cu <country 1-2=""></country></state></location></organization></organization-unit></common-></number>   |  |
| Description        | Use this command to export a certificate request to a Certification Authority. The certificate request is generated in Base64-encoded X.509 format. Before generating a certificate request you must first generate a self-signed certificate using the <b>crypto certificate generate</b> Global Configuration mode command. Be aware that you have to reenter the certificate fields. After receiving the certificate from the Certification Authority, use the <b>crypto certificate import</b> Global Configuration mode command to import the certificate into the device. This certificate replaces the self-signed |  |

## crypto certificate

certificate.

Parameters number — Specifies the certificate number. (Range: 1 - 2)

common-name — Specifies the fully qualified URL or IP address of the

device.

(Range: 1-64)

organization-unit — Specifies the organization-unit or department name.

(Range: 1-64)

organization — Specifies the organization name. (Range: 1- 64)
location — Specifies the location or city name. (Range: 1- 64)
state — Specifies the state or province name. (Range: 1- 64)
country — Specifies the country name. (Range: 1- 2)

Restrictions Only administrator-level users can issue this command.

#### Usage Example:

To generates and displays certificate requests for HTTPS.:

DGS3048# crypto certificate 1 request

----BEGIN CERTIFICATE REQUEST-----

MIIBDTCBuAIBADBTMQswCQYDVQQGEwigIDEKMAgGA1UECBMBIDEKMAgGA1UEBxMB

----END CERTIFICATE REQUEST-----

Success.

**DGS3048#** 

| crypt | o cert | ificate | import |
|-------|--------|---------|--------|
|       |        |         |        |

Purpose Used to imports a certificate signed by the Certification Authority for

HTTPS.

Syntax crypto certificate <number 1-2> import

Description Use this command to enter an external certificate (signed by Certification

Authority) to the device. To end the session, enter an empty line. The imported certificate must be based on a certificate request created by the **crypto certificate request** Privileged EXEC mode command. If the public key found in the certificate does not match the device's SSL RSA key, the command fails. This command is not saved in the device configuration; however, the certificate imported by this command is saved in the private configuration (which is never displayed to the user or backed up to another

device).

Parameters number — Specifies the certificate number. (Range: 1 - 2)

Restrictions Only administrator-level users can issue this command.

#### Usage Example:

To import a certificate signed by the Certification Authority for HTTPS.:

DGS3048# crypto certificate 1 generate

Success.

DGS3048#

| config ssl certificate |   |  |
|------------------------|---|--|
| Purpose                | Used to configure the active certificate for HTTPS.       |  |
| Syntax                 | config ssl certificate <number 1-2=""></number>           |  |
| Description            | This command should be used to generate SSL certificates. |  |
| Parameters             | number — Specifies the certificate number. (Range: 1 - 2) |  |
| Restrictions           | Only administrator-level users can issue this command.    |  |

#### Usage Example:

To configure the active certificate for SSL:

| DGS3048#config ssl certificate 1 |  |
|----------------------------------|--|
|                                  |  |
| Sugges                           |  |
| Success.                         |  |
| DGS3048                          |  |

## Purpose Used to displays the SSH certificates of the device. Syntax show crypto certificate mycertificate {number 1-2} Description This command used to displays the SSH certificates of the device Parameters number — Specifies the certificate number. (Range: 1 - 2) Restrictions Only administrator-level users can issue this command.

#### Usage Example:

To show crypto certificate mycertificate:

#### DGS3048# show crypto certificate mycertificate

## TIME AND SNTP COMMANDS

The Simple Network Time Protocol (SNTP) (an adaptation of the Network Time Protocol (NTP)) commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command          | Parameters   |
|------------------|--|
| config sntp      | {primary <ipaddr>   secondary <ipaddr>   poll-interval <int 60-86400="">}</int></ipaddr></ipaddr>  |
| show sntp        |  |
| enable sntp      |  |
| disable sntp     |  |
| config time      | <date ddmmmyyyy=""> <time hh:mm:ss=""></time></date>   |
| config time-zone | {operator [+   -]   hour <gmt_hour 0-13="">   min<minute 0-59="">}</minute></gmt_hour>   |
| config dst       | [disable   repeating {week day month hh:mm week day month hh:mm   offset [30   60   90   120]}   annual {date month hh:mm date month hh:mm   offset [30   60   90   120]}] |
| show time        |  |

Each command is listed, in detail, in the following sections.

| config sntp  |  |  |
|--------------|--|--|
| Purpose      | Used to setup SNTP service.  |  |
| Syntax       | config sntp {primary <ipaddr>   secondary <ipaddr>   poll-interval <int<br>60-86400&gt;}</int<br></ipaddr></ipaddr>                      |  |
| Description  | Use this command to configure SNTP service from an SNTP server. SNTP must be enabled for this command to function (See enable sntp).     |  |
| Parameters   | primary – This is the primary server the SNTP information will be taken from.  |  |
|              | <ul> <li><ipaddr> – The IP address of the primary server.</ipaddr></li> </ul>  |  |
|              | secondary – This is the secondary server the SNTP information will be taken from in the event the primary server is unavailable.         |  |
|              | <ul> <li><ipaddr> – The IP address for the secondary server.</ipaddr></li> </ul>   |  |
|              | poll-interval – This is the interval between requests for updated SNTP information.  |  |
|              | <ul> <li><int 60-86400=""> – The polling interval ranges from 60 to 86,400 seconds. The default setting is 720 seconds.</int></li> </ul> |  |
| Restrictions | Only administrator-level users can issue this command. SNTP service must be enabled for this command to function (enable sntp).          |  |

#### Example usage:

To configure SNTP settings:

DGS3048#config sntp primary 10.1.1.1 secondary 10.1.1.2 poll-interval 60
Command: config sntp primary 10.1.1.1 secondary 10.1.1.2 poll-

#### DGS-3048 Layer 2 Switch CLI Reference Manual

interval 60
Success.
DGS3048#

show sntp

Purpose Used to display the SNTP information.

Syntax show sntp

Description This command will display SNTP settings information including the

source IP address, time and poll interval.

Parameters None.

Restrictions Only administrator-level users can issue this command.

Example usage:

To display SNTP configuration information:

DGS3048#show sntp

Command: show sntp

Current Time Source : System Clock

SNTP : Enabled

SNTPServer 1 : 10.1.1.1 SNTP Server 2: 10.1.1.2

SNTP Poll Interval : 60 sec

DGS3048#

enable sntp

Purpose Enables SNTP server support.

Syntax enable sntp

Description This will enable SNTP support. SNTP service must be separately

configured (see config sntp). Enabling and configuring SNTP support will

override any manually configured system time settings.

Parameters None.

Restrictions Only administrator-level users can issue this command. SNTP settings

must be configured for SNTP to function (config sntp).

Example usage:

To enable the SNTP function:

DGS3048#enable sntp

Command: enable sntp

Success.

#### DGS-3048 Layer 2 Switch CLI Reference Manual

DGS3048#

# Purpose Disables SNTP server support. Syntax disable sntp Description This will disable SNTP support. SNTP service must be separately configured (see config sntp). Parameters None. Restrictions Only administrator-level users can issue this command.

#### Example:

To stop SNTP support:

DGS3048#disable sntp
Command: disable sntp
Success.

| config time  |   |
|--------------|---|
| Purpose      | Used to manually configure system time and date settings.   |
| Syntax       | config time date <date ddmthyyyy=""> <time hh:mm:ss=""></time></date>   |
| Description  | This will configure the system time and date settings. These will be overridden if SNTP is configured and enabled.  |
| Parameters   | date – Express the date using two numerical characters for the day of the month, three alphabetical characters for the name of the month, and four numerical characters for the year. For example: 03aug2003. |
|              | time – Express the system time using the format hh:mm:ss, that is, two numerical characters each for the hour using a 24-hour clock, the minute and second. For example: 19:42:30.                            |
| Restrictions | Only administrator-level users can issue this command. Manually configured system time and date settings are overridden if SNTP support is enabled.   |

#### Example usage:

To manually set system time and date settings:

DGS3048#config time 30062003 16:30:30 Command: config time 30062003 16:30:30

Success.

DGS3048#

| config time_zone |   |  |
|------------------|---|--|
| Purpose          | Used to determine the time zone used in order to adjust the system clock.   |  |
| Syntax           | config time_zone {operator [+   -]   hour <gmt_hour 0-13="">   min <minute 0-59="">}</minute></gmt_hour>                        |  |
| Description      | This will adjust system clock settings according to the time zone. Time zone settings will adjust SNTP information accordingly. |  |
| Parameters       | operator – Choose to add (+) or subtract (-) time to adjust for time zone relative to GMT.                                      |  |
|                  | hour – Select the number hours offset from GMT (Greenwich Mean Time).   |  |
|                  | <i>min</i> – Select the number of minutes difference added or subtracted to adjust the time zone.                               |  |
| Restrictions     | Only administrator-level users can issue this command.  |  |

#### Example usage:

To configure time zone settings:

DGS3048#config time\_zone operator + hour 2 min 30 Command: config time\_zone operator + hour 2 min 30

Success.

| config dst  |  |
|-------------|--|
| Purpose     | Used to enable and configure time adjustments to allow for the use of Daylight Savings Time (DST).   |
| Syntax      | config dst [disable   repeating {week day month hh:mm week day month hh:mm   offset [30   60   90   120]}   annual {date month hh:mm date month hh:mm   offset [30   60   90   120]}]  |
| Description | DST can be enabled and configured using this command. When enabled this will adjust the system clock to comply with any DST requirement. DST adjustment effects system time for both manually configured time and time set using SNTP service.   |
| Parameters  | disable - Disable the DST seasonal time adjustment for the Switch.   |
|             | repeating - Using repeating mode will enable DST seasonal time adjustment. Repeating mode requires that the DST beginning and ending date be specified using a formula. For example, specify to begin DST on Saturday during the second week of April and end DST on Sunday during the last week of October. |
|             | annual - Using annual mode will enable DST seasonal time adjustment. Annual mode requires that the DST beginning and ending date be specified concisely. For example, specify to begin DST on April 3 and end DST on October 14.   |
|             | s_week - Configure the week of the month in which DST begins.  |
|             | <ul> <li><start_week 1-4,last=""> - The number of the week during the month<br/>in which DST begins where 1 is the first week, 2 is the second<br/>week and so on, last is the last week of the month.</start_week></li> </ul>   |
|             | e_week - Configure the week of the month in which DST ends.  |
|             | <ul> <li><end_week 1-4,last=""> - The number of the week during the month<br/>in which DST ends where 1 is the first week, 2 is the second week<br/>and so on, last is the last week of the month.</end_week></li> </ul>   |
|             | $s_day$ – Configure the day of the week in which DST begins.   |
|             | <ul> <li><start_day sun-sat=""> - The day of the week in which DST begins expressed using a three character abbreviation (sun, mon, tue, wed, thu, fri, sat)</start_day></li> </ul>  |
|             | e_day - Configure the day of the week in which DST ends.   |
|             | <ul> <li><end_day sun-sat=""> - The day of the week in which DST ends<br/>expressed using a three character abbreviation (sun, mon, tue,<br/>wed, thu, fri, sat)</end_day></li> </ul>  |
|             | s_mth - Configure the month in which DST begins.   |
|             | <ul> <li><start_mth 1-12=""> - The month to begin DST expressed as a<br/>number.</start_mth></li> </ul>  |
|             | e_mth - Configure the month in which DST ends.   |
|             | <ul> <li><end_mth 1-12=""> - The month to end DST expressed as a<br/>number.</end_mth></li> </ul>  |
|             | s_time - Configure the time of day to begin DST.   |
|             | <ul> <li><start_time hh:mm=""> - Time is expressed using a 24-hour clock, in<br/>hours and minutes.</start_time></li> </ul>  |

| config dst   |   |
|--------------|---|
|              | e_time - Configure the time of day to end DST.  |
|              | <ul> <li><end_time hh:mm=""> - Time is expressed using a 24-hour clock, in<br/>hours and minutes.</end_time></li> </ul>   |
|              | s_date - Configure the specific date (day of the month) to begin DST.   |
|              | <ul> <li><start_date 1-31=""> - The start date is expressed numerically.</start_date></li> </ul>  |
|              | e_date - Configure the specific date (day of the month) to begin DST.   |
|              | <ul> <li><end_date 1-31=""> - The end date is expressed numerically.</end_date></li> </ul>  |
|              | offset $[30 \mid 60 \mid 90 \mid 120]$ - Indicates number of minutes to add or to subtract during the summertime. The possible offset times are 30, 60, 90, 120. The default value is 60. |
| Restrictions | Only administrator-level users can issue this command.  |

#### Example usage:

To configure daylight savings time on the Switch:

DGS3048# config dst repeating s\_week 2 s\_day tue s\_mth 4 s\_time 15:00 e\_week 2 e\_day wed e\_mth 10 e\_time 15:30 offset 30 Command: config dst repeating s\_week 2 s\_day tue s\_mth 4 s\_time 15:00 e\_week 2 e\_day wed e\_mth 10 e\_time 15:30 offset 30

Success.

DGS3048#

| show time    |  |
|--------------|--|
| Purpose      | Used to display the current time settings and status.  |
| Syntax       | show time  |
| Description  | This will display system time and date configuration as well as display current system time. |
| Parameters   | None.  |
| Restrictions | Only administrator-level users can issue this command.                                       |

#### Example usage:

To show the time settings:

#### DGS-3048 Layer 2 Switch CLI Reference Manual

DGS3048#show time

Command: show time

Current Time Source : System Clock
Boot Time : 01 Jul 2003 01:03:41
Current Time : 01 Jul 2003 01:43:41

Time Zone : GMT +02:30 Daylight Saving Time : Repeating

Offset in Minutes : 30

Repeating From : Apr 2nd Tue 15:00

To : Oct 2nd Wed 15:30

Annual From : 29 Apr 00:00

To : 12 Oct 00:00

23

## ROUTING TABLE COMMANDS

The routing table commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command        | Parameters   |
|----------------|--|
| create iproute | [default] <ipaddr> {<metric 1-65535="">}</metric></ipaddr> |
| delete iproute | [default]  |
| show iproute   |  |

Each command is listed, in detail, in the following sections.

| create iproute |  |  |
|----------------|--|--|
| Purpose        | Used to create IP route entries to the Switch's IP routing table.  |  |
| Syntax         | create iproute [default] <ipaddr> {<metric 1-65535="">}</metric></ipaddr>  |  |
| Description    | This command is used to create a default static IP route entry to the Switch's IP routing table.   |  |
| Parameters     | <pre><ipaddr> - The gateway IP address for the next hop router.</ipaddr></pre>   |  |
|                | <metric 1-65535=""> – Allows the entry of a routing protocol metric entry representing the number of routers between the Switch and the IP address above. The default setting is 1.</metric> |  |
| Restrictions   | Only administrator-level users can issue this command.   |  |

#### Example Usage:

To add the default static address 10.48.74.121, with a metric setting of 1, to the routing table:

DGS3048#create iproute default 10.48.74.121 1
Command: create iproute default 10.48.74.121 1
Success.
DGS3048#

| delete iproute default |  |  |  |
|------------------------|--|--|--|
| Purpose                | Used to delete a default IP route entry from the Switch's IP routing table.            |  |  |
| Syntax                 | delete iproute [default]   |  |  |
| Description            | This command will delete an existing default entry from the Switch's IP routing table. |  |  |
| Parameters             | None.  |  |  |
| Restrictions           | Only administrator-level users can issue this command.                                 |  |  |

#### Example usage:

To delete the default IP route 10.53.13.254:

DGS3048#delete iproute default 10.53.13.254 Command: delete iproute default 10.53.13.254

Success.

DGS3048#

| show iproute |   |
|--------------|---|
| Purpose      | Used to display the Switch's current IP routing table.  |
| Syntax       | show iproute { <network address="">} {static}</network>   |
| Description  | This command will display the Switch's current IP routing table.  |
| Parameters   | network address – IP address and netmask of the IP interface that is the destination of the route. The address and mask information may be specified by using the traditional format (for example, 10.1.2.3/255.0.0.0 or in CIDR format, 10.1.2.3/8). |
|              | static - Use this parameter to display static iproute entries.  |
| Restrictions | None.   |

#### Example Usage:

To display the contents of the IP routing table:

| DGS3048#show iprou | te           |           |      |          |
|--------------------|--------------|-----------|------|----------|
| Command: show ipro | ute          |           |      |          |
| Routing Table      |              |           |      |          |
| IP Address/Netmask | Gateway      | Interface | Hops | Protocol |
| 0.0.0.0            | 10.1.1.254   | System    | 1    | Default  |
| 10.0.0.0/8         | 10.48.74.122 | System    | 1    | Local    |
| Total Entries: 2   |              |           |      |          |
| DGS3048#           |              |           |      |          |

24

## ARP COMMANDS

The ARP commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command               | Parameters   |
|-----------------------|--|
| create arpentry       | <ipaddr> <macaddr></macaddr></ipaddr>                |
| config arpentry       | <ipaddr> <macaddr></macaddr></ipaddr>                |
| delete arpentry       | [ <ipaddr>   all]</ipaddr>                           |
| show arpentry         | {ipif system   ipaddress <ipaddr>   static}</ipaddr> |
| config arp_aging time | <value 1-="" 65535=""></value>                       |
| clear arptable        |  |

Each command is listed, in detail, in the following sections.

| create arpentry |  |
|-----------------|--|
| Purpose         | Used to make a static entry into the ARP table.  |
| Syntax          | create arpentry <ipaddr> <macaddr></macaddr></ipaddr>  |
| Description     | This command is used to enter an IP address and the corresponding MAC address into the Switch's ARP table. |
| Parameters      | <pre><ipaddr> - The IP address of the end node or station.</ipaddr></pre>                                  |
|                 | <macaddr> – The MAC address corresponding to the IP address above.</macaddr>                               |
| Restrictions    | Only administrator-level users can issue this command.   |

#### Example Usage:

To create a static ARP entry for the IP address 10.48.74.121 and MAC address 00:50:BA:00:07:36:

DGS3048#create arpentry 10.48.74.121 00-50-BA-00-07-36
Command: create arpentry 10.48.74.121 00-50-BA-00-07-36
Success.
DGS3048#

| config arpentry |   |  |
|-----------------|---|--|
| Purpose         | Used to configure a static entry in the ARP table.  |  |
| Syntax          | config arpentry <ipaddr> <macaddr></macaddr></ipaddr>   |  |
| Description     | This command is used to configure a static entry in the ARP Table. The user may specify the IP address and the corresponding MAC address of an entry in the Switch's ARP table. |  |
| Parameters      | <pre><ipaddr> - The IP address of the end node or station.</ipaddr></pre>   |  |
|                 | <macaddr> – The MAC address corresponding to the IP address above.</macaddr>  |  |
| Restrictions    | Only administrator-level users can issue this command.  |  |

#### Example Usage:

To configure a static ARP entry for the IP address 10.48.74.12 and MAC address 00:50:BA:00:07:36:

DGS3048#config arpentry 10.48.74.12 00-50-BA-00-07-36 Command: config arpentry 10.48.74.12 00-50-BA-00-07-36 Success.

DGS3048#

| delete arpentry |   |
|-----------------|---|
| Purpose         | Used to delete a static entry into the ARP table.   |
| Syntax          | delete arpentry { <ipaddr>   all}</ipaddr>  |
| Description     | This command is used to delete a static ARP entry, made using the <b>create arpentry</b> command above, by specifying either the IP address of the entry or all. Specifying <i>all</i> clears the Switch's ARP table. |
| Parameters      | <pre><ipaddr> - The IP address of the end node or station.</ipaddr></pre>   |
|                 | all – Deletes all ARP entries.  |
| Restrictions    | Only administrator-level users can issue this command.  |

#### Example Usage:

To delete an entry of IP address 10.48.74.121 from the ARP table:

DGS3048#delete arpentry 10.48.74.121 Command: delete arpentry 10.48.74.121

Success.

## config arp\_aging time

Purpose Used to configure the age-out timer for ARP table entries on the

Switch.

Syntax config arp\_aging time <value 1- 65535 >

Description This command sets the maximum amount of time, in minutes, that

an ARP entry can remain in the Switch's ARP table, without being

accessed, before it is dropped from the table.

Parameters time < value 1- 65535> - The ARP age-out time, in minutes. The

value may be set in the range of 1-65535 minutes with a default

setting of 20 minutes.

Restrictions Only administrator-level users can issue this command.

#### Example Usage:

To configure ARP aging time:

DGS3048#config arp\_aging time 30

Command: 30

Success.

DGS3048#

|              |     |      |     | . 4 . |
|--------------|-----|------|-----|-------|
| er           | ION | ı ar | 'ne | ntrv  |
| $\mathbf{O}$ |     | C.I. |     |       |

Purpose Used to display the ARP table.

Syntax show arpentry (ipif system | ipaddress <ipaddr> | static)

Description This command is used to display the current contents of the

Switch's ARP table.

Parameters <ipaddr> – The network address corresponding to the IP interface

name above.

static - Displays the static entries to the ARP table.

Restrictions None.

#### Example Usage:

To display the ARP table:

DGS3048#show arpentry Command: show arpentry

**ARP Aging Time: 20**

### **COMMAND HISTORY LIST**

The command history list commands in the Command Line Interface (CLI) are listed (along with the appropriate parameters) in the following table.

| Command                | Parameters                |
|------------------------|---------------------------|
| ?                      |                           |
| show command_history   |                           |
| dir                    |                           |
| config command_history | <value 10-237=""></value> |

Each command is listed, in detail, in the following sections.

| ?            |  |
|--------------|--|
| Purpose      | Used to display all commands in the Command Line Interface (CLI).  |
| Syntax       | ? { <command/> }   |
| Description  | This command will display all of the commands available through the Command Line Interface (CLI).  |
| Parameters   | <command/> - Entering the question mark with an appropriate command will list all the corresponding parameters for the specified command, along with a brief description of the commands function and similar commands having the same words in the command. |
| Restrictions | None.  |

Example usage

To display all of the commands in the CLI:

```
DGS3048#?
Command: ?
?
clear
clear arptable
clear counters
clear fdb
clear log
config 802.1p default_priority
config 802.1p user_priority
config 802.1x auth_parameter ports
config 802.1x auth_protocol
config 802.1x capability ports
config 802.1x init
config 802.1x reauth
config account
config admin local_enable
config arp_aging time
config arpentry
```

config authen application config authen parameter attempt config authen parameter response\_timeout config authen server group

More: <space>, Quit: q, One line: <return>

#### Example usage:

To display the parameters for a specific command:

DGS3048#? config igmp\_snooping Command: config igmp\_snooping

Command: config igmp\_snooping

Usage: [<vlan\_name 32> | all] {host\_timeout <sec 1-16711450> | router\_timeout <sec 1-16711450> | leave\_timer <sec 0-16711450> | state [enable | disable]}

Description: Used to configure IGMP snooping on the switch.

config igmp snooping querier

DGS3048#

#### show command\_history

Purpose Used to display the command history.

Syntax show command\_history

Description This command will display the command history.

Parameters None.
Restrictions None.

Example usage

To display the command history:

DGS3048#show command\_history Command: show command history

?

? show show vlan

config router\_ports vlan2 add 1:1-1:10

config router\_ports vlan2 add config router\_ports vlan2

config router\_ports

show vlan

create vlan vlan2 tag 3 create vlan vlan2 tag 2 show router\_ports show router ports login

| dir          |   |
|--------------|---|
| Purpose      | Used to display all commands.           |
| Syntax       | dir                                     |
| Description  | This command will display all commands. |
| Parameters   | None.                                   |
| Restrictions | None.                                   |

Example usage

To display all of the commands:

```
DGS3048#dir
Command: dir
?
clear
clear arptable
clear counters
clear fdb
clear log
config 802.1p default_priority
config 802.1p user_priority
config 802.1x auth_parameter ports
config 802.1x auth_protocol
config 802.1x capability ports
config 802.1x init
config 802.1x reauth
config account
config admin local_enable
config arp_aging time
config arpentry
config authen application
config authen parameter attempt
config authen parameter response_timeout
config authen server group
 More: <space>, Quit: q, One line: <return>
```

| config command_history |   |
|------------------------|---|
| Purpose                | Used to configure the command history.  |
| Syntax                 | config command_history <value 10-237=""></value>  |
| Description            | This command is used to configure the command history.  |
| Parameters             | <10-237> – The number of previously executed commands maintained in the buffer. Up to 40 of the latest executed commands may be viewed. |
| Restrictions           | None.   |

Example usage

To configure the command history:

#### DGS-3048 Layer 2 Switch CLI Reference Manual

| DGS3048#config command_history 20 Command: config command_history 20 |  |
|--|--|
| Success.   |  |
| DGS3048#   |  |
