## **Revision History and System Requirement:**

### **Important Notes:**

dlink

1. A firmware region mismatch between RU and WW images now is forbidden. System will check

and block firmware upgrade process, such as firmware upgrade from RU  $\rightarrow$  WW or WW  $\rightarrow$  RU image.

2. Below are new functions and will be available after upgrading FW to v4.2.0.3 or later.

**Website Filter** feature (Content Filtering/ Approved URLs/ Blocked Keywords/ Export) needs DWC-1000-VPN/ DWC-1000-VPN-LIC license upgrade.

**Category Filtering** feature needs DWC-1000-WCF-12 or DWC-1000-WCF-12-LIC license upgrade.

# Notes for Configuration Auto-Backup/Restore in USB Storage:

D-Link DWC Unified Controller support configuration backup or restore automatically while a USB drive is inserted. Following information instructs what condition will perform backup/restore.

- The configuration will be automatically backed up to the USB drive as soon as the USB drive is inserted. The back name has format <Model Name>\_<Serial Number>.cfg provided this USB drive doesn't have a backup configuration file from a DWC already present.
- 2. The system LED on the DWC blinks 3X in amber to indicate a backup operation has started.
- 3. The configuration in the USB drive can be updated if the user manually clicks 'Save Settings'

in any GUI page and provided the Model Number and the Serial Number of the DWC matches with the file already present in the USB drive.

- 4. In case of reboot, the DWC checks for the presence of configuration file (with format ModelName\_SerialNumber.cfg). If found, the configuration from the USB drive is restored on the DWC. If a configuration file with the correct format is present in both connected USB drives, the configuration from the first USB drive will be used to restore the DWC.
- 5. The USB drive can have only one configuration with the above mentioned format for each model name.
- 6. If the USB drive is plugged in to the DWC which is in factory default state, then during reboot, no backup is taken since no custom configuration file exists in the DWC by that time. The custom configuration is stored on the USB drive once the user clicks Save Settings in any GUI page.
